Fell, D et al Hertford : Hertfordshire Archaeological Trust, 2003, 46pp, figs, refs

Work undertaken by: Hertfordshire Archaeological Trust

Eastern Region

The evaluation was carried out on a site in the Ouse Valley, an area known for its rich archaeological remains. The site was thought to be part of the former Benedictine Priory Cell of St. Ives. The excavation revealed a large amount of archaeological deposits dating from prehistory to the post-medieval period. Prehistoric deposits included pottery finds and three enclosures. Roman deposits included a number of ditches, post holes, pits, pottery, building material and tessera. There was also early medieval pottery and a sunken hut as well as medieval pits, ditches, post holes, animal bones, pottery and a bone pin. Post- medieval finds consisted of pits and 'lazy bed' trenches. [Au(adp)]

Grant, J & Kier, W Hertford : Hertfordshire Archaeological Trust, 2003, 29pp, figs, tabs, refs

Work undertaken by: Hertfordshire Archaeological Trust

A field evaluation in advance of a proposed housing development revealed evidence of substantial previous ground disturbance across much of the site associated with the construction of the former engineering works. Significant, though truncated, archaeological remains were noted, comprising two inhumation burials and two parallel ditches. No dating evidence accompanied these, however, the ditches were aligned in the east-west Christian tradition and may have been associated with a Late Saxon or medieval cemetery. No definite evidence for the adjacent Roman villa and ancillary features of the medieval moated site was noted. [Au(abr)]

NEWTON COUNTY PRIMARY SCHOOL, ELTISLEY*Early Medieval Features at Newton County Primary School*

Atkins, R Fulbourn : Archaeological Field Unit, Cambridgeshire County Council, 2003, 13pp, figs, refs

Work undertaken by: Archaeological Field Unit, Cambridgeshire County C

An evaluation was carried out in advance of the building of a new school hall. At least two phases of archaeological features were noted beneath the topsoil. The earliest features were a north-south ditch and a pit cutting natural clay, which were both undated. A large pit dated to 1200-1300 cut these features, and was backfilled with a large amount of charred cereal grains. An adjacent north-south ditch was thought to be contemporary with this. The archaeology seemed to represent back plots to houses fronting the roadway to the nearby moated manor site. The land was under post-medieval ridge and furrow that was removed when the school was built. [Au(abr)]
