Harris, E C Leeds : EC Harris, 2003, 104pp, figs, tabs, refs
Work undertaken by: EC Harris

A desk top study was carried out on the proposed development site. Previous assessments, test pitting and bore holes identified 1 to 2m of modern deposits over natural alluvial, which although of medieval date, contained no artefactual material. A Roman harbour was indentified in the river just outside the development area but no evidence was identified for it continuing into the development area. The only known archaeology on the site was that of a Roman Road. [Au(abr)]
