*Report for an Archaeological Evaluation at Drumburgh, Cumbria*

Giecco, F Alston : North Pennines Heritage Trust, 2003, 22pp, colour pls, figs, tabs, refs

*Work undertaken by:* North Pennines Heritage Trust

Six trenches were excavated, all within the Roman wall fort of Drumburgh. The trenches varied in size, from 1m x 1m to 4m x 1.5m. Four trenches were excavated along the line of a new service trench, in these the only significant deposits were probable 14th century deposits from an ill-defined cut feature (no significant Roman deposits were recorded in trenches one-four). In trenches five and six, excavated to explore the archaeological potential for a proposed extension, the probable line of the wall ditch and the position of the berm, between the wall and the ditch was located. These remains had been truncated, and lay only 0.10m below the present ground surface. [Au(adp)]

Bates, A Lancaster : Oxford Archaeology North, 2004, 22pp, colour pls, figs, refs

*Work undertaken by:* Oxford Archaeology North

No remains of the Hadrian's Wall or its foundations were identified within the trench, and the natural glacial till proved to be at an extremely shallow depth at this location. It was evident that the wall had been entirely removed by the green lane, which had eroded the natural slope to the east. Similarly, the Wall ditch, at the northern end of the trench, was also absent, although a thick layer of colluvial material, containing a small fragment of Roman pottery, was found in its estimated position. It is suggested that rather than excavating a defensive ditch in this section of the frontier, a bank was created to the north of the Wall, making use of the natural contours of the land, thus forming a ditch-like feature. Elsworth, D & Clark, P Lancaster : Oxford Archaeology North, 2003, 43pp, colour pls, figs, refs

*Work undertaken by:* Oxford Archaeology North

Following an assessment that identified a large number of sites of archaeological interest within the general vicinity, evaluation trenching revealed evidence for a demolished building to the north of St. Joseph's Home that appears to have been broadly contemporary with the construction of the home. It also identified numerous services associated with the building and evidence for a widespread truncation of the site prior to construction of the home. The remains of the original drive were also uncovered. No archaeological features were identified dating prior to the construction of the building, and all finds recovered were post-medieval in date, mainly late nineteenth or early twentieth century. Crompton, P Alston : North Pennines Heritage Trust, 2003, 26pp, colour pls, figs, tabs, refs

*Work undertaken by:* North Pennines Heritage Trust

The work comprised a full photographic survey of all field boundaries followed by the excavation of linear trenches across selected field boundaries. The results showed that the field boundaries dated exclusively from the 18th-19th centuries, rather than of prehistoric date. [Au(adp)]

Thirteen trenches, 1280m squared, were excavated. The remains of a Roman road were revealed in two trenches, the road consisted of gravel over a cobble rich layer of redeposited subsoil, contained within a cut. One other trench contained a ditch that yielded relatively modern finds. This road, had been identified in the assessment as the Manchester to Carlisle Roman Road, SMR No. 11055. Three other sites, an enclosure cropmark, a ruined building that has been demolished and a polished stone axe were also identified as within 500m of the site. [Au(adp)]

A second phase of work, involved the excavation of trial trenches within the central part of the site, which identified the walls of a building, with associated yards, paths and boundary features. Finds recovered were all of late 18th -19th century date and consistent with domestic occupation of ordinary status. No evidence of any earlier activity was recovered. [Au(abr)]

Dawson, J Lancaster : Oxford Archaeology North, 2003, 52pp, colour pls, figs, tabs, refs

*Work undertaken by:* Oxford Archaeology North

The evaluation showed evidence of occupation earlier than the mill. It revealed a cobbled surface and a garden soil apparently dating to the 18th century, possibly contemporary with the use of the site as a smithy as suggested by the desk-based assessment. A later pit and re-deposited topsoil both contained finds dating to the late 18th to early 20th centuries. The proposed development would impact on an area of significant archaeological deposits.
