KT12 2SW**'PHASE ONE' AREA OF THE THAMESMEAD ESTATE, WALTON ON THAMES***An Archaeological Evaluation of the 'Phase One' Area of the Proposed Re-Development of Thamesmead Estate, Terrace Road, Walton on Thames, Surrey*

Hayman, G Woking : Surrey County Archaeological Unit, 2003, 8pp, figs, refs

Work undertaken by: Surrey County Archaeological Unit

A small number of unstratified struck and burnt flints were discovered in trenches two and three, and the presence of this material indicates that there may have been some activity in the vicinity during this period, though no evidence was discovered to suggest that the site area itself had been occupied. A Roman cremation burial discovered in trench three is the first feature of this date to be found within the immediate area. It was thought possible that further cremations and possibly other forms of burial may survive within the redevelopment area. Some further archaeological work will be required. [Au(adp)]

Stevens, S Ditchling : Archaeology South-East, 2003, 14pp, figs

Work undertaken by: Archaeology South-East

An archaeological evaluation was carried out on 19th and 20th May 2003 at the site of the former Horton Hospital, Long Grove Road, Epsom. Eight trial trenches were mechanically excavated to a cumulative length of 145m. There was some evidence of truncation associated with the construction and use of the hospital buildings. No archaeological features were observed and no artefacts were recovered from the overburden. [Au(adp)]

Work undertaken by: Archaeology South-East

A total of eight machine excavated trial trenches were dug, two of which produced remains of archaeological significance. Trench one exposed two pits/ post holes and a gully, all of probable prehistoric date and a grave of Anglo-Saxon date that had been previously excavated. Six features were exposed in trench seven. Four of these were small pits, three of general prehistoric and one of mid-later Iron Age date. Two very large pits, possibly used for grain storage, of later Iron Age date were sampled. [Au(abr)]

Work undertaken by: Surrey County Archaeological Unit

The evaluation led to the discovery of a number of parts of ditches and gullies which probably belong to an ancient field system. They seem likely to be related to the area of Iron Age settlement, with associated enclosures and fields, that lay principally to the north of this area. Further evidence of Iron Age and Roman date is known to the south. It was recommended that controlled stripping of several areas of ground around these features was undertaken in order to clarify their date and character. [Au(abr)]
