HELLIFIELD PEEL AND HOMESTEAD, HELLIFIELD

Hellifield Peel and Homestead, Hellifield, North Yorkshire

Archaeological Services WYAS Leeds : Archaeological Services WYAS, 2003, 66pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services WYAS

Documentary and cartographic evidence were examined and the history and development of the Peel area described. There was an absence of map evidence for the pre-18th century parkland and of pictorial records for the design and layout of the Victorian gardens. An earthwork survey recorded a number of features relating to a possible water garden, some of which are not obvious on the ground. Evaluation trenching revealed surviving elements of a sunken Victorian glasshouse and 12th to 14th century ceramics were recovered from possible moat deposits. [Au(abr)]

HIGH STREET, GARGRAVE

Land at High Street, Gargrave, North Yorkshire. Archaeological Evaluation and Excavation

McCluskey, B & Martin, L Morley : Archaeological Services WYAS, 2004, 104pp, colour pls, figs, tabs, refs, index

Work undertaken by: Archaeological Services WYAS

This evaluation was carried out in advance of a proposed residential development. Open plan excavations revealed evidence of previously unknown Late Iron Age/Early Roman activity represented by six graves which appeared to belong to a cemetery. The burial practices used in this cemetery were unusual for the period. Two of the skeletons appeared to have been bound before interment. In addition, one of these bound skeletons had been positioned directly above that of a flexed female skeleton, a practice that had no parallels in other known contemporary sites of this period. In addition one female inhumation contained 16 neonatal sheep bones which could have represented a food offering. The area then appeared to have been undisturbed until the medieval period with evidence for pottery, ditches, pits, post holes which could have been part of tenement plots. [Au(adp)]

THORNBOROUGH MONUMENT COMPLEX

Total Lithic Collections and Test-Pit Excavations at the Thornborough Monument Complex, North Yorkshire

Harding, J & Johnson, B Newcastle : University of Newcastle School of Historical Studies, 2003, 22pp, figs, refs

Work undertaken by: University of Newcastle School of Historical Studi

This evaluation also involving a geophysical survey, identified 134 prehistoric lithics and forty-two pits were excavated, closely associated with a higher density of lithics on the surface. This evaluation formed part of a series of reports carried out by the University of Newcastle specifically in this area. [Au(adp)]

Harding, J & Johnson, B Newcastle : University of Newcastle School of Historical Studies, 2003, 27pp, figs, refs

Work undertaken by: University of Newcastle School of Historical Studi

This evaluation resulting from a geophysical survey, aimed to provide a detailed up to date assessment of the preservation levels and potential of archaeological deposits in the study area. Prehistoric barrows (two of which were excavated), henges, pits, ditches and lithics were all identified. Fragments of human skeletal material, including a complete skull were recovered from one of the two excavated barrows. This evaluation formed part of a series of reports carried out by the University of Newcastle specifically on this site. [Au(adp)]

Work undertaken by: On Site Archaeology

The archaeological programme consisted of the excavation of two trenches to determine the nature of archaeological deposits in the area. A number of archaeological features and deposits were revealed, including a ditch or terrace, pits and post holes. Pottery, bone and assorted finds from the medieval, post-medieval and early modern periods were recovered. [Au(abr)]

Work undertaken by: York Archaeological Trust

Seven archaeological trenches, trench one measuring 6m x 4.5m, trench two, 10m x 3m, trench three, 6m x 3.4m, trench four, 6.5m x 6m, trench five, 5m x 2.5m, trench six, 5m x 4m and trench seven, 10m x 4m were excavated. The earliest evidence was a sherd of Samian ware from trench two and Roman brick from trenches one, two, three and five. Evidence for Anglian and Anglo-Scandinavian periods were recovered from trench one, including a group of metal objects of the 8th -10th century and animal bone. Medieval evidence was recorded from all trenches except trench two, and included securely dated deposits, features and structures. Timber buildings, fronting Low St. Agnesgate, and associated ditches, gullies and other features to the rear and east. Post-medieval evidence was collected in the form of unstratified pottery. Work undertaken by: University of Durham, Archaeological Services

Significant archaeological deposits were identified in two of the three trenches evaluated. These probably represented the continuation of an Anglian settlement previously identified and partially excavated in the adjacent field. One Roman coin, probably reused as a pendant in the Anglian period, some charred breadwheat of post-Romano-British date and a small quantity of animal bone were recovered from the features. Middleton, P & Dooper, O Barnard Castle : Northern Archaeological Associates, 2003, 11pp, colour pls, figs, refs

Work undertaken by: Northern Archaeological Associates

Following a topographic survey of earthworks on the site, two trenches were excavated to investigate aspects of the earthworks. Trench one, 9m x 1.5m, was sited to investigate a possible building platform, and trench two, 10m x 1.5m, to investigate the form and nature of a horseshoe shaped depression. The trenches demonstrated that the earthworks were partially the result of tipping or dumping activity, of possible post-medieval date. [Au(adp)]

Work undertaken by: MAP Archaeological Consultancy Ltd.

Evaluation trenches to the rear of 42 Wheelgate, Malton demonstrated the survival of pits and post holes dating to the 12th or 13th century. A wall exposed in trench one and traced in plan at the southern side showed that a stone building, possibly of the same date, was incorporated into the 19th century brick building that stood on the site. Work undertaken by: On Site Archaeology

The site contained a terrace of buildings extending northwards from the extant Cleveland House the had been removed in 1915. The modern ground surface contains a number of earthworks that may represent the remains of the 19th century buildings. Three trenches were initially excavated to reveal a beam slot, a drain pipe, a boundary ditch and building remains. [Au(adp)]

Evans, D T York : York Archaeological Trust, 2003, 49pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

An evaluation was carried out in advance of a housing development. All five trenches excavated revealed archaeological remains of some kind. An Iron Age feature was the earliest and possibly most significant recorded. Medieval ditches were also noted, along with some deposits. Post-medieval remains were observed across the site and comprised deposits, a possible post hole, pits, ditches and a gully. Early modern material was also identified and consisted of pits, post holes, brick structures and deposits. The full significance of the archaeological remains was declared uncertain at the time of the report. [Au(abr)]
