COLD FURROW, LYONSHALL

Geophysical Survey of a Crop-Mark Site, Cold Furrow, Lyonshall, Herefordshire

Young, T P Cardiff : GeoArch, 2003, 7pp, figs

Work undertaken by: GeoArch

A magnetic gradiometer survey was carried out at a crop-mark site. This revealed features with varying degrees of magnetic differentiation. All of the forms were linear and with central positive anomalies, and therefore considered ditches. The study confirmed the presence of an enclosure identified through aerial photographs. This also contained a square feature within its confines. [Au(abr)]
