Work undertaken by: Wessex Archaeology

Tree trenches were opened using a mechanical excavator. The archaeological potential of the site would appear to be low and confined to a ditch of probably medieval date revealed in trench three. Subsequent development of the site was represented by features and make-up deposits of post-medieval or later date. [Au(abr)]

Work undertaken by: Wessex Archaeology

Two excavation trenches partially revealed two ditches, conceivably corresponding to the inner and out town ditches. One rim sherd of medieval pottery and ceramic building material were recovered, along with a fragment of bone, from redeposited brickearth. Modern foundations were also revealed. These have severely impacted archaeological remains. [Au(abr)]

HIGH STREET AND CASTLE WAY, STAGE 1*Report on Stage One of the Archaeological Evaluation of Land between High Street and Castle Way ("the Habitat and Marconi block", Southampton, SOU 1230*

Smith, M Southampton : Southampton City Council Archaeology Unit, 2003, 153pp, colour pls, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

Twelve evaluation trenches were excavated. Small quantities of residual prehistoric and Roman finds were found. The earliest certain occupation evidence dated to the late-Saxon period, and included post holes from a probable building. By the 13th century the area has been divided into a number of properties onto High Street to the east and French Street to the west, with a garden belonging to the priory of St. Denis between them. HIGH STREET AND CASTLE WAY, STAGE 2*Report on Stage 2 of the Archaeological Evaluation of Land Between the High Street and Castle Way ("the Benfield buildings"). Southampton, SOU 1230*

Smith, M Southampton : Southampton City Council Archaeology Unit, 2003, 138pp, colour pls, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

A total of nine trenches were excavated. Small quantities of residual prehistoric, Roman and middle-Saxon finds were recovered. The earliest certain occupation evidence dated from the late-Saxon period, and included rubbish pits, ditches, and slight traces of buildings in the form of burnt daub and limestone rubble. Evidence shows that stone-built cellars, one of which was vaulted, were constructed on the High Street frontage. Rubbish pits and wells were found overlain by a thick garden soil. [Au(abr)]

Ten small test-pits revealed layers of loam containing a range of material including prehistoric flints, Roman brick, medieval pottery, post-medieval pottery and tiles, and a variety of early modern and modern material. One trench contained the remains of an early 20th century farm building. [Au(abr)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2003, 10pp, colour pls, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation comprised the excavation of four trenches in the footprints of three proposed new accommodation blocks. Prehistoric features were recorded below the brickearth. In trench three a small channel containing Bronze Age pottery was recorded immediately below the brickearth. The evaluation concluded that although there was evidence of considerable disturbance on the site and evidence of landscaping, there remains significant potential for archaeology to survive. [Au(abr)]

Work undertaken by: Southern Archaeological Services

A single trench revealed the Medieval town ditch. The lower ditch fills comprised a sequence of waterlogged deposits overlaid by an intermittently anaerobic deposit, but no organic remains associated with the Friary were recovered. One ditch fill contained an assemblage of pottery dating almost exclusively to the 1680s-1690s reflecting a period of infilling of the ditch. A truncated feature located centrally within the trench appeared to be the robbed-out northern continuation of a limestone wall visible in a trench some 30m to the south of the site. This feature is interpreted as being the lining for the western edge of a part of the late 18th century Salisbury to Southampton Canal. [Au(abr)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2003, 21pp, colour pls, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The evaluation revealed four features of probable Romano-British date, one feature of probable late post-medieval date, and a sequence of buried foreshore deposits whose position is broadly similar to the position of the Itchen frontage mapped in 1820. Finds were restricted to Romano-British pottery and ceramic building material, with a single fragment of post-medieval brick. [Au(abr)]
