Gater, J & Urmston, B Bradford : GSB Prospection, 2003, 13pp, figs, refs

Work undertaken by: GSB Prospection

The small area available and the presence of modern services limited the gradiometer survey. No anomalies of archaeological interest were discovered. The resistance surveys detected numerous linear trends and a possible area of archaeological interest. These include a Roman drain or culvert, possibly associated with the Roman villa in the scheduled area, and a possible Roman wall.

Robertson, F Bradford : GSB Prospection, 2003, 10pp, figs, refs

Work undertaken by: GSB Prospection

The results clearly showed the lines of the excavation trenches and some of the high resistance anomalies corresponded to rubble/cobble features noted within the trenches. The limit of the activity to the south and north-eastern edge appeared to both have been established also. [Au(abr)]

Robertson, F Bradford : GSB Prospection, 2003, 12pp, figs, refs

Work undertaken by: GSB Prospection

The survey was carried out over and around backfilled excavation trenches that were clearly identifiable in the results. Other anomalies recorded did not form any notable archaeological pattern. [Au(abr)]
