MILLENIUM VIEW, HALES STREET, COVENTRY*An Archaeological Evaluation at Millennium View, Hales Street, Coventry*

Meek, J Leicester : University of Leicester Archaeological Services, 2004, 34pp, pls, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

The test pits excavated close to the Hales street frontage have shown the presence of cellars associated with the former Smithfield Hotel, and post medieval deposits. On the western side of the site medieval and post-medieval pottery was recovered. Environmental remains were recovered from deposits in the area through the medieval period. [Au(abr)]

THE ROPEWALK, CHAPEL STREET, NUNEATON*Archaeological Evaluation at the Ropewalk, Chapel Street, Nuneaton, Warwickshire. Stage 1*

Palmer, S & Jones, C Warwick : Warwickshire Museum Field Services, 2003, 24pp, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

The first stage of the archaeological evaluations revealed limited evidence for medieval activity through a pits and gullies. One pit contained a significant quantity of fish bones. The gullies may mark a 14th/15th century development of the properties fronting Queens Road. The development was apparently short lived, the properties were abandoned to cultivation in the late medieval period and most of the boundaries disappeared. [Au(abr)]

Work undertaken by: Warwickshire Museum Field Services

The archaeological field evaluation revealed evidence for Romano-British and medieval activity across the site. Several ditches, a wall probably representing property boundaries and a possible rubbish pit were revealed. Two ditches containing Romano-British pottery may also have been field boundaries or may relate to a settlement enclosure. A number of undated pits and gullies are most likely to be associated with either medieval or Romano-British activity. [Au(abr)]

Work undertaken by: Warwickshire Museum Field Services

The archaeological evaluations revealed limited evidence for 12th - 13th century activity associated with the earliest phase of the town in the form of a boundary gully and pits. Further boundary construction in the 15th - 16th century appears to have been connected with the burgage plot, although there was further pit digging in that area at this time. The boundary gully was recut in the 17th early 18th century but there was no further activity within the area until the 19th century. [Au(abr)]

Work undertaken by: Warwickshire Museum Field Services

The archaeological evaluation revealed evidence for medieval reuse of the Roman Road of Ryknild Street. Other Romano-British features included two ditches, possibly field boundaries. The probable remains of a medieval timber structures overlain by a yard surface was recorded along with a quantity of 12th/13th century pottery. The area appears to have lain within fields from the late medieval period and a number of medieval furrows were recorded. [Au(abr)]

CRABTREE GARDEN CENTRE, STRATFORD ROAD, BIDFORD ON AVON*An Archaeological Field Evaluation at Crabtree Garden Centre, Stratford Road, Bidford on Avon, Warwickshire*

Meek, J Leicester : University of Leicester Archaeological Services, 2003, 32pp, figs, tabs, refs

Work undertaken by: University of Leicester Archaeological Services

The site was located to the north of a series of cropmarks. Within all the excavated trenches it was evident that intensive cultivation had taken place in recent years. In addition, all trenches showed evidence for the shallow remains of medieval plough furrows. No further archaeological features were revealed on the site other than a single post-medieval small pit or post hole. Modern pottery, brick and tile was noted in small quantities across the site. The only significant archaeological find was a worked flint. [Au(abr)]

Work undertaken by: Warwickshire Museum Field Services

The archaeological evaluation was undertaken on a site at the edge of the medieval western suburb where evidence of medieval industrial activity was revealed. The evidence comprised a probable tile kiln and oven or malting kiln. Remains of a tile floor were also uncovered along with a collapsed or disturbed stone wall foundation located close to the street frontage. Further evidence of medieval occupation was recorded on the site including clay and rubbish pits. A medieval roadside ditch was also revealed along with post-medieval rubbish or quarry pits. [Au(abr)]

Work undertaken by: Warwickshire Museum Field Services

An archaeological trench excavated to the rear of a new property at Hemmings Mill, was situated within the likely extent of the medieval village and close by cropmark complexes of later prehistoric and Romano-British date. The site revealed a series of probable gravel quarry pits overlaid by a brick foundation and floor of an outbuilding of 19th century date. No finds or features associated with medieval or earlier settlement were encountered. [Au(abr)]

Work undertaken by: Warwickshire Museum Field Services

The archaeological field evaluation was undertaken on the floodplains of the proposed site of a fishing lake. No significant archaeological finds or deposits were encountered within the trenches but an undated sequence of alluvium derived from the river in flood was recorded. However the alluviation is comparable to other recorded sequences in the lower Severn-Avon valleys suggested as the result of ploughing during the later Bronze Age. [Au(abr)]
