BARKING TOWN CENTRE, CLOCKHOUSE AVENUE

An Archaeological Watching Brief at Barking Town Centre Regeneration, Clockhouse Avenue, London Borough of Barking and Dagenham, Essex

Pickard, C London : Pre-Construct Archaeology Ltd., 2004, 13pp, figs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

The watching brief comprised the observation and recording of seven trial pits, four boreholes and three cone penetration test pits. Dating material from a trial pit in this area suggested that it was located over either a quarry/pit of 17th-19th century date, or that residual artefacts were included in the backfill of a trench dug while clearing the site of human burials prior to the construction of the library. Fragmentary bone, which may be human, was found indicating at least the possibility that undisturbed burials lay within the study area. [Au(abr)]

Wragg, E London : Pre-Construct Archaeology Ltd., 2004, 21pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

The earliest deposits encountered were natural gravels and brickearth. Overlying these deposits was a layer of possibly colluvial clayey sandy silt. Sealing these deposits was a later of probable ploughsoil which contained post-medieval ceramic building material. Cutting these deposits and features in the south and east of the site was a large feature filled with silty water lain material which may have represented the presence of a pond. All the deposits were sealed by 20th century brick rubble, made ground and concrete. [Au(abr)]

Swift, D London : Museum of London Archaeology Service, 2005, 34pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The trench ran between the road surface along its whole length, with the exception of a stretch along the junction of Blomfield Street and Liverpool Street, where it crossed beneath a pavement 'island'. A quantity of disarticulated human bone, along with parts of two articulated skeletons, were excavated at the western end of Liverpool Street. This almost certainly derived from the 'New Cemetery', or 'Bethlem Church Ground' which was in use between 1569 and 1720. Some of the bone showed signs of autopsy, dissection or amputation. Most of the deposits viewed in the watching brief consisted of garden soil and various dumped refuse deposits and demolition debris containing pottery, glass and CBM dating from the 17th to 20th centuries. Cowie, R London : Museum of London Archaeology Service, 2004, 18pp, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

Work on trial pits for tree pits was monitored. A test pit opposite the front entrance to 16 Old Bailey revealed a wall made of brick dated to the 16th or 17th century. The wall probably belonged to a building fronting onto the former road of Little Old Bailey, which appears on 16th to 18th century maps. Early maps of the area show that the site was densely covered by buildings that occupied the wedge shaped plot of land. [Au(abr)]

HARRIS CITY ACADEMY, SOUTH NORWOOD HILL (I)

An Archaeological Watching Brief on Geotechnical Test Pits at Harris City Academy, South Norwood Hill, London, SE25, London Borough of Croydon

Bazley, K London : Pre-Construct Archaeology Ltd., 2004, 20pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

Ten test pits were excavated for geotechnical examination of soil formations. One of the main interests for the watching brief related to the location generally being a quarry and brickworks in the early to mid-19th century. Some of the lower deposits contained small fragments of brick and carbonaceous material, which may have been remnants of the earlier perceived use of the site as a brickworks. No archaeological features were observed. [Au(abr)]

RICARDS LODGE SCHOOL, LAKE ROAD, WIMBLEDON
Report on an Archaeological Watching Brief at Richards Lodge School, Lake Road, Wimbledon, SW19 7HB
House, M Twickenham : AOC Archaeology Group, 2004, 19pp, figs, tabs, refs
Work undertaken by: AOC Archaeology Group

During the watching brief, a large rectangular feature measuring 55.15m east-west by 34.58m north-south was identified. Map regression evidence suggests that this was the robber cut and demolition material from Marlborough House (built 1733), which burnt down and was demolished in 1785. This building was contemporary with the tunnel which linked it to servant's quarters located somewhere to the northeast of the area of development. Four boxed or arched brick culverts were also recorded. These were constructed using the same brick types present in both the tunnel and the demolition material and were likely part of the water and waste management system for Marlborough House and gardens. BURFORD WHARF, STRATFORD
Report on an Archaeological Watching Brief at Burford Wharf, Stratford, London Borough of Newham
House, M Twickenham : AOC Archaeology Group, 2004, 31pp, figs, tabs, refs
Work undertaken by: AOC Archaeology Group

The majority of archaeological preservation occurred to the far west of the site where natural shelving towards the river protected the early dock structures from later development and land levelling. It was likely that the earliest phase of wharf development recorded could have occurred as a direct result of the sites industrial development and the production of calico. The site continued to function as a wharf well into the 19th century and wharf structures appeared to respect the existing property boundaries when it was superseded by the development of a mill. Higher in the archaeological sequence were a series of timber boxes drains and an elm log water pipe, probably associated with the industrial management of this 19th century mill development. CUMBERLAND SCHOOL SPORTS HALL, BARKING ROAD, CANNING TOWN
Cumberland School Sports Hall, Barking Road, Canning Town, London, E16. Archaeological Excavation and Assessment Report

Wessex Archaeology London : Wessex Archaeology, 2004, 14pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

Four separate features were found during the excavation. Three of these appeared to be natural marshland channels and the fourth, a post-medieval drainage ditch. The post-medieval activity in the area appears to have been curtailed by an episode of flooding which was represented by a thick layer of alluvium the overlaid all features. [Au(abr)]

LAND TO THE EAST OF BEDDINGTON FARM ROAD, CROYDON

Land to the East of Beddington Farm Road & South of Stirling Way, Croydon. London Borough of Sutton. Archaeological Post-excavation Assessment

Potter, G London : Compass Archaeology, 2004, 43pp, colour pls, figs, tabs, refs
Work undertaken by: Compass Archaeology

The investigation exposed two substantial ditches of late Iron Age to Roman date. The ditches evidently formed boundary and/or drainage features within an agricultural landscape. Botanical remains included a small assemblage of charred cereal grain and chaff, plus possible spelt wheat. The radiocarbon dating of the large southern ditch - 100 BC to AD 70- also supports the idea of continuous agricultural activity from the later prehistoric to Roman periods, as previously suggested from excavations on the site of the Villa. There was also some evidence for earlier prehistoric activity, in the form of a small assemblage of struck flints. Although residual, and only broadly datable to the Mesolithic or Bronze Age, this group was comparable with others that were recorded in the area.

JUBILEE LINE NEW SIGNALLING EQUIPMENT ROOM

An Archaeological Watching Brief on Geotechnical Test Pits at Jubilee Line New Signalling Equipment Room, Stratford Market Depot, Stratford, London E15, London Borough of Newham

Mulligan, D London : Pre-Construct Archaeology Ltd., 2004, 36pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

To the north of the site was an alluvial deposit from which two struck flints were recovered. In the base of test pit 111 an undated ditch cut was observed truncating the alluvial deposit at a depth of 1.2m. In test pit 113 a layer of mortar and chalk covered the base of the test pit and appeared to be a surface. In the section, red brick was laid on top of this layer and this was covered by a layer of tile that suggested this to have been the remains of a structure of mid-18th century date. This possible floor was seen at a depth of 1.10m below ground level. A series of possible later gravel floors and occupation surfaces was revealed covering a demolition later. There was a large amount of post-medieval deposits in all the test pits in the form of made ground. No structures associated with the priory were revealed although early post-medieval bricks which may have originally come from the complex were found to be reused in a later structure. [Au(abr)]

Leary, J London : Pre-Construct Archaeology Ltd., 2004, 29pp, figs, tabs, refs
Work undertaken by: Pre-Construct Archaeology Ltd.

Although terracing for the basements of the existing buildings led to the truncation of archaeological layers; deep cut features such as rubbish pits and cesspits were recorded. The earliest features to survive were seven Middle Saxon rubbish pits, recorded in six test pits to the west of the site, whilst later features, dated to the 17th century, comprised brick-lined cesspits and a brick wall, also recorded in the western half of the site. The location of the features suggested that the western half of the site had a higher potential for the recover of archaeological remains. [Au(abr)]

CUBITTS YARD, JAMES STREET

Cubitts Yard, James Street, London, WC2. City of Westminster. Post-excavation Assessment and Updated Project Design

Telfer, A London : Museum of London Archaeology Service, 2004, 61pp, colour pls, figs, tabs, refs

Work undertaken by: Museum of London Archaeology Service

The excavation in the courtyard largely revealed occupation deposits and cut features dating to the Middle Saxon period. A weathered brickearth living surface overlying the natural brickearth, however, may have dated to the Iron Age. The earliest Saxon activity involved two inhumations, the first aligned north-south and the second east-west. The second burial was contained within the remains of a coffin and included probable spear, knife and shield remains. Overlying the burials was a series of building and occupation layers possibly representing two properties and at least three phases of occupation. There were characterised by metallised surfaces, brickearth floors and occupation debris cut by numerous stake holes. A post-medieval sump and drain, overlain by demolition layers and make-up, sealed the sequence below the brick floor of the Victorian courtyard. [Au(abr)]
