*Work undertaken by:* Thames Valley Archaeological Services

An assessment was carried out at the reservoir site in response to an application for redevelopment. It was concluded that the excavation of the reservoir basin would have seriously truncated archaeological remains, however the retaining banks may have preserved some remains. Adjacent to the site were archaeological remains such as a Roman camp and the Roman road Ermin Street. [Au(abr)]

The assessment was carried out in advance of proposed redevelopment of the site, which contained a petrol station. The site lay within a landscape containing various archaeological remains and was also within a Scheduled Ancient Monument. The results revealed that the site has been subject to considerable modern disturbance and previous archaeological recording had revealed no significant archaeology. It therefore seems likely that the site did not contain any significant archaeological deposits. [Au(adp)]

An archaeological assessment was carried out on the proposed development site. The assessment identified that the site lay close to an area which was known to contain substantial Iron Age/Romano-British, Saxon and medieval settlements. The site was identified as being pasture land for many years and may only have potential for archaeology associated with the Roman Road which was to the front of the site. [Au(abr)]

An archaeological assessment was carried out on the proposed pipeline route. The assessment identified that the pipeline would pass through and close to known Roman archaeological remains and also a 19th century model farm. The pipeline would also pass through Aldenham Park, which was an English Heritage registered park. [Au(abr)]

An archaeological assessment was carried out on the proposed development site and identified that it had a low potential for archaeology. Apart from the site containing a mansion house of late 18th century origin the only archaeology known in the vicinity was a single mesolithic flake and a tenuous Roman settlement. [Au(abr)]

An archaeological assessment was carried out on the proposed development site. The assessment identified that there was potential for archaeology from the prehistoric to the post-medieval period. The site occupied medieval burgrave plots and evidence for ancillary buildings and back plot activity may be present. [Au(abr)]
