BRADFORD ROAD, BIRKENSHAW*Bradford Road, Birkenshaw, West Yorkshire. Archaeological Evaluation*

Rose, M & Martin, L Morley : Archaeological Services WYAS, 2003, 21pp, figs, refs

Work undertaken by: Archaeological Services WYAS

The evaluation was carried out in advance of a proposed residential development. The main aim was to locate the projected line of the Roman Road which was believed to pass through the study area. No evidence of this road was encountered or any other archaeological deposits. However, it was ascertained that the north-eastern part of the development area had been truncated and heavily disturbed. [Au(adp)]

Dickson, A York : On Site Archaeology, 2003, 42pp, pls, figs, tabs, refs

Work undertaken by: On Site Archaeology

Several phases were identified. the earliest comprising a linear ditch and a possible pit, neither of which had any dating evidence, however stratigraphically the features were medieval or later. The second phase comprised agricultural activity, identified from the remains of ridge and furrow, tentatively dated to the medieval period. The third phase was represented by post holes which truncated the ridge and furrow implying a later date and possibly related to further phases of activity recognised in the post medieval period. [Au(abr)]

Speed, G Barnard Castle : Northern Archaeological Associates, 2003, 71pp, pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

The evaluation does appear to contain the remains of a tower keep castle. The core of the walls of the tower keep survive to a height of approx 1m but the 1922 excavation has removed any stratified deposits from within it.[Au(abr)]

Work undertaken by: Archaeological Services WYAS

The evaluation recovered evidence of late prehistoric/Romano-British occupation which had been greatly truncated by medieval agricultural practices. A droveway was recorded but the dating is unclear, however possibly later Iron Age. The enclosure may have been Iron Age, but clearly developed during the Romano-British period and gradually expanded over two/three centuries and was abandoned during the 4th century. [Au(abr)]

Work undertaken by: MAP Archaeological Consultancy Ltd.

The archaeological evaluation identified a continuation of archaeological features including gullies, postholes, pits, furrows and intercutting ditches. One of the ditches appeared to form a boundary or part of an enclosure, no date was established. Finds included three prehistoric flint flakes and two sherds of medieval pottery. [Au(abr)]
