Work undertaken by: Wessex Archaeology

The evaluation identified three medieval linear features which were environmentally sampled indicating some of the contemporary domestic activities represented on the site. Two possible post-medieval pits were also present. Finds included: Later prehistoric, Romano-British and medieval pottery, as well as post-medieval ceramic building material. [Au(adp)]

Work undertaken by: Archaeological Services & Consultancy Ltd

The evaluation was carried out in advance of a proposed development which would have involved the removal of existing post-medieval farm buildings and construction of new dwellings. No significant archaeological deposits were identified, this could have been due to recent landscaping and building work. [Au(adp)]

Work undertaken by: Oxford Archaeology

The evaluation revealed a sequence of medieval and possibly late Saxon activity against the north wall of the nave. This comprised the insertion of three graves into a buried medieval soil horizon sometime in the 12th to 13th centuries and possibly two phases of construction for buttresses in the 14th and possibly 15th centuries. Sherds of late Saxon pottery were recovered suggesting activity of that period in the vicinity. [Au(abr)]

Work undertaken by: R.J Ivans

The evaluation revealed that the eastern part of the site formerly lay within cultivated fields and that only poorly preserved post-medieval remains survived. The western part of the site had more quantity and preservation of remains and was divided into medieval tenement plots, with two further phase of division occurring later. No buildings associated with the tenements were revealed within the study area. An early medieval field boundary was also present. Finds included post-medieval glass, animal bone and pottery. Complete cat burials in the area were thought to be modern. [Au(adp)]

Work undertaken by: Birmingham University Field Archaeology Unit

The evaluation was located nearby to previously recorded evidence of prehistoric activity. This site also identified prehistoric activity which included: two pits, one of which contained Middle Bronze Age pottery, both are thought to be of similar date. The fills contained flint, animal bone and well preserved charred plant remains. A flint assemblage was also revealed in a layer of colluvium and the bulk of the assemblage dated it to the Late Neolithic or Bronze Age. Residual Roman pottery was recovered in later deposits. There was also evidence for medieval or later 'temporary structures' and post-medieval quarrying activity. [Au(adp)]

Work undertaken by: Archaeological Solutions

The trial evaluation revealed archaeological features and more recent features in the central part of the site only. Finds from these pits and post holes are indicative of a medieval date, though a number of features contained abraded Roman sherds which may have been residual. No substantial evidence of ancillary features associated with the Romano-British villa complex was identified. [Au(abr)]

Parsons, M Holton : John Moore Heritage Services, 2003, 12pp, figs, index, refs

Work undertaken by: John Moore Heritage Services

The evaluation identified no features associated with the nearby nunnery building. A post-medieval ditch was the only feature identified. Late Neolithic-Early Bronze Age worked flints were also revealed, they were probably originally deposited together but are now scattered due to ploughing activity. The lack of other contemporary deposits indicated that the deposition of the flint was an isolated event. [Au(adp)]

Work undertaken by: Wessex Archaeology

The location of this evaluation was within an area which was a focus for prehistoric and Roman-British activity, including the route of a later Neolithic trackway. The excavation revealed three burials: an infant and two neonates within the terminus of a ditch and adjacent pit, all dating to the Romano-British period. Abundant animal bone was also revealed in a layer sealing the burials which included: cattle, pig, horse, sheep and goat. [AIP]
