Work undertaken by: Wessex Archaeology

The archaeological evaluation consisted of five machine excavated trial trenches. The only cut features found proved to be modern in date. The depth of the alluvial deposits found in the trenches indicated that this area formed part of the foreshore of the Tory Brook. [Au(abr)]

Work undertaken by: Exeter Archaeology

Trenches revealed evidence of walls and drains or culverts beneath an apparent sequence of destruction and demolition layers. Although dating evidence was fairly imprecise, the pottery, where stratified, indicated a mid to late 18th century date for occupation. [Au(adp)]

Stead, P & Passmore, A Exeter : Exeter Archaeology, 2003, 22pp, pls, figs, refs

Work undertaken by: Exeter Archaeology

The site produced archaeological material of mainly 17th or 18th century date. Late 15th or 16th Dutch floor tiles may have derived from a nearby building. Former harbour silts were observed in almost all trenches. The fragment of walls recorded in a number of trenches within Friary Quay appeared to coincide with buildings fronting Friary Street and associated with later development of the site. [Au(adp)]

Work undertaken by: Exeter Archaeology

No significant archaeological deposits were found within the excavation in the northern part of the site, apart from the remains of former properties dating from the 19th century and two infilled depressions interpreted as WWII bomb craters. The southern part of the site was found to consist of up to 4 m of demolition debris above the natural clay and limestone. The remains of walls associated with the Yacht Club and a few 19/20th century ceramics were recovered. [Au(abr)]

The evaluation did not identify any structures, surfaces or dateable features. The archaeological evaluation demonstrated fairly low potential for survival of archaeological deposits. [Au(adp)]

Work undertaken by: Exeter Archaeology

With the exception of a narrow limestone fissure seen in trench one, and the probable boundary represented by the bank exposed within trench five, no significant archaeological features were exposed. The stone bank seen within trench five remains undated; the overlying sherd of Iron Age pottery was considered to be residual. [Au(adp)]

Reed, S & Jones, P Exeter : Exeter Archaeology, 2003, 20pp, pls, figs, tabs, refs

Work undertaken by: Exeter Archaeology

A series of ten evaluation trenches were excavated across the site. The main archaeological features exposed on the site consisted of the ditches associated with the ploughed-out remains of a field system, a brick culvert and a substantial ditch features. Background prehistoric activity was indicated by the presence of small pits and linear features. The dearth of artefacts recovered from either the topsoil or the excavated features indicate that the site was not particularly intensively occupied. Most of the features were undated. [Au(adp)]

WEMBURY BAY, PLYMOUTH***Archaeological Recording at Wembury Bay, Plymouth, Devon***

Reed, S Exeter : Exeter Archaeology, 2003, 10pp, figs, pls, refs

Work undertaken by: Exeter Archaeology

This evaluation involved assessing the current state of two previously observed 'burnt features' on the cliff side. The features were identified as a slate lined pit (probably a hearth) and a gully containing abundant charcoal which was radiocarbon dated to 250-640AD. [AIP]
