Work undertaken by: Durham County Council's Archaeology Section

None of the inspection pits revealed archaeology, no traces of the Roman Road (Dere Street) were discernible, possibly because the remains of this road lay beneath the present day road. The layers revealed all seemed to be related to the modern construction of the road. [Au(adp)]

Still, D Durham : University of Durham, Archaeological Services, 2003, 16pp, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

Monitoring during topsoil stripping and excavation of foundations, revealed a buried soil layer, cut by three linear boundary features, including two ditches and a gully. Pottery recovered from these features dated to between the 11th and early 14th centuries. These were overlain by a layer of dumping, also containing large amounts of medieval pottery. A macro fossil assessment identified that these features represent accumulation of domestic waste. [Au(adp)]

ANON Newark : John Samuels Archaeological Consultants, 2003, 15pp, figs, tabs, refs

Work undertaken by: John Samuels Archaeological Consultants

The test pit monitoring confirmed that post-medieval construction on the site had impacted upon underlying deposits, resulting in numerous phases of development and cellaring. During the 18th century, the site formed part of Henderson's/Mackay's Carpet Manufactures up until its demolition in the 1990s. [Au(adp)]

Parry, Jim Barnard Castle : Northern Archaeological Associates, 2003, 7pp, figs, refs

Work undertaken by: Northern Archaeological Associates

The watching brief was conducted during the excavation of a series of trenches as part of the construction work for a water mains renewal scheme. Previous excavations within 100m of the trenches had identified phases of activity dating from an Anglian cemetery to the present day. In four of the trenches, stratified deposits were recorded, two trenches exposed deposits representing the former Anglian phase of activity. No archaeological features or finds were identified. White, L.Durham : Durham County Council's Archaeology Section, 2003, 3pp, colour pls, figs, refs

Work undertaken by: Durham County Council's Archaeology Section

Observation of a deep engineering test pit allowed for the observation of the foundations of Nevill's Tower. Unexpectedly, there appeared to have been a considerable amount of groundwork carried out to lay the foundations of the tower, and possibly the castle itself. The absence of a coal layer observed in a nearby borehole may account for the infilling, suggested that the coal may have been extracted and the resulting pit infilled with various materials for foundations. [Au(adp)]
