Work undertaken by: Oxford Archaeology

The proposed development area had a very high potential to include archaeological features and deposits of the mid-Iron Age to the mid-Roman period, based on the evidence of excavations to the east and crop marks within the proposed development area itself. The proposed development area had a moderate potential to include archaeological features of the later medieval and post-medieval periods. [Au(abr)]

Work undertaken by: Oxford Archaeology

An archaeological assessment was carried out on the proposed development site and identified that the development may have an impact on a Grade II Listed Building and an English Heritage registered Battlefield. The development would also impact on the environs of the post-medieval Nunn mill and any features related to the medieval mill and bridge. The assessment also established the potential for archaeology from the palaeolithic to the medieval period buried below alluvial deposits. Palaeoenvironmental deposits were also identified as being possibly present. [Au(abr)]
