Lisboa, IMilton Keynes : Archaeologica, 2003, 27pp, figs, tabs, refs

Work undertaken by: Archaeologica

A watching brief identified four ditches and two pits of unknown date. Roman pottery was present with roof and floor tiles which could have suggested the location of a Roman building in the vicinity of the site. A flint knife, dating to the Neolithic/Early Bronze Age, was also present on the site. [AIP]

Hunn, J Milton Keynes : Archaeological Services & Consultancy Ltd., 2003, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd

The site had been truncated in the past and the ground partly filled in with modern building rubble. There was some slight indications at the northern end of the site that the ground had been artificially reduced to extract either sand or clay. On the eastern side of the site a terraced section revealed a possible man made feature in the form of either a ploughing headland or boundary. [Au(abr)]

Saunders, G Baldock : Heritage Network, 2003, 5pp, figs

Work undertaken by: Heritage Network

One feature was observed during the groundworks, this was a metalled surface which ran across the new access road close to its northern end on a north-west to south-east alignment. It yielded no datable artefacts although post-medieval tile was observed on the topsoil that sealed it. The surface aligned with a public bridleway that ran across the scheduled area and joined a footpath that formed part of the Midshires Way. Despite the proximity of the site to the Deserted Medieval Village, no features or artefacts predating the post-medieval period were observed. [Au(adp)]

Work undertaken by: Oxford Archaeology

The watching brief revealed a number of features and deposits relating to various landscaping activities around the house. The principal discoveries were two walls that once formed part of the terrace arrangements in the grounds of the house and a former gravel path on the south terrace. The base of a statue was also noted. On the North Terrace there was evidence of semi-circular terrace features dating from the late 1600s. This feature had been sealed in c.1774 when a gravel drive or pathway was laid. [Au(abr)]

Fell, D Milton Keynes : Archaeological Services & Consultancy Ltd., 2003, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd

The watching brief revealed that the site did not contain large quantities of archaeological remains, but a post-medieval wall foundation was present at the north side of the site, reused as the footing of a later wall. The original foundation may have dated from the 16th or 17th centuries and may have formed part of the Tudor building. An assemblage of architectural fragments was collected. [Au(abr)]

Simms, M & Holmes, A Oxford : Oxford Archaeology, 2003, 39pp, colour pls, figs, tabs, refs

Work undertaken by: Oxford Archaeology

The excavations in the North Front revealed an alignment of three stone plinths on either side of the North Portico roughly respecting the present arcade. These structures may have been built during or after the construction of the North Front by the first Lord Cobham. A modern or earlier 19th century system of brick and stone culverts was found under the cobbled walkway behind the arcade. In the South Front the excavations revealed a clay lined tank possibly associated with the construction of Stowe House. This structure was built over and within the substantial deposits of made ground forming the South Front terrace constructed in the late 18th century by Earl Temple. [Au(abr)]

Foundations Archaeology Swindon : Foundations Archaeology, 2003, 56pp, figs, tabs, refs

Work undertaken by: Foundations Archaeology

A number of archaeological features are known from the study area, although these are predominantly clustered at the northern end of the route around and within West Wycombe Park. A possible prehistoric enclosure is known from the southern end of the route and two medieval findspots. A number of archaeological features were revealed during the course of the works. These included a single pit and a complex of ditches, gullies, pits/post holes and a trackway to the north of Toweridge Lane, which probably relate to the 'Celtic' field system previously identified. Dating evidence was extremely restricted but the evidence suggested that these features date to the Late Iron Age. [Au(adp)]
