Work undertaken by: Wessex Archaeology

A watching brief found the earliest remains included two Tudor walls. One of these was orientated in the same direction as the Tudor mansion and was associated with a brick floor surface with a drain between the wall and the surface. Make-up deposits of re-deposited natural clay containing fragments of brick in this trench appear to relate to the build up and levelling of the ground prior to the creation of this later 17th century farmyard. An infilled ditch was found in front of the stable block. Another infilled ditch contained mid 19th to early 20th century finds. [Au(abr)]

Work undertaken by: CKC Archaeology

Work at 16 and 17 north Cross Street recovered evidence for early post-medieval timber-framed buildings on both properties. Fragments of a rare 17th or early 18th century horticultural urn were found residually in a later pit. This urn had elaborate relief decoration and had a white external treatment to make it imitate stone. Its presence suggests that Gosport contained elaborate gardens in some of its back-land areas before about 1700, but pressure on space led to them being largely built over many of them during the 18th and early 19th centuries. Work undertaken by: Southern Archaeological Services

The watching brief demonstrated that very substantial remains of structures of all periods survived just below ground level. Part of the floor surface of the cast seasoning shed was found to be intact, as was the floor of the brewery, built in the late 18th century. Manholes and drainage features of various dates were found, but the detailed layout of the different phases remains obscure. Dumps of industrial waste were also noted. The earliest feature found was a well to the north of the pumphouse, dated to 1766; it was still accessible. [Au(abr)]

Currie, C Fair Oak : CKC Archaeology, 2003, 32pp, colour pls, figs, refs
Work undertaken by: CKC Archaeology

Groundworks have shown that the remains of another barn with brick walls on the south-east side of the existing structure had replaced an earlier post-medieval brick structure. Test pits within the former farmyard revealed very little stratigraphy, and the existing evidence seems to suggest that the medieval complex did not extend into the area under observation. It was therefore possible that the 13th century dovecote once stood on the north edge of the medieval complex, and the present build was part of an 18th century farmyard extension. [Au(abr)]

Crook, J Winchester : John Crook, 2003, 16pp, pls, figs, refs

Work undertaken by: John Crook

The works confirmed previous conjecture that the wall on the western side of the cloister garth followed and was built on the medieval wall at the rear of the western walk of the cloister. A stretch of this wall may survive upstanding to the north of the area of the present works. The wall containing the doorway which was widened during the present works was constructed on medieval footings shortly after the demolition of the old No. 11 in 1842. [Au(adp)]

Work undertaken by: Winchester Museums Service

On 28th April 2003, Winchester Museum Service carried out an archaeological watching brief at Orchard Cottage, Southwick Road, North Boarhunt during groundwork for the construction of a new barn/workshop. The site was thought to lie on or close to the line of the Roman road from Chichester to Bitterne. No evidence for the road or other archaeological features was observed. [Au]

Currie, C Fair Oak : CKC Archaeology, 2003, 18pp, figs, tabs, refs

Work undertaken by: CKC Archaeology

Only two cut features were observed. A pit close to the road contained occasional residual sherds of medieval pottery, but late post-medieval ceramics date the feature. Another similar pit to the rear of the stripped area proved to be a medieval rubbish pit. A moderate quantity of medieval coarsewares were recovered, including rim sherds from a jar and a bowl. A 12/13th century date for the feature was suggested. [Au(abr)]

Teague, S Winchester : Winchester Museums Service, 2004, 16pp, figs, tabs, refs

Work undertaken by: Winchester Museums Service

Topsail stripping revealed part of a shallow Roman ditch that is likely to have formed part of an enclosure system. The presence of noticeable quantities of Roman building material, both within the ditch, and across the site in general indicated the presence of substantial Roman structures in the vicinity of the site, although none were found. Traces of activity of probably prehistoric date were also found. [Au(abr)]

Work undertaken by: Winchester Museums Service

Between January 31st and 4th February 2003, Winchester Museums Service maintained a watching brief at the former Police House, 1 Buddens Road, Wickham. On commissioning, most of the groundwork for the new residential housing was complete, and the remaining groundwork comprised of footings for two new garages and a trench for an electric duct. No archaeological features were found within the limited areas that were observed. [Au]

The trenches had been dug to a shallower depth than originally proposed and this reduced the likelihood of exposing a significant archaeological deposits. The mortar rubble exposed in Trench One post-dated the construction of the brick built church. A dark soil in trench 2 predates the construction of the vestry and was therefore likely to have represented 19th century and earlier deposits associated with the graveyard. [Au(adp)]

WINCHESTER COLLEGE MUSIC SCHOOL

Winchester College Music School

Teague, S Winchester : Winchester Museums Service, 2003, 23pp, figs, tabs, refs

Work undertaken by: Winchester Museums Service

A number of medieval pits were recorded, dating from 12th-16th centuries, whose function is uncertain although several may pertain to the documented use of the site as an orchard in late medieval times. A ditch recorded on the western boundary of the site corresponds to a documented boundary that defined the rear extents on medieval properties flanking Kingsgate Street. [Au(abr)]
