Cowan, C London : Museum of London Archaeology Service, 2003, 24pp, figs, refs

Work undertaken by: Museum of London Archaeology Service

The presence of prehistoric settlement to the east of the site, including oval enclosures, a double-ditched linear feature and a hut circle in the form of crop marks during air photography, together with many finds of flint flakes, indicated that the site lay in an area of high archaeological potential for remains dating from the prehistoric period. It was suggested that further trial work concentrate on the eastern part of the site. [Au(abr)]

Work undertaken by: Wessex Archaeology

An assessment into the history of the site identified the potential for Paleolithic finds and that a complex series of crop marks representing Roman and later prehistoric settlement lay partly within the site. Medieval open fields were later converted by Parliamentary Enclosure. Many of the enclosure boundaries were later removed. [Au(abr)]

Work undertaken by: John Moore Heritage Services

The proximity of prehistoric remains and potential multi-period settlement activity identified from aerial photographic survey placed the main foci of activity around the rivers. This suggested that the potential for prehistoric remains within the proposed development area was low. This was also true for potential occurrence of medieval remains. The development appeared to be situated within an area of predominantly open pasture with a few small fields and a series of garden plots to the rear. [Au(abr)]
