Work undertaken by: Archaeological Services WYAS

The evaluation was carried out in advance of a proposed development of a motorcycle showroom. A continuation of the field system located in previous archaeological work on the nearby B&Q site was identified to the east of the site. Finds included: daub, a glass bangle fragment, pottery sherds and animal bones suggested later prehistoric settlement activity in the vicinity, although no structures were identified. [Au(adp)]

Gearey, B & Chapman, H Hull : WAERC, 2003, 21pp, figs, refs

Work undertaken by: Wetland Archaeology & Environments Research Centre

The sediments found during the coring comprised extensive spreads of sand and gravel overlain by clay. It was suggested that these sediments were deposited as a result of glacial and riverine landscape processes over 10,000 years ago. No organic sediments which could preserve evidence of prehistoric and historic activities and assist in the reconstruction of long term changes in the environment were observed. [Au(abr)]

INTERCHANGE SITE, DONCASTER***Archaeological Evaluation at the Proposed Interchange Site, Doncaster***

Lewis, B Northampton : Northamptonshire Archaeology, 2003, 38pp, figs, tabs, refs

Work undertaken by: Northamptonshire Archaeology

The archaeological trial trenching identified a number of archaeological features. These included the medieval town ditch, medieval pits, post-medieval boundary features and the remains of a late 18th century water driven pumping mill. The pump was demolished in the mid-20th century. The excavations also revealed the bank of the River Cheswold adjacent to the pump. [Au(abr)]

Bell, S & Jessop, O Sheffield : ARCUS, 2004, 57pp, pls, figs, tabs, refs

Work undertaken by: ARCUS

The site fell within the former medieval manor of Norton Priory. The buildings under investigation appeared to have been developed from a manor farm that dated to the 18th century and was an excellent example of evolutionary farmstead. The structures and deposits identified within the evaluation trenches were interpreted as dating from the occupation of the site as a farm. [Au(abr)]

PARROTS CORNER PARK AND RIDE, ROSSINGTON***Parrots corner park and ride, Rossington, South Yorkshire. Archaeological Evaluation***

Jacobson, S & Bishop, M Barnard Castle : Northern Archaeological Associates, 2003, 50pp, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The site had previously been geophysically surveyed and was located close to a Roman Vexillation fortress, (SM 1044), trenches were targeted to investigate anomalies, and other areas within the site. Fourteen trenches were excavated, with a total area sampled of c.960m², approximately three percent of the total area of the site. The trenches in the northern part of the site, (1-4) produced no significant archaeological features and those that were recorded were of post-medieval origin. Trenches 7,9, 13 and 14 did contain features of uncertain date, while trenches 8, 10 and 11 corresponded closely with the results of the survey. The features found in trench 5 were not expected, but probably correlate with what was found in trenches 8 and 10. [Au(adp)]

Richardson, J & Signorelli, L Morley : Archaeological Services WYAS, 2003, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services WYAS

The evaluation was carried out in advance of a proposed redevelopment of a school building. Roman archaeology was identified including: 3rd Century pottery, a penannular brooch, two linear features, a pit and a post hole. The presence of 'domestic rubbish' in the pit could have suggested Roman settlement activity nearby. The linear features could have been boundaries or part of a field system. [Au(adp)]

Work undertaken by: ARCUS

The fieldwork identified four linear structures constructed of sandstone fragments, a number of which were well dressed and decorated. A number of finds were recovered including glass and pottery of post-medieval date. The evaluation showed that the areas directly below the houses were likely to have had too much disturbance for archaeological remains to have survived and it was suggested that further fieldwork should be focused on the garden areas. Stevens, T Twickenham : AOC Archaeology Group, 2003, 85pp, pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The standing remains on the site were recorded and three machine excavated trenches were opened across the site. The investigations revealed that most of the early buildings had been destroyed by a severe flood in 1864, following which, substantial redevelopment occurred, including the building of a new sluice and wheelhouses. Later expansion and the use of steam power kept the site in use into the 20th century. The buildings themselves were utilised for industrial processes until the late 20th century. [Au(adp)]
