11-13 NORTHGATE STREET, CHESTER

Ground Penetrating Radar Investigation of 11-13 Northgate Street, Chester

Reynolds Geo-Sciences Ltd. Mold : Reynolds Geo-Sciences Ltd., 2003, 25pp, pls, figs, refs

Work undertaken by: Reynolds Geo-Sciences Ltd.

An interpreted position for the known undercroft area, beneath no. 13 Northgate Street, was provided using radar data from the eastern end of the premises. Features interpreted as representing beams supporting the external raised pedestrian walkway were identified east of the modern shop front. A second area thought to represent the undercroft of No. 11 Northgate Street was identified in the south-east corner of the premises. It was thought uncertain whether this cellar area extended east beyond the modern shop front. The entrance to the undercrofts was not positively identified, although investigation of an interesting bright rectilinear feature had been suggested. [Au(adp)]

A small complex of responses close to New Farm was of clear archaeological interest and formed a rectangular enclosure with numerous ditches and pits. Linear anomalies and a sinuous response may have been archaeological in origin. However, the latter was probably a former stream channel. Throughout the survey, the data contained numerous trends characteristic of ploughing. [Au(abr)]

Detailed survey confirmed the findings of the scan and revealed a few anomalies of archaeological interest. there were some large rea of ferrrous noise, probably from dumping of modern debris. Some linear and pit-type magnetic anomalies have been identified as possibly being of archaeological intrrest, but a large number of anomalies mapped were almost certainly related to agricultural drainage systems. Work undertaken by: Archaeological Services WYAS

A magnetic scanning and detailed gradiometer survey was carried out in advance of a proposed clay extraction development. The results identified anomalies associated with ridge and furrow activity, and general linear and pit type features which were interpreted as modern. [Au(adp)]
