Work undertaken by: Surrey County Archaeological Unit

The proposed development area had undergone two large scale developments in the latter part of the 20th century. The absence of archaeological information from within the present site, was likely to be due to the lack of archaeological survey during the earlier phases of development as to an absence of earlier human activity in the vicinity of the site. The general archaeological potential of the area was regarded as good. [Au(adp)]

Epsom and Ewell

Hunt, G & Young, J London : L-P:Archaeology, 2003, 51pp, figs, tabs, refs

Work undertaken by: L-P: Archaeology

The site was close to the known location of a Roman villa. Previous excavations adjacent to the area have revealed significant Roman remains. These included a second century cremation cemetery and a later building phase. Trenching within the study area has also revealed Roman remains. In addition, there was some potential for previously undiscovered prehistoric and medieval remains. Other than this there was generally a low level of archaeological activity. The evidence suggested that there was a high potential for significant archaeological remains on this site. [Au(abr)]

Shaikhley, N Woking : Surrey County Archaeological Unit, 2003, 23pp, figs, refs

Work undertaken by: Surrey County Archaeological Unit

A significant amount of archaeological material had been recovered from the surrounding area. The archaeology of the area mainly referred to sites or finds from the prehistoric or Roman periods. This evidence pointed to the prehistoric and Roman periods as having the highest potential. The situation for the Saxon period was less clear, but the settlement pattern for the medieval and post-medieval periods was well attested, and it seemed relatively unlikely that major unknown sites of those dates lay within the borrow pit areas. [Au(adp)]
