BH21 7JA**MANOR FARM, HORTON***Land at Manor Farm, Horton, Dorset*

Robinson, S Chicklade : AC archaeology, 2003, 13pp, figs, tabs, refs

*Work undertaken by:* AC archaeology

Features identified comprised two intercutting ditches, one appeared to be of Bronze Age date and the second contained medieval pottery. One probable post hole was uncovered and although undated predates the medieval ditch. Further features and structures were identified and were likely to be modern [Au(abr)]

*Archaeological periods represented:* BA, MD, UD

Robinson, S &amp; Valentin, J Chicklade : AC archaeology, 2003, 8pp, figs, tabs, refs

*Work undertaken by:* AC archaeology

The site lies within the 'Southern Henge', one of a group of three late Neolithic henge monuments known as the Knowlton Circles. However, grounds works revealed no features or finds associated with pre-modern archaeological activity. [Au(abr)]

### North Dorset

2/927 (C.19.L007)

Laidlaw, M, Robinson, S &amp; Valentin, J Chicklade : AC archaeology, 2003, 14pp, colour pls, figs, tabs, refs

*Work undertaken by:* AC archaeology

Three phases of archaeological activity were identified. The earliest was evidence for medieval settlement towards the Parsons Pool street frontage (phase 1) sealed by a tile and brick floor of probably 18th century date (phase 2). 19th century and later deposits including structural evidence for a former timber yard and a stone slab floor, were also present on the site (phase 3) [Au(abr)]

*Archaeological periods represented:* MD, MO, PM, UD

*Work undertaken by:* Archaeological Site Investigations

Trial excavations revealed a gully containing 10th/11th century pottery, sealed by a midden deposit of 12th-16th century date and a later linear ditch. The report concluded that whilst the results were significant, the deposits that would be affected by the proposed development were likely to have been backland deposit of low-moderate archaeological potential. [Au(abr)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2003, 23pp, figs, tabs, refs

*Work undertaken by:* Wessex Archaeology

A total of eight trenches were excavated. Significant archaeological remains were recorded on the western part of the site. These included structural elements such as walls and floors and suggested the presence here of well preserved settlement remains of Early Iron Age date. In the central part of the site, post-medieval or modern quarrying removed any evidence of prehistoric settlement. A settlement boundary ditch may have been located in one trench in the central area. [Au(abr)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2003, 9pp, figs, tabs, refs

*Work undertaken by:* Wessex Archaeology

Two trenches were excavated to reveal medieval ditches, post holes, and finds. The results of the evaluation suggested the site contains a high density of medieval archaeological remains perhaps adjacent to a settlement. The proposed development was likely to have a profound impact on archaeological remains. [Au(adp)]

Laidlaw, M, Robinson, S &amp; Valentin, J Chicklade : AC archaeology, 2003, 14pp, figs, tabs, refs

*Work undertaken by:* AC archaeology

The work identified a series of field and drainage ditches in the south-east portion of the site, with the limited amount of pottery recovered indicating they were in use from the early medieval period into the 13th century. It was at this time that the medieval town expanded into the Horsecastles area. Across the remainder of the site only modern features were present [Au(abr)]
