Shiel, D Bradford : GSB Prospection, 2003, 35pp, figs, refs

Work undertaken by: GSB Prospection

The gradiometer survey recorded a number of anomalies of archaeological potential. They mainly comprised linear responses of varying levels of magnetic strength that could have related to former field systems. However, it was likely that some were due to more recent drainage features. Groups of pit anomalies were recorded that may have represented settlement remains. Three possible hearth-type responses or anomalies indicative of pits containing strongly enhanced material were recorded. The resistance survey identified possible insubstantial remains of walls or earthen banks near the vicus of the Roman fort. [Au(abr)]

Work undertaken by: GSB Prospection

A scanning gradiometer survey followed by a targeted detailed survey was carried out on the site. Linear and pit like anomalies were identified. [Au(abr)]

GSB Prospection Thornton : GSB Prospection, 2004, 11pp, figs, refs

Work undertaken by: GSB Prospection

A scanning and detailed gradiometer survey was restricted due to poor ground conditions and spreads of building material. Some crop marks were investigated and ditch type features were identified in this area. A former boundary was also identified in the north of the study area. Other anomalies were unclear and could have been related to agricultural practice. It was possible, that due to the poor conditions, that some archaeological features were not detected by the survey. [Au(adp)]

WILLINGTON QUARRY

Geophysical Survey at Willington Quarry, Willington, Derbyshire

Butler, A Northampton : Northamptonshire Archaeology, 2003, 7pp, figs, tabs

Work undertaken by: Northamptonshire Archaeology

A gradiometer survey was carried out on the site. Very weak magnetic anomalies were detected, which possibly represented a ditch field system, enclosure, ring ditch and several pits. [Au(adp)]

SMR primary record number: 760
