**BROADWAY THEATRE SITE*****Archaeological Excavations at the Broadway Theatre Site, Barking. London Borough of Barking and Dagenham***

Capon, L Twickenham : AOC Archaeology Group, 2003, 64pp, figs, tabs, refs

*Work undertaken by:* AOC Archaeology Group

Two archaeological evaluation trenches and two areas of full excavation were examined. At the western end of the site, archaeological deposits will be preserved beneath sympathetic landscaping, whereas to the east, redevelopment of the theatre frontage will result in their removal. Trench 1 revealed a sequence of 18th century floor surfaces which had been established over an earlier pit. Trench 2 was dominated by a mid-16th century pit containing high status pottery, while trenches 3 and 4 were characterised by extensive pits which had been rapidly infilled. These pits contained a large quantity of domestic refuse that enabled a 18th century date to be confirmed. [Au(abr)]

**EASTBURY MANOR, BARKING*****Archaeological Recording Survey and Watching Brief at Eastbury Manor, Barking, Essex***

Carlyle, S Northampton : Northamptonshire Archaeology, 2003, 28pp, colour pls, figs, tabs, refs

*Work undertaken by:* Northamptonshire Archaeology

A watching brief and recording survey was undertaken during the excavation of a new foundation trench. The fabric suggests the wall is probably broadly contemporary with the Elizabethan house. There was a single phase of original construction, followed by subsequent alterations, including the removal of the upper c. 2m of the wall and the addition of buttresses to the south side. Patches of limewash may relate to a building shown on early maps, although no direct evidence was found for this structure. No other archaeological remains or artefacts were seen. [Au(abr)]

**EASTBURY MANOR, BARKING*****Archaeological Watching Brief at Eastbury Manor, Barking, Essex***

Carlyle, S Northampton : Northamptonshire Archaeology, 2003, 22pp, pls, figs, tabs, refs

*Work undertaken by:* Northamptonshire Archaeology

The wall was shown to have shallow footings, resting on a foundation of compacted shingle set in a foundation trench. No evidence was found to date the construction of the wall, but its fabric suggest that it was broadly contemporary with the Elizabethan house and dated to the second half of the 16th century. *Work undertaken by:* Museum of London Archaeology Service

Groundwork involving the exaction of trenches for building foundations was monitored. The natural was overlain by a ploughsoil deposited during the medieval period. Above this were a series of medieval and post-medieval ploughsoils and layers of dumped materials. These were sealed by 19th century layers, representing made ground and yard surfaces. A 19th century brick lined well was uncovered at the centre of the yard area. In the area covered by the former building were a number of 19th century occupation and makeup layers, wall foundations and floors. [Au(abr)]

Wragg, E London : Pre-Construct Archaeology Ltd., 2003, 63pp, pls, figs, tabs, refs  
*Work undertaken by:* Pre-Construct Archaeology Ltd.

The excavation comprised twelve trenches. The earliest features recorded from the site were intercutting post holes containing no cultural material. There were sealed by a colluvial layer containing late Roman and early Saxon material. Three pits, one post hole and a number of ditches containing late Roman and early Saxon material were revealed cutting the colluvial layer. The substantial quantity of Roman ceramic building material recovered indicated the presence of a building in the vicinity. A number of post-medieval and 19th/20th century agricultural features containing a small amount of residual late medieval pottery were recorded. [Au(abr)]

An archaeological watching brief observed modern surfacing that sealed alluvial horizons. There was no evidence of any associated human activity, or for any presence on the site before the 19th century. In the western part of the basement excavation and along its southern edge two large drainage channels were recorded. These area not conclusively dated, but they clearly form part of the process of land drainage and reclamation and were recorded as such on a map of the late 1860s. The made ground and fill horizons contained occasional late post-medieval finds, including pottery, clay tobacco pipe and fragments of brick or tile. [Au(abr)]

*Work undertaken by:* Museum of London Archaeology Service

Work on new housing was monitored and archaeological deposits were recorded in a trench to the rear of the site. They included Roman deposits at the base of the sequence, indicative of roadside activity proximal to the Roman road from London to Dover, 18th century corresponding to the functioning of the former roadside inn, The Castle, and 19th century made ground associated with wall foundations. Saxby, D London : Museum of London Archaeology Service, 2003, 56pp, figs, tabs, refs

*Work undertaken by:* Museum of London Archaeology Service

Positive results of the evaluation led to an excavation within a larger trench located within the southern part of the site. The earliest artefacts recovered were the struck and burnt prehistoric flints dating to the Mesolithic and Neolithic periods. The medieval activity was represented by a number of pits and a ditch dating from the 12th to 14th centuries. These features represent small scale rural settlement along the original line of Long Lane. Post-medieval activity is represented by a large number of timber lined tanning tanks dating to the 19th century. [Au(abr)]

Casson, L London : Museum of London Archaeology Service, 2003, 49pp, figs, tabs, refs

*Work undertaken by:* Museum of London Archaeology Service

From the 3rd-4th February 2003 a final watching brief took place. Evidence of Roman occupation in the area was apparent. Aside from the substantial amount of residual pottery in later features, the truncated remains of three Roman ditches were excavated along with a Roman pit. A moderate amount of medieval pottery was recovered and although most of this was from within post-medieval contexts at least 2 pits and a ditch section could be dated to the medieval period. The bulk of the archaeology on the site represented activity during the post-medieval period including a 17th century quarry pit and a large number of 18th-mid 19th century pits and wells. [Au(abr)]

*Work undertaken by:* Museum of London Archaeology Service

Archaeological and geological deposits were recorded. A sherd of Gaulish amphora was recovered from a later of oxidised river mud, on which it appears vegetation had become established. Part of another amphora was found in a feature cut into the alluvium but abrasion indicates it may have been residual. A 16th century dump produced sherds of Frechen and Raeran stoneware from the Rhineland. Other post-medieval dumps overlying alluvial clay were found. A number of pits and ditches, likely dated to the post-medieval period, were observed with a well, a possible tanning pit, and a brick lined basement. [Au(adp)]

*Work undertaken by:* Pre-Construct Archaeology Ltd.

A sequence of deposits revealed during the excavation of tree planting pits and electrical cable trenches represent post-medieval activity at the site. The earliest layers represent soils of the church's graveyard and possible pathways associated with this phase of activity. Disarticulated human bone was recovered and later re-buried but no in situ burials or other archaeological features were revealed, except for the southern boundary wall for the churchyard which was demolished in the 1950s. The deposits were overlaid by a 20th century dumped layer. [Au(abr)]

Coles, S, Ford, S &amp; Taylor, A Reading : Thames Valley Archaeological Services, 2003, 32pp, figs, tabs, refs

*Work undertaken by:* Thames Valley Archaeological Services

Excavation in advance of redevelopment of the former White Swan public house revealed traces of Neolithic settlement and burial located on a sand and gravel bar beneath alluvium. A single grave cut into the natural sand contained a poorly preserved crouched inhumation, possibly a woman. The burial was accompanied by a fragment of a carbonated bowl, a flint knife and other struck flints. A radiocarbon date obtained from an oak retaining plank within the grave was calibrated to 3220-3979 BC. This burial was the earliest known from London. A nearby hearth contained 9 fragments of Early Bronze Age pottery. [Au(abr)]

*Work undertaken by:* Oxford Archaeology

The watching brief revealed the possible line of a part of a back-filled Civil War entrenchment towards the west part of the Palace Gardens. The site of the ditch feature compares reasonably well with the defensive line plotted between the redoubt and battery on Constitution Hill and the Court of Guard at Chelsey Turnpike. Traces of garden landscaping and alterations of probable 18th-19th century date were observed in the form of a garden or terrace wall. A substantial brick arched conduit or culvert was testimony to water management within the formal gardens in this period. [Au(abr)]
