Work undertaken by: The Archaeological Practice Ltd.

A watching brief of the development works on the site, adjacent to medieval town walls on the west side of Newcastle, revealed evidence in the form of a rough sandstone wall, for a possible foundation of a nineteenth century building. A number of ceramic and other finds, dated to the later medieval and early modern periods, attest to earlier phases of activity on the site. [Au(adp)]

An emergency watching brief was undertaken of a trench excavated unknowingly through the line of Hadrian's Wall. The landowner, Petro Designs Limited had failed to apply for Scheduled Ancient Monument consent, but having been informed of the offence, co-operated fully with Tyne and Wear Museums to ensure that a detailed record of the trench was made. This revealed that Hadrian's Wall had not survived in this location, but the northern end of the trench revealed soil horizons associated with post-Roman agricultural activity. [Au(adp)]

Work undertaken by: GeoQuest Associates

The earliest archaeological remains exposed were the remnants of three furrows, which would have formed part of a wider ridge and furrow field system of probable medieval date. The majority of archaeological features exposed were of post-medieval origin. Ten groups of sleeper impressions were recorded, probably representing a single track wagonway diverging into fan of sidings leading towards the former Hill Pit. Two phases of trackside ditches associated with the wagonway were recorded. [Au(abr)]
