Shiel, D Bradford : GSB Prospection, 2003, 37pp, figs, refs

*Work undertaken by:* GSB Prospection

Few indications of archaeological remains were encountered at the first two sites (A and B). Anomalies of interest comprised of weak linear responses and groups of pit type responses that were equally likely to have modern origin. A ring ditch and evidence of a possible settlement were detected immediately to the west of the A4 road at site C. in addition, the course of a possible Roman road may have been determined at the same site. [Au(adp)]

*Archaeological periods represented:* RO, UD
