Roy, M Chelmsford : Essex County Council Field Archaeology Unit, 2003, 12pp, figs, tabs

Work undertaken by: Essex County Council Field Archaeology Unit

Two trenches were investigated in the south-west of the site. A single east-west boundary feature was identified in the western trench which was probably evidence of land division in the Late Bronze Age or Early Iron Age. No other deposits or features of archaeological significance were encountered and it was concluded that the development area holds little further potential. [Au(abr)]

Haslam, A London : Pre-Construct Archaeology Ltd., 2003, 22pp, figs, tabs

Work undertaken by: Pre-Construct Archaeology Ltd.

Three trenches were arranged across the site. Trench one revealed made ground overlying a natural river silt deposit. Trench 2 revealed only made ground. Trench 3 revealed made ground overlying an alluvial deposit. The evidence for the earliest human activity on the site composed of fragments of burnt flint in the Trench 3 organic-rich alluvial deposit. It was therefore believed that this deposit may have represented marshy ground in the immediate vicinity of a prehistoric settlement or other activities. It was recommended the site be assessed for its ability to date and identify the nature of the environment and local human activity. [Au(adp)]

Work undertaken by: Archaeological Solutions

The evaluation revealed the site had been used as the backyards for houses facing the main road during the 19th century. Two probable 19th century pits suggested quarrying and waste disposal in the back plots of Kentish Town Road. Buildings, known from cartographic evidence, were constructed towards the rear of the plots prior to 1870, though no direct evidence of these was uncovered. A garage block was subsequently erected on the site prior to 1952, and recently demolished as part of this development. [Au(abr)]

Work undertaken by: Museum of London Archaeology Service

Four evaluation trenches were excavated on the site. Several garden features relating to the late 19th century hospital grounds were identified. Several irregular features holding packed chalk cobble foundations cut the natural clay. The features formed a roughly rectangular structure. The structure remains undated but was likely to be medieval, and possibly agricultural in nature. A ditch interpreted as a field boundary dating to c. 1840 truncated the masonry footings. The ditch was backfilled between the construction of the Waddon Fever Hospital and its demolition in the 1990s. Although the impact of the development was considered low, a programme of recording by watching brief was recommended.

THE ROYAL ARSENAL, WOOLISCH

The Royal Arsenal, Woolwich. Area of Former Building 50

Wilkinson, D & Davies, T Oxford : Oxford Archaeology, 2003, 78pp, figs, tabs, refs
Work undertaken by: Oxford Archaeology

A field evaluation at the former building 50 site encountered a series of small scale, successive timber stake and wattle structures inland from the current line of the Thames River Wall. This was dated to the medieval periods from C14 evidence. They were considered to represent former fence lines, possibly fish traps, and the possible foundations to an earthen River Wall, which was observed to overlie these structures. Two ditches were encountered and these were considered to be contemporary elements of the network of drainage ditches. The well preserved remains of the Proof House were recorded. Nineteenth century land reclamation works in the form of a channels, brick culverts and timber pilings were also recorded. [Au(adp)]

69 MAIN ROAD, GIDEA PARK, ROMFORD

69 Main Road, Gidea Park, Romford, Greater London. Archaeological Evaluation by Trial Trenching

Roy, M Chelmsford : Essex County Council Field Archaeology Unit, 2003, 13pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

A single, undated, possible boundary ditch was visible. No remains associated with the Roman road or contemporary activity were located. It was thought likely that the course of this thoroughfare lied outside the development area, though it was also possible that it may have been destroyed during the construction of a residence in the southern end of the site in the late 19th century. No other deposits or features of archaeological significance were encountered and it was concluded that the development held no further potential. [Au(abr)]

Work undertaken by: Essex County Council Field Archaeology Unit

Twenty-seven trenches were excavated. Several archaeological features were encountered, the majority defining two concentrations of remains. The north-west corner of the field contained a trackway, dated by material retrieved from its ditches to the prehistoric period, continuing into the Roman period, and three small pits containing burnt material, one of which was dated as early Iron Age. The other concentration was in the south-west corner of the field, consisting of several ditches and four small pits. The only dating evidence came from the two ditches, in the form of medieval material. [Au(adp)]

An Archaeological Evaluation at Former Panasonic Depot, Spring Gardens, Romford. London Borough of Havering

Adams, S Twickenham : AOC Archaeology Group, 2003, 21pp, figs, tabs, refs
Work undertaken by: AOC Archaeology Group

Three trial trenches were excavated. A linear post-medieval feature ran the length of trench one. In trench three, one post-medieval post hole cut the current subsoil which overlaid a Roman subsoil. The abraded and sparse nature of finds in the Roman subsoil indicated it may have been cultivated and therefore this was the site of Roman fields. No features relating to the Roman period were found nor did the site contain any evidence of medieval activity. [Au(abr)]

Wragg, E London : Pre-Construct Archaeology Ltd., 2003, 52pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

The archaeological programme consisted of the excavation and recording of fifteen archaeological test pits. Three palaeochannels were sealed by a "hill wash" deposit. A number of prehistoric linear features including a possible ring ditch were recorded cutting this deposit and a smaller number of post-medieval agricultural features likewise cut into it. These features were sealed by a post-medieval ploughsoil, which was in turn, overlain by layers of made ground associated with the construction of an iron church and its replacement built of brick. Two features were identified as possibly being associated with the iron church while a series of walls (internal and external), supports for floors, floor surfaces themselves and sewers were recorded as belonging to the brick church. Land to the Rear of the Bull Public House, 32 Church Road, Mitcham CR4. London Borough of Merton. An Archaeological Evaluation

Compass Archaeology Limited London : Compass Archaeology, 2003, 29pp, colour pls, figs, tabs, refs

Work undertaken by: Compass Archaeology

Two test pits produced mainly 18th century finds, plus a few residual sherds of medieval pot over a sterile subsoil. One find of note, albeit a fairly modern layer, was an apparently complete millstone some 0.86m in diameter. It was suggested that there was no need for any further archaeological measure in relation to the proposed development. [Au(abr)]

Work undertaken by: Museum of London Archaeology Service

Additional trial trenching was carried out on the site. Further features of the type observed in the earlier phase of evaluation were uncovered. Two pieces of Saxon pottery were recovered from a feature of natural origin. Burnt flint fragments of possible prehistoric date were observed in a thin layer, which appeared to overlie the features and was sealed by a post-medieval ploughsoil. The evaluation has shown there was a potential for the survival of cut features. However, the absence of valid dating material suggested the features did not belong to a site of archaeological significance. [Au(abr)]

Hickling, S Chelmsford : Essex County Council Field Archaeology Unit, 2003, 17pp, figs, tabs
Work undertaken by: Essex County Council Field Archaeology Unit

Several pits of Victorian or later date were uncovered, cut through an earlier ploughsoil and subsoil. Three features, a gully and two pits, were undated, but the pale colour of their fills and the fact that they were overlain by the ploughsoils, suggest that they could be considerably earlier than the other features. The gully was aligned perpendicular to the Oliver road, suggesting that it may be associated with the pre-suburban development field system. [Au(abr)]
