Knight, S Ditchling : Archaeology South-East, 2003, 14pp, figs, tabs

Work undertaken by: Archaeology South-East

A watching brief was undertaken during the groundworks associated with the refurbishment of the Mill Road builder's workshop for conversion to National Trust Warden's accommodation. Deposits of medieval and early post-medieval date were seen in association with masonry foundations possibly dating from the late 13th to early 14th century. Although a few loosely dateable artefacts were found closely associated with the wall foundations several pottery and china sherds and clay pipe stems were recovered from overlaying garden soil. Riccoboni, P Ditchling : Archaeology South-East, 2004, 19pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

An archaeological watching brief was undertaken during groundworks and the excavation of foundations for two new domestic dwellings at the rear of the site. The site is in the core of the former medieval town of Ditchling, East Sussex and was once occupied by a 19th Century brewery. At the eastern end of the site a medieval boundary ditch, two post-medieval pits and three undated post holes were recorded. The removal of a nearby barn floor as part of a conversion was monitored and no archaeological features or artefacts were recorded. [Au(abr)]

Griffin, N & Worrall, S Ditchling : Archaeology South-East, 2003, 15pp, figs

Work undertaken by: Archaeology South-East

An archaeological watching brief was maintained during the construction of a new detached house, garden, and alteration of an existing access road on land adjacent to Newbank, Main Road, Icklesham, East Sussex. Two pits containing evidence for industrial activity associated with the production of iron were recorded, possibly of Roman or Medieval date. However, no dateable artefacts were recovered from these pits. The only dateable artefacts were recovered from this site were fragments of 19th and 20th century tile and clay pipe, which were recovered from the topsoil. Evidence for a possible Roman road in the vicinity was looked for but not found. [Au(abr)]

Knight, S Ditchling : Archaeology South-East, 2003, 43pp, figs, tabs,

Work undertaken by: Archaeology South-East

An archaeological watching brief was undertaken during groundwork associated with the demolition of the site of the former Central Garage in Cinque Ports Street, Rye, East Sussex and also during the removal of subterranean fuel tanks at the site. Exposed were the foundations of the town's 14th century defensive wall, and several deposits of medieval and post-medieval date were observed and recorded in association with the wall. An upstanding Scheduled section of the town walls and the extant remains of a large c.1800 warehouse or workshop were also recorded [Au(abr)]

James, R Sussex : Archaeology South-East, 2003, 1p

Work undertaken by: Archaeology South-East

An excavation revealed a number of possible medieval and post-medieval features including: stone footings, boundary ditches, a cellar, drains, pits, yard and street surfaces and a well or cess pit. Finds included coins, a good assemblage of pottery and large quantities of building material including Flemish bricks. Environmental samples were taken of rich organic and cess deposits. [Au(adp)]

Griffin, N Ditchling : Archaeology South-East, 2003, 7pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

A watching brief was maintained during the erection of a stock fence. An assemblage of late 18th-19th century artefacts, two pieces of medieval iron slag and one of post-medieval blast furnace slag were recovered from unstratified deposits. A post hole revealed a darker topsoil. This is interpreted as indicating deliberate infilling and may have been associated with the 18th landscaping of the surrounding parkland. [Au(abr)]

Butler, C Ditchling : Archaeology South-East, 2003, 15pp, figs, tabs

Work undertaken by: Archaeology South-East

During the topsoil stripping and excavation of the reed beds, a number of shallow pits containing charcoal, together with a possible hearth were found. Numerous pieces of iron slag were also collected from the exposed ground surface. The presence of blast furnace slag suggests that this activity was post-medieval in date, and may have involved the drying or partial roasting of ore, and preparation of charcoal for use in the furnaces. [Au(abr)]
