LAND OFF STATION ROAD, WEST AUCKLAND*Land off Station Road, West Auckland, County Durham. Report on an Evaluation Excavation and Watching Brief*

Ottaway, P, Antoni, B, & Smith, J York : York Archaeological Trust, 2004, 19pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

Excavation of two trenches allowed for an embankment associated with the railway to be identified, but revealed little trace of any railway tracks or other structures except for a concrete cable box. A watching brief on the north-east side of the site failed to add any significant information on the railway and showed that a mound was largely composed of modern material. [Au(abr)]

PARK VIEW SCHOOL, CHESTER-LE-STREET*Archaeological Monitoring During Geotechnical Works, Park View School, Chester-le-Street, Co. Durham*

Harrison, K & White, L Durham : Durham County Council Archaeology Section, 2004, 5pp, figs

Work undertaken by: Archaeology Section, Durham County Council

Archaeological monitoring was undertaken during geotechnical test-pitting. Roman deposits were identified containing a small piece of opus signinum (Roman concrete), with brick and tile, grey ware pottery (including a rim sherd) coal and slag. Artefacts were found in four of the five test pits and appeared to correspond with the theory that the site lay over the defensive ditches of a Roman fort. Further archaeological mitigation was recommended in the form of a field evaluation. [AIP]

FORMER ECLIPSE BRICKWORKS, CROOK

Former Eclipse Brickworks, Crook, Co. Durham. Archaeological Watching Brief

University of Durham, Archaeological Services Durham : University of Durham, Archaeological Services, 2004, 43pp, figs, refs

Work undertaken by: University of Durham, Archaeological Services

A watching brief revealed the remains of brick works, one phase pre-dating 1939 and another phase post-dating 1939. The earlier brickworks were recorded including nine circular brick kilns along with associated building walls, flues and working floors. Two of these brick kilns were sectioned and provided additional information regarding its form and construction. Bricks and residues were sampled, and a number of finds collected. A stone built store was partly revealed at the northern side of the site. This had been truncated on the north side by 20th century opencast mining. It was recommended that the results of this work be published in an appropriate journal of industrial archaeology. [Au(adp)]

Garrett, F Newcastle-upon-Tyne : Tyne & Wear Museums Archaeology Department, 2004, 21pp, colour pls, figs, refs

Work undertaken by: Tyne & Wear Museums Archaeology Department

A watching brief was conducted during ground disturbing works associated with the renovation of the garden and to try and establish if any original features of the Georgian garden survived below the

modern garden. After the initial demolition of the modern garden, a WWII Covered Trench Shelter was uncovered. Unfortunately no garden features were uncovered, however, medieval and later contemporary pottery of the same period as the garden was located at a low level. The work provided evidence that concluded the original level of the 18th century garden did not survive and building insertions within the central garden area and by Cross Street removed crucial evidence of the early garden foundations. An Archaeological Excavation on Hexham Road, Throckley, Tyne and Wear. Summary Report and Data Assessment

Pre-Construct Archaeology Ltd. Durham : Pre-Construct Archaeology Ltd., 2004, 32pp, pls, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological excavation was undertaken in advance of improvements to the sewerage/drainage arrangements associated with the redevelopment as part of a condition attached to Scheduled Monument Consent (in the Hadrian's Wall corridor). The truncated remains of Hadrian's Wall were recorded. The Wall foundation was constructed with flat sandstone slabs and sub-angular blocks, bonded with clay. This foundation extended through both excavation trenches for c. 2.80m north-south. A single course of the southern face of the Wall was recorded in Trench 7, built directly upon the foundation stones. A burnt layer was found directly underneath the foundations indicating ground clearance before the Wall was constructed. [Au(adp)]

Work undertaken by: University of Durham, Archaeological Services

Archaeological excavation and a partial watching brief were undertaken in advance of a proposed development. A 13m long well preserved section of the foundations to Hadrian's Wall was located. The wall foundations were two courses of stonework high and 2.44m wide which was typical for that section of the wall. The Wall ditch survived across the full width of the site containing very few finds were recovered except for post-medieval material in the uppermost fills. Three rows of pits had been dug across the berm to the north of the wall. The pits were oval in plan and all three rows ran parallel to the wall. A couple of the pits possibly contained post settings. The findings of this work were going to warrant a full publication. [Au(adp)]

Throckley Middle School, Throckley, Newcastle-upon-Tyne. Archaeological Excavation and Watching Brief

Stobbs, G Newcastle-upon-Tyne : Tyne & Wear Museums Archaeology Department, 2004, 45pp, colour pls, figs, refs

Work undertaken by: Tyne & Wear Museums Archaeology Department

An excavation and watching brief was carried out in response to an application for Scheduled Monument Consent to undertake works associated with a residential scheme. The area was within the corridor of Hadrian's Wall (SAM 28(21)). This was the third phase of work on this site. The area excavated had been subject to heavy disturbance from the post-medieval school buildings (since demolished) on the site. However, it was possible to examine the upper fills of the Roman Wall Ditch, which only contained diagnostic finds dating to the post-medieval period. The fill had environmental samples taken, as did a stone culvert of medieval date. The watching brief revealed no significant archaeological deposits. [Au(adp)]

Dougherty, E Newcastle-upon-Tyne : Tyne & Wear Museums Archaeology Department, 2004, 8pp, figs, tabs

Work undertaken by: Tyne & Wear Museums Archaeology Department

An archaeological watching brief was required as the laying of an electricity cable crossed the projected line of the Vallum. An east-west orientated cut feature 15.30m wide was located at 103 AOD which may have represented the remains of the vallum ditch associated with Hadrian's Wall. [Au(adp)]

Work undertaken by: Tyne & Wear Museums Archaeology Department

A watching brief was undertaken during the demolition of a petrol filling station and removal of petrol storage tanks. The work provided a useful overall view of the ditch area and the soils located by, and further north of the Wall area. Trench A confirmed the location of the Hadrian's Wall north ditch and therefore the approximate location of the Wall under the east-west aligned Hexham Road. [Au(adp)]

St. Nicholas' Churchyard, West Boldon, South Tyneside. Archaeological Recording and Watching Brief

Garrett, F Newcastle-upon-Tyne : Tyne & Wear Museums Archaeology Department, 2004, 17pp, colour pls, figs, refs

Work undertaken by: Tyne & Wear Museums Archaeology Department

A programme of archaeological recording together with a watching brief was undertaken within the grounds of a Churchyard. A wall was recorded that had a modern upper build, but the lower third, with in situ mortar, was of an undated earlier build. During the demolition of the initial 5m stretch of churchyard wall, it was found to be in a very poor state of repair. As a consequence more wall fabric was demolished for safety reasons, this additional wall area was also recorded. Unfortunately no other dating material was found. Removal of tree stumps did not disturb the cemetery. [Au(adp)]

An Archaeological Watching Brief at 3 Station Road, Fulwell, Sunderland

McKelvey, J Newcastle-upon-Tyne : Tyne & Wear Museums Archaeology Department, 2004, 6pp, figs

Work undertaken by: Tyne & Wear Museums Archaeology Department

A watching brief was undertaken during the construction of an extension to the existing building. The site was of potential archaeological interest as it was within the presumed extent of Fulwell medieval village and because of its proximity to prehistoric burials on Atkinson Road. However, no deposits of archaeological significance were located as the foundation trenches for the extension did not penetrate beneath post-medieval levelling deposits. [Au(adp)]

Work undertaken by: University of Durham, Archaeological Services

An open area excavation was conducted in advance of a proposed housing development. Further evidence of the Linthorpe Pottery industry and the Sun Brick Works were revealed. Evidence for the brick works (1860-1879) consisted of a number of brick clamps and layers of coal and slag dust with brick fragments. The Linthorpe Pottery industry was attested to with the remains of a substantial brick-built gas-fired kiln and complex of associated structures. Structures associated with another part of the process were also recorded. Pottery and kiln waste was also present as well as a back-filled cellar containing waterlogged wooden artefacts. [Au(adp)]

The Archaeological Practice Ltd. Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2004, 55pp, pls, colour pls, figs, tabs, refs

Work undertaken by: The Archaeological Practice Ltd.

A programme of archaeological monitoring, involving on-site inspections, advice and photographic recording was carried out as part of consolidation works at Mitford Castle. Mitford is one of the major castles of Northumberland as well as being one of the best preserved, dating to the 12th and 13th centuries. The programme of consolidation and repair was initiated in response to the evident deteriorating condition of parts of the structure. This involved clearing vegetation from wall tops, core and facing, including the removal of trees and bushes. The wall faces were re-pointed whilst the exposed core was rough raked, grouted and capped. [Au(adp)]

10 York Road, Whitley Bay. Archaeological Watching Brief

The Archaeological Practice Ltd. Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2004, 14pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

A watching brief was undertaken during the excavation of foundation trenches for the construction of a two storey building. Three features were noted, all probably associated with the recently destroyed building on the site. The first was a wall foundation running east-west across the northern edge of the site; the second was a wall running east-west across the middle of the site; the third was a coal bunker. A basic photographic record was made of these features, but none of them merited additional recording measures. It was concluded that no features of cultural heritage significance were disturbed by the development works. However, the possibility that remains of archaeological significance survive on the site should not be discounted. [Au(adp)]

Corchester Lane, Corbridge. Archaeological Watching Brief and Evaluation

The Archaeological Practice Ltd. Newcastle-upon-Tyne : The Archaeological Practice Ltd., 2004, 23pp, colour pls, figs, refs

Work undertaken by: The Archaeological Practice Ltd.

A watching brief was carried out during groundworks to install a new footpath running from the west of Corbridge to the English Heritage visitor centre on the site of Corbridge Roman Fort. Two features were recorded. The first appeared to be an area of field clearance/levelling and comprised river-rounded cobbles. The second was a section of wall which was recorded as standing up to four courses high, containing a worked Roman stone in the fabric. The lack of finds made them impossible to date however the wall was considered to most likely be late Roman or medieval in date, whilst the cobbled area was most probably post-medieval in origin. THE LIMES, WESTGATE

The Limes, Westgate, County Durham. Archaeological Watching Brief

University of Durham, Archaeological Services Durham : University of Durham, Archaeological Services, 2005, 11pp, figs

Work undertaken by: University of Durham, Archaeological Services

A watching brief was conducted during the renewal of a water main. Topsoil stripping revealed remains of a possible post-medieval wattle fence and two post-medieval culverts. A small number of

19th and 20th century pottery sherds and animal bones were recovered. No further archaeological monitoring of the site was required. [Au(adp)]

MOORSHOLM, REDCAR AND CLEVELAND

Moorsholm, Redcar and Cleveland. Archaeological Excavation

University of Durham, Archaeological Services Durham : University of Durham, Archaeological Services, 2004, 28pp, figs

Work undertaken by: University of Durham, Archaeological Services

An archaeological excavation was conducted in advance of a proposed development. The excavation provided evidence of non-intensive activity on the site within the medieval period. There was no significant evidence of structures or of major field or plot divisions, although a sunken cobbled surface could have been associated with an early structure. A metalled surface suggested a yard area, possibly associated with buildings which may have existed further back from the road. There was evidence of

frequent changes in routes across the open ground. This may have represented periodic or repeated changes and episodes of repair to traverse wet ground. [Au(adp)]

STREET HOUSE FARM, LOFTUS, EAST CLEVELAND

The Initial Excavation of a Cropmark Enclosure at Street House Farm, Loftus, East Cleveland

Sherlock, S York : Stephen Sherlock

, 2004, 30pp, pls, figs, refs

Work undertaken by: Stephen Sherlock

An excavation was undertaken on the site of a series of cropmark enclosures as part of a programme of research into Iron Age settlement by members of Teeside Archaeological Society. The excavation trench was sited to sample two ditches, one of which appears to be an Iron Age enclosure whilst to the west a second ditch has been dated to the Roman period. A small assemblage of pottery was recovered along with some evidence for jet working and evidence for crop consumption was recovered. The seeds from the primary fill of the Iron Age enclosure have been sent for AMS dating to give an indication of a possible date for the enclosure. The radiocarbon age for the sample is a two sigma calibration of Cal BC 380-160 (Beta 200337). [Au(abr)]
