PO30 4HT**BOWCOMBE FARM BUSINESS PARK*****Bowcombe Farm Business Park. A Desk-Top Assessment of the Archaeological Potential***

Trott, K Newport : Kevin Trott Archaeological Services, 2003, 22pp, figs, refs

Work undertaken by: Kevin Trott Archaeological Services

The desk-based assessment revealed that the proposed development area occupied a site that claimed a significant position in the overall history of the Isle of Wight. Archaeological investigation within the proposed development area may confirm the presence of Roman structures first observed in 1941. These could occupy a focal position within a complex of related sites lying in the adjoining fields. Prehistoric and Medieval activities may also be encountered. [Au(adp)]

PO30 5TU**CHAWTON LANE, NORTHWOOD*****Chawton Lane, Northwood. A Desktop Assessment of the Archaeological Potential***

Stevens, K Newport : Kevin Trott Archaeological Services, 2003, 15pp, figs, refs

Work undertaken by: Kevin Trott Archaeological Services

Desk-based assessment revealed that the proposed development area occupied a site that could claim a significant position in the overall history of the Isle of Wight. Archaeological investigation within the proposed development area may also have confirmed the presence of probable house platforms situated within the north-western area of the proposed development site, and any possible relation to sites within Chawton to adjoining fields. All of the assessed evidence suggested that the proposed development area may have been situated on, or adjacent to, various sites that were archaeologically important to the settlement history of the Northwood environs and the Isle of Wight. Bashford, D Oxford : Oxford Archaeology, 2003, 20pp, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The desk-based assessment showed that although the parks contained no known pre-post-medieval archaeological sites identified on the SMR, the park, due to its topographical and geological attributes, does have the potential to contain archaeological remains associated with its agricultural use in the Bronze Age to Roman period. Such remains may take the form of field boundaries or even perhaps evidence for settlement. [Au(adp)]
