Biggins, J Newcastle-upon-Tyne : TimeScape Surveys, 2003, 27pp, colour pls, figs, refs

Work undertaken by: TimeScape Surveys

A number of anomalies were detected during this survey, most of which were thought to be modern, but some might have represented possible prehistoric enclosures and medieval ridge and furrow. [AIP]

The "all weather surface" may have obscured the survey, and the survey confirmed the significant modern landscaping and development of the area in relation to its use. [Au(adp)]

Work undertaken by: GSB Prospection

Scanning showed generally high background levels of magnetic enhancement. The north-eastern portion of the site contained modern debris lying on the surface and large warehouses to the south affected the response nearby. Detailed survey recorded ridge and furrow cultivation in both areas, this corresponded to the earthworks visible on the ground. A small circular anomaly may have some archaeological potential, however, the weak and unclear nature of the response detracted from such interpretations. [Au(abr)]

Work undertaken by: University of Durham, Archaeological Services

The survey provided very clear evidence for a number of probable archaeological features at the site, including at least one enclosure and a possible earlier phase of un-enclosed occupation. [Au(adp)]

Noel, M, J Castleside : GeoQuest Associates, 2003, 10pp, figs,

Work undertaken by: GeoQuest Associates

A geophysical survey was commissioned with the main aim of mapping continuations east and west of the precinct boundary located in 2001, together with any associated medieval features. A number of significant archaeological targets were located. These included sections of a possible precinct wall west of the gatehouse, and along the western boundary of the field that extended south of the Abbey cottages. A set of curvilinear ditches, or terraces, and possible building debris, were also located.

Robertson, F Bradford : GSB Prospection, 2003, 11pp, figs, refs

Work undertaken by: GSB Prospection

A detailed survey was carried out in two areas which covered the majority of the site. A clear pattern of ridge and furrow cultivation was revealed, as well as a small circular anomaly that may have had some archaeological potential. [Au(adp)]

Noel, M, J Durham : Pre-Construct Archaeology Ltd., 2004, 18pp,figs

Work undertaken by: GeoQuest Associates

The geophysical survey detected magnetic field anomalies over much of the site were found to be of moderate intensity. Good evidence for the continuation west of a colliery tramway, and an intriguing pattern of discrete, intense magnetic anomalies, partly in a grid pattern, were recorded. [Au(adp)]
