HG5 PLZ**GATES HILL CAMP, MID GORGE, KNARESBOROUGH,***Gates Hill Camp, Mid Gorge, Knaresborough, North Yorkshire. Archaeological Walkover and Metal Detector surveys*

Buglass, J Barnard Castle : Northern Archaeological Associates, 2004, 19pp, colour pls, figs, refs

Work undertaken by: Northern Archaeological Associates

The purpose of the surveys was to involve the local community and to build upon data already surveyed. The walkover of the earthworks of Gates Hill Camp was not as detailed as anticipated due to the density of tree cover. The walkover survey did not reveal any additional features within the earthworks of Gates Hill Camp, but a small hollowway to the south of the camp was recorded. The metal detector survey recorded 15 finds, predominantly iron, mostly agricultural and all of post-medieval date. [Au(adp)]

Tomson, S Barnard Castle : Northern Archaeological Associates, 2003, 18pp, colour pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

A watching brief and topographic survey was concerned with groundworks associated with drainage works and associated civil engineering activity within two areas of relic mine working. The mines developed rapidly from the 1840's but were abandoned in 1888. Site A, within the Scheduled Monument, revealed information about a level part of the mine's drainage system. The topographic survey revealed a complex of mining and mining related features, including seven infilled shafts, the pylon bases for an aerial ropeway, a wheel pit and bob pit and the drainage level. Site B, just outside the Scheduled area, revealed that the surface deposits of the hillside were mainly composed of mining waste, and the topographic survey recorded the remains of four infilled shafts and erosion gullies. Dean, G York : York Archaeological Trust, 2004,

Work undertaken by: York Archaeological Trust

The watching brief monitored work during the excavation of trenches for services and the reduction of ground levels. The site had been disturbed by relatively modern groundworks, but some useful archaeological observations were made. The trenches within the eastern courtyard confirmed the presence of a substantial medieval ditch, possibly a property boundary and the trench from the western courtyard into Masonic Lane exposed deposits associated with a possible former cobbled yard surface. The stripping of the eastern courtyard exposed a post-medieval well, modified to take a lead pipe and traces of a possible structure associated with it. [Au(adp)]

The watching brief comprised observation of ground reduction and excavation of foundation trenches by mechanical excavator, prior to construction of the new flats. Towards the southern end of the property, strip medieval pitting activity and a later building were recorded below the recently demolished post-medieval structure. Also recorded was a full archaeological sequence for the adjoining property strip to the east, including medieval foundations and floors. The northern end of the property strip revealed deposits similar to those recorded during the evaluation phase of work, which included a possible foundation. Pottery and assorted finds from the medieval, post-medieval and early modern periods were recovered. [Au(abr)]

Anon Barnard Castle : Northern Archaeological Associates, NOT, 15pp, colour pls, figs, refs
Work undertaken by: Northern Archaeological Associates

Refurbishment of the Swaledale electrical transmission line, along a distance of 6.5km, consisted of the replacement of a series of electrical poles. These included poles on two Scheduled Monuments, known as Grinton Dykes, and other earthworks including a second pair of dykes, known as the Fremington Dykes. These may date from the Norse period. The archaeological observation of groundworks, revealed information about the structure of the dykes, demonstrating that the western dyke of Grinton Dykes had a revetment wall for at least 100m of its length. A possible settlement site was also recorded immediately to the east of the western dyke, and a group of possible Iron Age structures recorded towards the eastern end of the route. [Au(adp)]

Medieval to modern garden soil and made-up deposits overlaid natural yellow sands and gravels, into which a large ditch had been cut. This contained a small number of sherds of medieval pottery. A second, possibly medieval feature was also observed, although ground conditions precluded detailed recording. [Au(abr)]

Work undertaken by: University of Newcastle School of Historical Studi

Previous excavation in Quay Street have indicated the presence of rudimentary slipways at the foot of the cliff slope. No such slipways were found. The excavation and watching brief showed the site was infilled and levelled and subsequently built upon as evidence by a well and stone wall during the post-medieval period. [Au(adp)]

Work undertaken by: Birmingham University Field Archaeology Unit

The watching brief identified a 19th century layer of black silt containing residual seventeenth to 19th century ceramics. The animal bone assemblage suggested butchery and tanning had formerly taken place at Chapman's Yard. A large stone built reservoir was identified on the site, which appeared to have been contemporary with mid nineteenth century buildings. [Au(abr)]

An archaeological watching brief revealed a single pit of Neolithic date with an associated assemblage of grooved ware pottery and worked flint. A background scatter of flint was also recorded but no further evidence of Prehistoric activity on the site was observed. Further activity of late medieval and post-medieval date was represented by a structure consisting of post holes, floor surfaces, and a sleeper beam trench. In addition ditches, pits, post holes and further surfaces were recorded. [Au(abr)]

A watching brief was maintained in advance of the construction of a new access road and car park. The earliest activity was represented by a small group of pits or large post holes, dated to the Bronze Age by worked flints. Ditches associated with the extant earth banks represented boundaries between the properties of the shrunken medieval village of Throxenby. More significantly, an earthwork platform, provisionally identified as recent features (perhaps once relating to a tennis court). [Au(adp)]

An archaeological watching brief was undertaken during the excavation of foundation trenches for the construction of four town houses and associated garages at Manor Farm, Station Road, Church Fenton. With the exception of the north and east sections of plot 4, all the trenches exhibited natural layers of stratigraphy. The north and east section of plot 4 revealed layers of silt, most likely episodes of silting service trench was also undertaken. This service trench partially encroached on to the street frontage but no evidence of any earlier street structures was uncovered. [Au]

River Ouse at Kelfield, North Yorkshire. The Results of Archaeological Watching Brief on a Flood Defence Scheme

Bullen Consultants Stokesley : Bullen Consultants, 2003, 9pp, pls, figs, refs

Work undertaken by: Bullen Consultants, Tees Valley Archaeology

A stretch of ground was stripped mechanically to create a key trench for flood defences. The trench was excavated to a depth of between 0.60m and 0.80m, but no archaeological features or horizons were found. Similarly, no finds were encountered except modern material including bricks and related modern construction debris, probably associated with the construction of nearby housing. [Au(abr)]
