*Work undertaken by:* York Archaeological Trust

Archaeological observation of alteration works within the church. A number of archaeological features were uncovered. The floor surfaces were removed and a large quantity of disarticulated human remains was revealed as well as an earlier doorway with an in situ door, the partial remains of possibly two articulated skeletons and a drain and substantial limestone footings. [Au(adp)]

Reeves, B &amp; Johnson, M York : York Archaeological Trust, 2003, 23pp, figs, tabs, refs

*Work undertaken by:* York Archaeological Trust

The watching brief found that the majority of the deposits recorded were of post-medieval and modern date, two areas of the site were excavated to Roman levels. Although no in situ deposits were seen, the Roman deposits contained considerable quantities of dumped demolition material, including fragments of box flue and combed box tile, tegula and imbrex tile fragments. This material was suggestive of a high status Roman building in the near vicinity. [Au(adp)]

*Work undertaken by:* York Archaeological Trust

Archaeological observation was made of the excavation of underpinning trenches inside and outside the building. No archaeological evidence was recorded in the outside trench, trench one. Evidence uncovered in trench two, within the building, suggested that there were earlier buildings than the standing 17th century building, probably medieval in date, occupying the plot. The sill wall, beam and post holes recorded suggested a timber frame construction. The deposits identified as floor layers were presumably associated with the earlier buildings; contexts 1005-1010 and 1017-1018 predated the suggested sill, context 101 and contexts 1001-1004 post-dated it. A programme of archaeological investigation followed an evaluation excavation in 2001, one large open area, Trench 11, c.420m square, was opened up to further investigate indicated areas of archaeological significance. Another Trench 11, 10m x 10m, was excavated to determine the level of survival of archaeological remains below one of the demolished buildings. In trench 10, the excavation of modern foundations and drains had destroyed much of the archaeology, but there were hints of post-medieval activity. Trench 11 produced substantial and potentially important remains of the Roman and medieval periods. This included Roman and medieval ditches, a medieval oven and a well preserved waterlogged 14th century barrel well. There was also evidence for waterlogged organic deposits of the medieval period. The medieval features may have been associated with St. Nicholas's hospital. [Au(adp)]

*Work undertaken by:* York Archaeological Trust

The excavation revealed parts of a prehistoric landscape that included at least one Neolithic pit and curvilinear ditch, a pit alignment of probable Bronze Age or Iron Age origin that was later redefined by a broad shallow cut. A cluster of pits and small post holes together with two small ring gullies, may have been of prehistoric date, though were located within the limits of a Roman camp. Substantial parts of this early-mid 2nd century AD Roman camp were surveyed and excavated, which proved to have been laid out with considerable geometric accuracy. The camp appeared to have been short lived, with parts of the rampart backfilled into the ditch, and was probably a mustering camp. [Au(adp)]

*Work undertaken by:* York Archaeological Trust

Archaeological observation of building modifications for disabled access and repairs to the timber framed structure, revealed a sequence of deposits that related to post-medieval and modern activity outside the standing buildings. These included a brick paver surface dated to the early part of the 17th century, associated with an extension built onto the medieval hall, a c.1700 brick culvert, 19th century outbuildings, yard and drains, and 20th century demolition, renovation and construction. Most of the repairs to the timber framing were minor, and insights into the structural history of the building were limited. [Au(adp)]
