Ward, A Canterbury : Canterbury Archaeological Trust, 2003, 6pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The project consisted of observing the removal of concrete and cobbles in the yard area. The only point worthy of note was the presence of a brick wall between the garages and structure 2. During the course of the project photographs and notes were made of the foundations of the structures either side of the dead end alley. [Au(adp)]

The cellar is probably contemporary from its outset with the seventeenth century standing structure. Earth floors of post-medieval perhaps late medieval structure survive at ground level in the area between the two cellars. [Au(adp)]

Ward, A Canterbury : Canterbury Archaeological Trust, 2003, 4pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The whole area of the development appeared to have been subject to relatively modern disturbance and build-up. Even assuming they existed, it seems highly unlikely that any medieval remains of the hospital survive anywhere on the unexcavated parts of this plot of land. There was enough evidence, in the form of variation in height of the hill-wash to show that the cellar had been dug through this material rather than inserted into a terrace of earlier date. Work undertaken by: Archaeology South-East

A watching brief maintained during topsoil stripping revealed three features showing evidence of burning, two small undated pits, and one larger medieval pit. Metal detecting carried out over the stripped area recovered several items including half a medieval coin. [Au(abr)]

ME1 3AU**FORT BRIDGEWOODS, ROCHESTER*****An Archaeological Watching Brief at Fort Bridgewoods, Rochester***

Ward, A Canterbury : Canterbury Archaeological Trust, 2003, 5pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief produced little of archaeological interest. The position of the (assumed) ditch as within many other features relating to the fort could have been plotted from plans and maps of the area. That it was backfilled relatively recently was already known. [Au(abr)]

The project consisted of reducing the level of an area and the auguring of six pile holes prior to the insertion of a lift. Layers of clay may have represented anthropogenic change but this could only be proven through excavation. [Au(adp)]

ME1 1TL**ROCHESTER CATHEDRAL CRYPT, ROCHESTER*****An Archaeological Examination of Two Installation Pits (Pits A and B) Associated with the Reordering of Part of Rochester Cathedral Crypt***

Linklater, A Canterbury : Canterbury Archaeological Trust, 2003, 8pp, figs,

Work undertaken by: Canterbury Archaeological Trust

A record of two pits associated with the construction and routing of pipe and cable runs within the south-western area of the crypt of Rochester Cathedral was made. In Pit A, examination of crushed mortar revealed that it was similar to that used in the construction of the existing ruins of the cloister. Examination of the sections revealed that Pit B had largely cut through the backfill of a recently inserted brick lined soakaway/drain. [Au(adp)]
