Roberts, B Hertford : Archaeological Solutions, 2003, 26pp, colour pls, figs, refs

Work undertaken by: Archaeological Solutions

The assessment revealed the potential of archaeological deposits within the study area was low. The buildings on site are post-medieval and modern in date. The site appears to have remained open fields during the medieval and post-medieval periods. [Au(adp)]

Barber, B & Leverett, M Salisbury : Wessex Archaeology, 2003, 43pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

An assessment was carried out in response to proposals for a new housing development at the site. Low potential for archaeological finds before the medieval period was identified. The site was thought to contain remains relating to the medieval St. Batholomew's Hospital, founded before 1215. These would be considered both locally and nationally important. Post-medieval remains were thought to be fragmentary and less important. [Au(abr)]

Morton, R Cirencester : Cotswold Archaeology, 2003, 31pp, pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

An assessment in advance of a new development demonstrated that there was significant potential for the discovery of Mesolithic settlement in the area, with the possibility of in situ remains. [Au(abr)]
