ANON Barnard Castle : Brigantia Archaeological Practice, 2003, 7pp, figs, refs

Work undertaken by: Brigantia Archaeological Practice

Previous geophysical survey and trial excavation had identified a series of late prehistoric or Romano-British features across the site, but indicated a very poor level of survival. The watching brief, involved stripping the area of a small rectangular enclosure identified by previous work. The enclosure ditch was recognised, but found to be in an eroded state, the western side had entirely disappeared. No internal or external features were observed, nor were any artefacts recovered. [Au(adp)]
