The test pits revealed that all archaeological layers and features prior to 1800 were removed. The site had been built-up with layers brick hardcore and rammed chalk. Loosely laid 19th century cobbles were seen. No pre-19th century layers or features were uncovered. [Au(abr)]

Work undertaken by: Cotswold Archaeology

A topographic survey was made of an area within the Roman and later pottery production centre at Alice Holt forest. Subsequently, evaluation trenches revealed a metallised surface, a possible kiln structure, 1st century floors, a waster dump of Roman pottery and a single late Neolithic flint. [AIP]

Work undertaken by: Wessex Archaeology

An evaluation was carried out in advance of the construction of 275 new dwellings, a school and an area of open land. A small north west-south east aligned ditch was the only significant archaeological feature located. Roman pottery, Mesolithic flint flakes and medieval finds were recorded. Post-medieval boundary ditches, a possible clay quarry pit and a probable field drain were also encountered. [Au(abr)]

Work undertaken by: Gifford and Partners

Trenches were excavated following the discovery, by a metal detectorist, of a skeleton and grave goods. A single human inhumation was excavated. However, it is not believed that this was the skeleton encountered by the detectorists. The skeleton was badly damaged, probably as a result of ploughing, and no grave goods were found. A single sherd of pottery found in the grave suggested a Saxon date for the burial. [Au(abr)]

Work undertaken by: CKC Archaeology

A late Iron Age or early Romano-British ditch and associated post hole were found that thought to be part of a contemporary settlement near the find spot of the Alton Hoard. The sharp profile of the ditch suggested it was a short lived feature filled in with material containing moderately large quantities of contemporary pottery around the time of the Roman invasion. An evaluation found a number of features identified as tree-throws. The one feature of human origin was a shallow scoop in the chalk containing part of a human skeleton. The burial was of indeterminate form but was probably crouched. A date of c.1350 BC was obtained by radiometric dating, placing the burial in the Middle Bronze Age. There was no sign of a ring ditch around it. [Au(abr)]

Currie, C Fair Oak : CKC Archaeology, 2003, 15pp, figs, tabs, refs

Work undertaken by: CKC Archaeology

No evidence was found for burials pre-dating the 19th century. The evaluation area was found to be much disturbed during this period and later by two lines of graves. The eastern line seemed to cut through some of the graves in the western line, both lines being of 19th century or later date. Most of the graves were dated by contemporary coffin furniture. The evaluation did not require the burials to be lifted, and they were reburied largely undisturbed. [Au(abr)]
