Morris, T Gloucester : Gloucestershire County Council Archaeology Service, 2003, 12pp, figs, tab, refs

*Work undertaken by:* Gloucestershire County Council Archaeology Service

Two trenches were excavated, trench one measured 12.2m in length and trench two was 11.5m, both were 1.5m wide. Trench two demonstrated the presence of ridge and furrow and a post-medieval field drain. Trench one demonstrated the survival of a group of truncated archaeological features of unconfirmed date. The three gullies and two post holes identified may have been remains of Romano-British occupation or traces of post-medieval/recent horticultural activity. [Au(adp)]

*Work undertaken by:* Bristol and Region Archaeological Services

The site was located within Lancaut Fort, a Scheduled Ancient Monument and Iron Age defended enclosure. Three trial trenches excavated prior to the construction of a garage and tennis court, uncovered part of the fort's outer ditch, backfilled in the 19th and 20th centuries and disturbed by modern services. The trenches measured 18m x 1.5m, and 5m x 1.5m. [Au(adp)]

Barret, R Gloucester : Gloucestershire County Council Archaeology Service, 2003, 11pp, figs, tabs, refs

*Work undertaken by:* Gloucestershire County Council Archaeology Service

Two trenches were excavated, one 25m. and the other 5m. long, each 1.52m. wide. Six archaeological features were recorded, four securely dated to the Roman period. A large east-west ditch, context 203, was orientated parallel with the original line of Roman Ermine Street. This probably formed the northern (rear) boundary ditch for properties along the northern side of the Roman road, within the settlement area. The other features were interpreted as further evidence of Roman occupation and activity on the site, further attested to by the large amount of Roman artefacts recorded during the evaluation. A single trench, 10m x 1.5m, was excavated, revealing buried soils. Dating evidence from these soils indicated the site had been under cultivation from at least the later 13th century. Truncating this soil were garden features of the 17th -18th century. Most of the topsoil had been recently removed and the ground level raised with building rubble. [Au(adp)]

Twenty four trenches, each generally 1.2m wide but varying in length as circumstances dictated, were excavated. The evaluation found evidence of possible prehistoric activity together with early medieval and post-medieval occupation. The prehistoric activity consisted of a shallow gully in trench 23, context 2308, sealed below deposits dated by four worked flints and a small fragment of possible smoothed stone. Other worked flints were recovered. The medieval evidence consisted mainly of a deep pit in trench 23, context 2304 and a feature in trench 26, context 2619. The post-medieval remains were extensive throughout the area occupied by the Bymacks car park (Area F). [Au(adp)]

Nash, G Leominster : Border Archaeology, 2003, 43pp, colour pls, figs, tabs, refs

*Work undertaken by:* Border Archaeology

Eight evaluation trenches were excavated within two walled gardens. Trenches located in the smaller of the two gardens, close to the Canonbury Street frontage, revealed a series of deposits and structures associated with building activity together with a small assemblage of medieval pottery. The evidence suggested that this area contained up to three medieval dwellings and associated burgage plots. The remains of a 19th century greenhouse, along with a series of deposits and structures relating to drainage were revealed within the larger garden. A series of formal garden features possibly predating the walled garden were also uncovered as well as further garden features. [Au(adp)]
