Hollinrake, C &amp; Hollinrake, N Glastonbury : Charles &amp; Nancy Hollinrake, 2003, 38pp, figs, tabs, refs

*Work undertaken by:* Charles and Nancy Hollinrake

Features noted within the earth floor inside the western half of the barn were recorded. These included part of a circular feature connected with a post-medieval horse mill and two shallow slots defined by limestone slabs running from the area of the horse mill up to the west wall. Three levelled transect surveys demonstrated the amount of ground build-up and the considerable depth of ground that has been removed from the north side of the barn. The transect surveys also demonstrated that the plinth levels on the south and north walls were relatively identical. [Au(abr)]

*Work undertaken by:* Charles and Nancy Hollinrake

An archaeological evaluation recorded ditches and post holes of 12th-14th century date. A thick, cultivated soil or occupation deposit dating to the 17th or 18th centuries overlaid the alluvium and the medieval horizons and this in turn was sealed by a thick, clay later and modern garden soil. The early post-medieval finds and features were concentrated around the present house which was probably built in the late 19th century. [Au(abr)]

Robinson, S &amp; Valentin, J Chicklade : AC archaeology, 2003, 72pp, figs, tabs, refs

*Work undertaken by:* AC archaeology

The earliest phase comprised a large number of features and artefacts indicating in situ settlement. Based on the artefact evidence, settlement at Alstone seems to be centred on the 3rd to 1st centuries BC. The next phase of activity on the site occurred during the medieval period, a series of linear features was likely to represent evidence for field and enclosure boundary or drainage ditches. A possible oven structure and a number of pits of this date were also identified. During the post-medieval period a number of the medieval linear features went out of use and new boundaries or drains were established. A large area of deliberate infilling was identified [Au(adp)]
