*Work undertaken by:* Wessex Archaeology

Recording noted that the webbing of the vault contained a number of worked Caen stones and some York flagstones. It seemed likely that some waste fragments of Caen stone were included when the vault was constructed. Other fragments of moulding and building stone may have been incorporated at this time from the demolition of the early 12th century apsidal chancel. [Au(abr)]

*Work undertaken by:* Gifford and Partners, Pre-Construct Archaeology Lt

A number of large roughly hewn limestone and sandstone blocks were uncovered to the east of the house. Two partially robbed out foundations aligned north-south and 2m apart were recorded to the west and south of the current manor house. No dating evidence was recovered from these features and their true alignments and extents remained unclear. [Au(adp)]

*Work undertaken by:* Archaeology South-East

Four evaluation trenches each measuring 25m in length were excavated to the north of the main barn complex. This revealed a single small, shallow undated pit/post-hole, two pieces of worked flint and a very abraded fragment of possible prehistoric pottery. Archaeological monitoring of topsoil stripping of a new access road revealed an east-west aligned undated linear feature and a small Medieval pit/post hole. Monitoring of service trenches in the courtyard revealed a undated linear feature. Works to reduce the ground level of the floor of the Grade II listed barn revealed foundation trenches, post pads and internal post holes associated with an earlier phase, possibly 17th century. [Au(abr)]
