CHURCH OF ALL SAINS, WOODCHURCH*An Archaeological Watching Brief During Groundworks Relating to the Construction of a Disabled Toilet at the Church of All Saints, Woodchurch, Kent*

Linklater, A Canterbury : Canterbury Archaeological Trust, 2003, 4pp, figs

Work undertaken by: Canterbury Archaeological Trust

In total a 65m length of drain trench was machine excavated. Though large numbers of headstones stood in the churchyard, some very recent, the deepest section of the trench ran roughly 0.45, westwards of a line of late 17th/early 18th century headstones. The remains of three articulated skeletons were exposed. [Au(adp)]

GODINGTON PARK, ASHFORD*An Archaeological Watching Brief at Godington Park, Ashford (Plots 153-168)*

Ward, A Canterbury : Canterbury Archaeological Trust, 2003, 6pp, figs

Work undertaken by: Canterbury Archaeological Trust

The absence of archaeological features in the form of field boundary ditches, pits and banks may have much to do with the difficulty of working the underlying geology for arable farming. The wet nature of the immediate area may also have been detrimental to the building of settlements. However, whether this was typical of the surrounding area as a whole was difficult to judge. [Au(adp)]

CT1 2QX**23 DANE JOHN, CANTERBURY*****An Archaeological Watching Brief at 23 Dane John, Canterbury***

Ward, A Canterbury : Canterbury Archaeological Trust, 2003, 5pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

It seems probable that 23 Dane John had been constructed within the infilled medieval ditch surrounding the early Norman Castle. However, the ditch was re-cut, probably in the fourteenth century and may have served as an open sewer to be replaced by the Black Ditch in the seventeenth century. In the eighteenth century a brick-lined well or cess pit was dug through the soft infill of the medieval ditch and it was that feature which was found in the recent structural examination of the property. [Au(abr)]

Linklater, A Canterbury : Canterbury Archaeological Trust, 2003, 10pp, figs

Work undertaken by: Canterbury Archaeological Trust

During the watching brief several details, mostly relating to the construction of the western tower, were observed and recorded. Primarily, it was discovered that the tower was constructed on top of a foundation, which was formed from two separate elements. The primary foundation consisted of large un-mortared chalk blocks. Secondly, a sub-foundation of four layers of mortared flints was constructed on top of the chalk blocks. Lastly two buttresses were added to the western ends of the north and south walls of the nave, clearly to aid in the support of the tower. The foundations of both buttresses were found to abut the sub-foundations of the tower, providing clear evidence that they were constructed after the building of the tower. [Au(adp)]

Linklater, A Canterbury : Canterbury Archaeological Trust, 2003, 4pp, figs

Work undertaken by: Canterbury Archaeological Trust

No evidence of archaeological features or deposits were observed throughout the entire foundation trenching. Towards the northern side of the site, the topsoil contained an increasing amount of crushed brick, and flint and mortar rubble. To the rear of the new buildings, a large circular, brick lined cesspit was revealed along the rear wall line of the southernmost property. A ceramic soil pipe surrounded by pea gravel was traced across the site towards the area of the previous cottage. [Au(adp)]

Linklater, A Canterbury : Canterbury Archaeological Trust, 2003, 8pp, figs, refs
Work undertaken by: Canterbury Archaeological Trust

Despite the comparatively shallow nature of the foundation trenches associated with this project, each clearly demonstrated the presence of archaeological remains just beneath the ground surface. The earliest cut features on this site consist of two, probable rubbish or cesspits, which appear to date from the mid to late 13th century. The discovery of two early medieval rubbish/cesspits to the rear of the existing property, which lay well back from the present road frontage, suggests that any possible related medieval structures that may have survived were very likely to be located close to the road frontage of Fairfield Road. Linklater, A Canterbury : Canterbury Archaeological Trust, 2003, 9pp, figs

Work undertaken by: Canterbury Archaeological Trust

Though the area of the new horse arena terrace falls close to two important archaeological sites, one medieval and the other of post-medieval date, most of the remains encountered area of relatively recent date. The initial date of the pond could not be established due to the process of cleaning the pond during its active life, thus the removing of any primary fills and datable evidence. The clinker path/roadway encountered, aligned across the site, was possibly of nineteenth century date and was probably created to transport domestic rubbish. The circular ring feature may have been of a early post-medieval date. [Au(adp)]
