An Archaeological Watching Brief on Groundworks Between 9 & 11 Priory Lane, Bracknell, Berkshire

Robertson, J Woking : Surrey County Archaeological Unit, 2004, 6pp, figs, refs

Work undertaken by: Surrey County Archaeological Unit

Although no features of archaeological interest were identified during the watching brief, nine sherds of Roman pottery of late 1st/early 2nd century date, and one possible piece of prehistoric struck flint were recovered from the resulting spoil heaps. The recovery of finds provided evidence for possible prehistoric and Roman activity in the vicinity. [Au(abr)]

Locke, A Lewes : Lewes Archaeological Group, 2004, 5pp, figs, tabs

Work undertaken by: Lewes Archaeological Group

An archaeological watching brief was undertaken during groundworks for a garage. The site was of archaeological interest since it lay close to recently excavated Roman villa, a pagan Saxon cemetery and a probable medieval manor house. It was possible that the garage might have cut into the bank of a probable Roman road connecting Glynde to the South Downs. Cobwebs cottage was of an indeterminate age but probably dated back to at least the 18th century. Three sherds of medieval pottery, along with the late 19th/20th century building and domestic debris were recovered. A light-grey layer 30-40cm from the surface at the south end of the site may have represented silting in an earlier roadside ditch. However, there were no finds to suggest whether or not this was associated with the supposed Roman route. [Au(adp)]

BATTLE ABBEY SCHOOL, BATTLE

An Archaeological Evaluation and Watching Brief at Battle Abbey School, Battle, East Sussex

James, B Ditchling : Archaeology South-East, 2004, 20pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

A watching brief along the lawn during the excavation of foundation pads for a temporary classroom and a service trench revealed two previously unrecorded stretches of undated cobbled yard surface. An evaluation of three machine-excavated trenches north of the school revealed the exterior face of the west wall of the demolished abbey church, together with mortar screeds interpreted as construction deposits. Elsewhere on site, a number of successive levelling deposits of medieval date were cut by three pits fill with demolition rubble, two of probable 16th century date relating to post-dissolution sand extraction, one of later date possibly associated with early 19th century levelling during the construction of the adjacent stables. Later garden soils sealed these rubble deposits, and included part of a Victorian fountain. Finds were sparse but included disarticulated pieces of human bone and a medieval broad-head arrowhead. [Au(abr)]

BOUNDARY HOUSE, CASTLE STREET, WINCHELSEA

An Archaeological Watching Brief at Boundary House, Castle Street, Winchelsea, East Sussex

Knight, S Ditchling : Archaeology South-East, 2004, 20pp, figs, tabs, refs
Work undertaken by: Archaeology South-East

Deposits of medieval and early post-medieval date were seen in association with a substantial masonry foundation dating from the 14th century and a later less substantial foundation of possible 16th century date. The base of an intruded 18th or early 19th century privy was also revealed. These archaeological deposits were in turn buried beneath a deep disturbed soil, the possible result of later gardening activity and a 20th century extension. [Au(abr)]

GLESSAM (GLOSSAMS PALACE), BECKLEY

Excavations at Glesham (Glossams Place), Beckley, 2004. A Summary of Progress So Far

Woodcock, A Hastings : Hastings Area Archaeological Research Group, 2004, 20pp, pls, figs, refs
Work undertaken by: Hastings Area Archaeological Research Group

An ongoing excavation at the site of prehistoric, Roman and medieval archaeological remains was summarised in this report. The 2004 excavations revealed more evidence of the structure of the medieval manor house (with an associated moat) within the site. Complex foundations were uncovered at the west end of the building which revealed more information on the original layout of the building. Evidence of stone robbing was also recorded during these excavations. Further work for 2005 was planned, mainly in the form of analysing the results and working towards a publication. [AIP]

WINDMILL COTTAGE, SALTCOTE LANE, PLAYDEN

A Watching Brief at Windmill Cottage, Saltcote Lane, Playden

Wetherill, E Hastings : Hastings Area Archaeological Research Group, 2005, 6pp, figs

Work undertaken by: Hastings Area Archaeological Research Group

A watching brief was carried out during groundworks for a development. The site was in an archaeologically sensitive area and also fell within a Scheduled Ancient Monument. The site was formerly occupied by the Playden Windmill until 1952 when it was sold and dismantled. Three trenches revealed the remains of a brick wall, probably representing a building or extension to a cottage before the First World War. The site also produced many roof tile fragments and general ceramic building material. Modern rubble and modern brick fragments were also identified. [AIP]

A MEDIEVAL SALT WORKING SITE AT PEVENSEY

A Medieval Salt Working Site at Pevensey. A Metal Detecting Survey

Unknown Pevensey : Unknown, 2004, 3pp, figs, refs
 Work undertaken by:

A metal detecting rally was held in a field (and an adjacent field) after a previous field walking survey and groundworks for a new barn. The main field was flat except for a large oval mound about 40m in diameter about 2m high which was assumed to be a salt mound. Other salt mounds were scattered nearby along the Pevensey Haven. The fieldwork identified a number of metal artefacts and pottery dating from the 13th to the 17th centuries. [AIP]

DARWELL RESERVOIR TO HAZARD'S GREEN PIPELINE

An Archaeological Watching Brief on the Darwell Reservoir to Hazard's Green Pipeline, East Sussex

Riccoboni, P Ditchling : Archaeology South-East, 2004, 24pp, figs, tabs, refs
 Work undertaken by: Archaeology South-East

This field was stripped under archaeological supervision. Archaeological remains were discovered. These included two ditches (one Roman) and an undated linear arrangement of charcoal stains. The route of the pipeline went through the centre of the post-medieval iron working forge of Kitchenham. In advance of a topsoil strip two trial trenches were excavated across the most important banks of the forge threatened by destruction from the pipeline. These trenches revealed two sections of

archaeological interest. Trench 1 across the southern bank of the pond and trench 2 across the northern bank. In addition to this archaeological monitoring and section recording took place when the trench for the pipe was excavated. This section revealed a bank near the southern side of the pond. Three features thought to be post-medieval hearths or cooking pits were discovered. [Au(abr)]

Two Hearths Discovered at Norden Farm, High Hurstwood, East Sussex

Chuter, G & Woodcock, ALewes : Archaeology Department, East Sussex County Council, 2004, 7pp, colour pls, figs

Work undertaken by: Archaeology Department, East Sussex County Council

A burnt area was reported as being exposed during the course of digging a 'wildlife-scrape'. The subsequent site visit identified that there were two burnt features. One was half-sectioned and consisted of a shallow steep sided hollow. The feature contained no finds, however a single Mesolithic core was recovered from the material that had been removed from the site to the farmyard. It was probable that both features represented fires set in the bases of pits which had been backfilled whilst the fires were still burning. Samples of the charcoal and burnt clay were retained for further analysis. [AIP]

PREHISTORIC OCCUPATION IN THE UPPER CUCKMERE VALLEY

Evidence for the prehistoric occupation of the Upper Cuckmere Valley

Seager Thomas, M Lewes : East Sussex County Council, 2004, 4pp, tabs, refs

Work undertaken by: East Sussex County Council

A large assemblage of prehistoric flintwork (some 670 items) was recovered on the surface of two fields. Neither fields contained natural flint and the assemblage dated from the Early Mesolithic to the Early Bronze Age. The earliest group included Mesolithic/Neolithic blades, blade tools and flake cores. The later group included Neolithic/Early Bronze Age worked flint, consisting of a bi-facially flaked laurel-leaf point, a thumb-nail scraper, part of a flaked axe, the butt-end of a polished axe and barbed and tanged arrowheads. The location and distribution of the finds was also examined. The article concluded that the 'Cuckoo Trail' assemblage was important because of the long-term interest it showed in the area during prehistory. [AIP]

BEGGARWOOD LANE, HATCH WARREN, BASINGSTOKE*Report on the Archaeological Excavation at Beggarwood Lane, Hatch Warren, Basingstoke, Hampshire*

Melikian, M Twickenham : AOC Archaeology Group, 2004, 15pp, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

The brief was to re-excavated human remains that had been disturbed during the machine excavation of a geotechnical pit on the site. The geotechnical pit in which the remains were found had been partially back-filled. The 'spoil' from the excavated pit was sorted by hand and any human bone found was recovered. The back-filled soil in the pit was then removed by careful mechanical excavation and was hand sorted by human bone. No evidence of in situ human remains or a grave cut were identified. The only finds identified on site was unstratified, disarticulated human bone. The bone underwent osteological analysis and was found to represent the remains of a young adult female. [Au(abr)]

GARAGE SITE, HIGHCLERE

An Archaeological Watching Brief at the Garage Site, Highclere, Hampshire

Berkshire Archaeological Services Newbury : Berkshire Archaeological Services, 2004, 7pp, figs, refs

Work undertaken by: Berkshire Archaeological Services

An archaeological watching brief was carried out during the construction of 14 dwellings on the site of a former garage and adjacent land in the village of Highclere. This report represented the results of work carried out from 2003-2004. A recent study suggested that this part of Highclere may have been occupied prior to the 19th century. The results of the watching brief were entirely negative. This may partly have been a product of previous construction on the site. However, this had not affected the southern end of the development area, where the lack of evidence for past settlement almost certainly reflected a genuine absence, rather than the result of differential survival. STAUNTON COUNTRY PARK

Staunton Country Park. Refurbishment of Model Farm. Report on an Archaeological Watching Brief

Higgins, P Southampton : Southern Archaeological Services Ltd., 2004, 35pp, figs, tabs, refs

Work undertaken by: Southern Archaeological Services Ltd.

A watching brief and low level building record were carried out during refurbishment of parts of the Model Farm. Cobbled surfaces and foundations of former structures were found, including one almost complete outline, and several wall footings, probably belonging to a building shown on a 18th century map. The existing farmhouse was shown to have been built in several phases and some of its fittings were dated; they suggested an earlier date for the farmhouse than previously thought. Records were made of the roof structures of the 'granary' building and farmhouse. [Au(adp)]

STAUNTON COUNTRY PARK, HAVANT

Staunton Country Park, Havant. Excavation of the Pine Pits and 'Melon Ground' in the North Garden.

Dean, S Southampton : Giffords and Partners Ltd., 2004, 28pp, colour pls, figs, refs

Work undertaken by: Gifford & Partners

Excavation work in the area of the Pine Pits and what was thought to have been the Melon Ground (within the North Garden) was undertaken. This included three trenches and two small window samples to the North and South of the extant Pine Pit. Results revealed one relatively well-preserved pit, one simple frame structure and the possible robbed remains of a second frame. Another structure was also identified, this could have been a boiler house or ancillary garden building. The 'melon house' was thought to have fulfilled a variety of roles possibly constructed during the early 19th century. [Au(adp)]

Berkshire Archaeological Services Aldermaston : Berkshire Archaeological Services, 2004, 9pp, figs, tabs, refs

Work undertaken by: Berkshire Archaeological Services

An archaeological watching brief was carried out during topsoil stripping across the Phase III clay extraction site. The results included finds of Middle-Late Bronze Age and Middle-Late Iron Age pottery, along with further finds of worked and burnt flint. The only feature was a single ditch passing through the site on a south-west to north-east alignment. This produced a small assemblage of Roman pottery, probably dated to the middle 3rd century AD. Although the results were indicative of a late prehistoric to Roman settlement, the low level of finds and the lack of structural evidence suggested that the extraction site was on the periphery of the main focus of settlement. OLD HOUSE HOTEL, THE SQUARE, WICKHAM

An Archaeological Watching Brief at the Old House Hotel, the Square, Wickham, Hants.

CKC Archaeology Fair Oak: CKC Archaeology, 2004, 16pp, figs, refs

Work undertaken by: CKC Archaeology

An archaeological watching brief was carried out during groundworks for a building extension. The Old House Hotel was 18th century in date at the north end of the former market square in of the former medieval market town of Wickham. Excavation for the work, in the an area of old garden, failed to recover any significant archaeological features or residual finds dating from about before 1760. The only feature seen was a modern ceramic pipe leading to a modern soakaway. The area was a distance from the street and this most likely explained the lack of residual medieval pottery. [Au(adp)]

ORAM'S ARBOUR, WINCHESTER

Archaeological recording at Oram's Harbour, Winchester, Hants.

CKC Archaeology Fair Oak: CKC Archaeology, 2004, 22pp, figs, refs

Work undertaken by: CKC Archaeology

Archaeological recording was carried out during groundworks for a children's play area in Oram's Harbour Recreation Ground. Excavations cutting down to chalk bedrock were few. What little evidence was recovered seemed to suggest that prehistoric and Roman features were concentrated on the far eastern side of the play area. Trenches on the western side of the site may have been too close to the ramparts to have attracted occupational activity. Part of a large Iron Age pit was excavated and was cut by a smaller Roman pit, dated by tile fragments. A second Roman pit was also observed nearby cutting through a possibly earlier, Iron Age feature. [Au(adp)]

Soderbaum-Beach, L Southampton : Giffords and Partners Ltd., 2004, 33pp, colour pls, figs, tabs, refs

Work undertaken by: Gifford & Partners

An archaeological watching brief was undertaken during groundworks for the re-development of Treasury Court. The report also incorporated results from previous archaeological work carried out between 2002 and 2003. The project was successful in that the sense that the large majority of the archaeological deposits pre-dating medieval and post-medieval garden soil were preserved in situ which was identified as one of the planning requirements of the re-development. The 2004 watching brief further confirmed that the site had great archaeological potential and that it was of national importance to preserve the archaeology in situ for future research. [Au(adp)]

WEEKE MANOR, WINCHESTER*Weeke Manor, Winchester. Excavation and Watching Brief Report*

Morris, J & Higgins, P Southampton : Southern Archaeological Services Ltd., 2004, 46pp, pls, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services Ltd.

An archaeological field excavation and watching brief were carried out. This consisted of an open area excavation of 700m² and a watching brief during groundworks on the rest of the site. The excavation resulted in the discovery of a number of Early and High Medieval features as well as features of unknown date. The early medieval features were possible rubbish pits and ditches that may have acted as boundary markers, possibly associated with the nearby deserted medieval settlement. The function of the linear features was unknown. Later medieval features did not appear to respect the earlier features which may have indicated the boundaries of the early medieval period were out of use by the high medieval period. There was a low level of archaeological activity on the rest of the site. [Au(adp)]

WINCHESTER CATHEDRAL

Winchester Cathedral. Report on an Archaeological Watching Brief During the Installation of Uplighting Units

Dr. John Crook Winchester: Dr. John Crook, 2004, 11pp, colour pls, figs, refs

Work undertaken by: John Crook

Small excavations for uplighters at the west end of the north nave aisle of Winchester Cathedral provided significant information about the techniques used when the Romanesque nave was transformed into the present Perpendicular structure in the 14th/early 15th century. The findings had important implications for any plans to extend this system of lighting in the future. It was argued that any such future works should be preceded by an accurate measured digital survey of the nave floor, much of which had survived unaltered since the late middle ages. [Au(adp)]

BIRCHMORE TO CHILLERTON LINK MAIN WATER PIPELINE***Birchmore to Chillerton Link Main Water Pipeline. Archaeological Watching Brief***

Trott, K Newport : Kevin Trott Archaeological Services, 2004, 7pp, figs, refs

Work undertaken by: Kevin Trott Archaeological Services

A programme of archaeological works were carried out during the construction of a link main water pipeline. Six sites of scattered archaeological material were identified, ranging in date from the Late Neolithic to the Early Bronze Age. Two sites also produced a scatter of medieval material and a Roman element was discovered at another. Post-medieval material was also recovered. [Au(adp)]

LAND TO THE REAR OF BRADING WAX WORKS MUSEUM, BRADING***An Archaeological Watching Brief on Land to the Rear of Brading Wax Works Museum, Brading, Isle of Wight***

Trott, K Newport : Kevin Trott Archaeological Services, 2005, 51pp, colour pls, figs, refs

Work undertaken by: Kevin Trott Archaeological Services

An archaeological investigation was undertaken during groundworks for a single storey extension to a museum. The site lay within the historic core of Brading town. The work identified residual Mesolithic flint work and Bronze Age occupation surfaces. This was subsequently sealed by medieval activity which included occupation layers, domestic pits and a gully which appeared to have contained industrial material. Post-medieval and modern activity on the site was represented by further domestic pits, occupation layers, two probable boundary walls, a brick lined well, a chalk latrine and large deposits of garden soil. [Au(adp)]

MERSTONE WASTEWATER PIPELINE***Merstone Wastewater Pipeline. Archaeological Watching Brief***

Trott, K Newport : Kevin Trott Archaeological Services, 2004, 6pp, figs, refs

Work undertaken by: Kevin Trott Archaeological Services

A programme of archaeological works were carried out during groundworks for a wastewater pipeline. The entire 700m route of pipe trenching was monitored for archaeology. This work identified five sites of scattered archaeological material, spanning a date range from prehistoric to post-medieval. No archaeological features or deposits were encountered anywhere along the pipeline. All artefactual material was located in the walkover survey. The earliest phase of archaeology encountered was prehistoric flint, dating to from the Late Neolithic to the Early Bronze Age. One site also produced Roman, medieval and post-medieval material. [Au(adp)]

THORLEY WASTEWATER PIPELINE

Thorley Wastewater Pipeline. Archaeological Watching Brief

Trott, K Newport : Kevin Trott Archaeological Services, 2004, 5pp, colour pls, figs, refs
Work undertaken by: Kevin Trott Archaeological Services

A programme of archaeological works was carried out during the construction of a wastewater pipeline. The entire 1510 metres of pipeline route was monitored for archaeology. This work identified three sites spanning a date range from the medieval to post-medieval periods. No archaeological features or deposits were encountered anywhere along the pipeline. All artefactual material was located in a walkover survey. The earliest phase of archaeology encountered was an assemblage of Saxo/Norman and medieval material including several sherds of pottery. A post-medieval element was also encountered consisting of ceramic sherds, clay pipes and occupational debris. [Au(adp)]

WOLVETON MANOR

Watching Brief on the Moated site 100m North-east of Wolveton Manor, a Scheduled Ancient Monument

Timmins, W.M. Isle of Wight : W.M. Timmins, 2004, 1pp
Work undertaken by: W.M Timmins

A watching brief was carried out during dredging work on the moat of Wolveton Manor, a Scheduled Ancient Monument (26840). The moat had been dredged some years earlier but had silted up due to the presence of a land drain that allowed silt to flood in from surrounding fields. A silt trap had been fitted recently, away from the monument, to prevent this happening in the future. The only find of archaeological significance was a flint scraper which came from the spoil heap created during the previous moat excavation. [Au(adp)]

BOYS HALL MEDIEVAL MOATED SITE, ASHFORD ORBITAL PARK, SEVINGTON, ASHFORD

An Archaeological Watching Brief at Boys Hall Medieval Moated Site, Ashford Orbital Park, Sevington, Ashford, Kent

Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 14pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief involved a number of visits to observe a series of works to improve the appearance of the moated site and to aid in the conservation of the site which is a Scheduled Ancient Monument. The project involved the watching and safe guarding of the following activities: the removal of a dumped motor vehicle and metal tank from the moat, the construction of a self-binding footpath, the clearance of weeds and rubbish from the moat and tree/hedge pruning. A final visit to the site confirmed that no new features had been revealed during clearance work, though the existing ditches and embankments related to the monument were more clearly defined. BRISLEY FARM, ASHFORD

Brisley Farm (Pightlands), Ashford, Kent. A Post-excavation Assessment Report on the Archaeological Excavations 2004, With Proposals for Publication

Stevenson, J Ditchling : Archaeology South-East, 2004, 71pp, pls, figs, tabs, refs
Work undertaken by: Archaeology South-East

The excavation revealed evidence of earlier prehistoric, Iron Age and medieval date, in the form of scattered flintwork, pits, post holes, ditches/ gullies, a stone surface and possible building features. The Iron Age evidence seems to represent the remains of fields and is in part directly related to similar features uncovered during the adjacent Area 7 Brisley Farm excavation. The next phase of activity occurs in the 13th century with fields, enclosures and possible occupation evidence. The activity intensified during the 14th century where there was good evidence of domestic occupation; stone yards, an enclosure and possible building features. Apart from some limited post-medieval remains and a World War II bomb crater, there was no further archaeological activity identified. [Au(abr)]

ST. MARGARET'S CHURCHYARD, HOTHFIELD*An Archaeological Watching Brief in the Churchyard of St. Margaret's Church, Hothfield, Kent*

Linklater, A Canterbury : Canterbury Archaeological Trust, 2004, 6pp, colour pls, figs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during the hand excavation of a new drain trench and associated soak away pit located towards the east end of the southern portion of the churchyard. No articulated burials were encountered during the work. This could have been due to the burials being deeper than the excavation. Fragments of disturbed human bone in a single deposit below the topsoil was typical of the sort of soil horizons recorded in churchyards which are formed by the continual rotation of the soil through constant burial over a long period. The examination of the current church spire revealed it to be dated between the mid 16th and mid 17th centuries, later in date to the church. [Au(adp)]

RECVLVER TOWERS, RECVLVER*An Archaeological Watching Brief at Reculver Towers, Reculver, Kent*

Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 6pp, figs

Work undertaken by: Canterbury Archaeological Trust

This watching brief was carried out during the excavation of a trench to carry electricity cables to supply light to the Reculver Towers. The Towers and the Roman fort surrounding the church are a Scheduled Ancient Monument (27). The cable ran across the monument east to west at a point 55m west of the Roman east gate. It then ran parallel to and to the south of the pathway and adjacent small wall in a westerly direction for about 83m. The trench was then angled north-west and below the graveyard of the church. Due to the shallow nature of the trench, only topsoil deposits consisting of made ground were encountered. At no time were any stratified archaeological deposits or features encountered and the only damage to the monument was to modern grass levels and re-deposited topsoil. [Au(adp)]

152 CRABBLE HILL, DOVER

An Archaeological Watching Brief at 152 Crabble Hill, Dover, Kent

Shand, G Canterbury : Canterbury Archaeological Trust, 2004, 4pp, figs

Work undertaken by: Canterbury Archaeological Trust

The Watching Brief was carried out during foundation trenches for a new residential building. All the deposits above the natural chalk levels were modern to a depth of 1.6m below present ground surface. This suggested that the area within and around the development area had been reduced in level and then material mainly chalk, brought back onto the site and levelled. This disturbance could have been landscaping associated with the cutting of the railway lines. Given the depth of disturbance in the area it was seen as unlikely that the buried archaeological resource would have been affected by the development. [Au(adp)]

Interim Report on Excavations at 'Eden Roc', Bay Hill, St. Margaret's-at-Cliffe, Kent

Parfitt, K Canterbury : Canterbury Archaeological Trust, 2004, 8pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The excavation was carried to record previously identified archaeological deposits ahead of the erection of a new dwelling. Previous evaluation trenching revealed evidence of a damaged prehistoric round barrow and Anglo-Saxon inhumations. The 2004 excavations revealed a total of 14 graves, 12 of which were excavated. Eight Anglo-Saxon graves were identified, six were excavated, grave goods were sparse they included four iron knives, an iron pin fragment and an iron buckle, no associated structural iron work was identified. Half the circuit of a now destroyed round barrow which was levelled in the 1920's was recorded, there was evidence for a central, primary burial. The ditch was broken by an entrance causeway. Six contracted prehistoric inhumations, all satellite or secondary barrow burials, were identified. Other finds included: 700 pieces of prehistoric flintwork, 39 sherds of mostly prehistoric date, animal bones from the fill of the barrow ditch and a few marine shells. [AIP]

Linklater, A Canterbury : Canterbury Archaeological Trust, 2004, 6pp, figs

Work undertaken by: Canterbury Archaeological Trust

The Watching Brief was carried out during the construction of an extension on a Listed Building. The relatively shallow nature of the new foundation trenches meant that a bulk of the deposits excavated consisted largely of recent garden soils. At the base of all three trenches, a thin occupational deposit over a patchy clay floor clearly indicated the location of a domestic building. Evidence of robber trenches were also recorded, the evidence appeared to indicate the former presence of a medieval stone rubble built domestic building which appeared to have been partially demolished prior to the construction of the earliest phase of The Vicarage in the 15th century. 84A BANK STREET, MAIDSTONE

An Archaeological Watching Brief at 84a Bank Street, Maidstone, Kent

Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 7pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during the construction of a new stairwell forming part of a programme of works to convert an existing warehouse into flats. During the work no archaeological deposits or artefacts were observed, despite the proximity of known archaeology in the area and the site falling within the core of a medieval town. It is possible that during the construction of the Warehouse that ground levels may have been reduced at some stage, removing any archaeological deposits. However the very limited nature of the groundworks at the site leaved interpretation open, a much larger area would need to be investigated to verify this. [Au(adp)]

BLACK HORSE PUBLIC HOUSE, PILGRIMS WAY, THURNHAM

An Archaeological Watching Brief at the Black Horse Public House, Pilgrims Way, Thurnham, Kent

Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 4pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out over two days during machine clearing of the site and the excavation of foundation and service trenches in advance of a proposed extension. Although the site was thought to have archaeological potential no archaeological remains were observed. From the limited area exposed, it appears that the Anglo-Saxon cemetery does not quite extend into the development area. Any further development in the general area should have nonetheless been subjected to archaeological coverage as clearly there was significant archaeology in the close vicinity. [Au(adp)]

An Archaeological Watching Brief at Greenway Cottage, Greenway Court Road, Hollingbourne, Maidstone, Kent

Parker, S & Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 17pp, colour pls, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during groundworks for the refurbishment of the 16th century cottage. Other remains encountered during the work consisted of evidence for an earlier brick building. The function of the earlier building was unclear but it clearly necessitated the removal of water via an internal drain. It was possible that it may have been a brewhouse or something similar, further documentary research may determine the function. [Au(adp)]

HYTHE TO FOLKESTONE COASTAL PROTECTION SCHEME, SHEPWAY

An Archaeological Watching Brief of the Construction of Five Rock Structures (Rock Structures A-E) Forming Part of the Hythe to Folkestone Coastal Protection Scheme, Shepway, Kent

Linklater, A Canterbury : Canterbury Archaeological Trust, 2004, 9pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during the construction of five rock structures along a section of the Kent coastline that had been gradually developed over the last fifteen hundred years, the general nature of this project suggested that the available archaeological resource along the shoreline would have been extremely limited. This was largely due to the nature of the removal and deposition of beach material and any recently deposited archaeological material, coupled with the unstable nature of the geology immediately beside the coastal strip between the Hythe and Folkestone. [Au(adp)]

LAND TO THE FRONT AND REAR OF 'MELAINE' FAIRFIELD ROAD, NEW ROMNEY, SHEPWAY

An Archaeological Watching Brief on Land at the Front and Rear of 'Melaine' Fairfield Road, New Romney, Shepway, Kent (Phase I and Phase II)

Linklater, A Canterbury : Canterbury Archaeological Trust, 2004, 10pp, figs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out on two separate occasions, 26/02/03 and the 11/05/04 in advance of two extensions on the front and rear of the house. Two sub-circular features, possibly cess or rubbish pits were located in the base of the south-western trench to the rear of the house. These were sealed by a deposits containing medieval pottery sherds dated to AD 1250-1325, later sealed by a yard surface. The front of the property also had two pit type features, possibly of similar use to the rear two. The pits suggested that there may have been a medieval property in the vicinity of the site. Therefore any future development along the Fairfield Road frontage should have been subject to a watching brief as a minimum level of recording. [Au(adp)]

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during machine clearing of the site in preparation for construction and formation of parking areas, and the cutting of foundation/service trenches for two semi-detached houses. During the initial site clearance a thick layer of 20th century modern rubbish mixed with topsoil, indicating that the site had been subject to fly-tipping for considerable time. This topsoil and rubbish lay directly over natural chalk. No archaeological deposits were observed on the site, clearly the site had been subject to extensive disturbance in the recent past. Hart, P Broadstairs : Trust for Thanet Archaeology, 2004, 20pp, pls, figs

Work undertaken by: Trust for Thanet Archaeology

An archaeological watching brief was undertaken and revealed evidence for Iron Age, Roman and post-medieval activity. A group of four pits could have represented elements of a shallow terrace and timber structure dating to the Roman period. The fills of the pits contained residual Iron Age pottery in addition to Roman ceramics and quantities of beach flint, which appeared to have been used as building stone. A tunnel and shaft on site may have been associated with the Napoleonic era fort. Two further modern pits were encountered. [Au(adp)]

Wessex Archaeology Salisbury : Wessex Archaeology, 2005, 7pp, colour pls, figs, refs

Work undertaken by: Wessex Archaeology

The only feature of antiquity identified was a small ditch, perhaps a field or enclosure boundary, which was likely to be medieval in date. This ditch contained a few abraded sherds of late prehistoric pottery, but the rich and well-preserved charred plant remains indicate a post-Roman date and is indicative of settlement activity in the vicinity. A Saxon date for the feature was not discounted, and a coin minted in the early 8th century was found in the same area of the site as the ditch. [Au(abr)]

LAND TO THE REAR OF 67-71 HIGH STREET, TONBRIDGE***An Archaeological Watching Brief to the Rear of 67-71 High Street, Tonbridge, Kent***

Linklater, A Canterbury : Canterbury Archaeological Trust, 2004, 10pp, figs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during groundworks for a new extension to the rear of a house. Though most of the new drainage trenches failed to penetrate below the level of modern deposits, the new foundation trenches penetrated through a series of mainly dump deposits that sealed the underlying natural clays. Sandwiched between the dump deposits were the remains of a single clay floor covered by an occupation deposit. Pottery sherds recovered from deposits both immediately above and below the clay floor indicated it was laid sometime between AD 1225/50 and AD 1525/50. [Au(adp)]

An Archaeological Watching Brief at Wouldham Court Farm, Wouldham, near Rochester, Kent

Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 7pp, figs

Work undertaken by: Canterbury Archaeological Trust

This watching brief was originally intended to observe machine cutting of foundation and service trenches for the new dwellings on the site. However the initial stripping consisted mainly of removal vegetation and just a small amount of topsoil. This soil was made ground from the former use of the land. The ground was then made up again and the foundations cut into this land, thus not impacting on underlying deposits. However, a deep trench was observed being excavated near the river by Southern Water, no archaeological remains were located on any part of the site. [Au(adp)]

An Archaeological Watching Brief at the Former Russell's Garage, the Street, Sissinghurst, Kent

Willson, J & Parker, S Canterbury : Canterbury Archaeological Trust, 2004, 7pp, figs, refs

Work undertaken by: Canterbury Archaeological Trust

The watching brief was carried out during groundworks for construction of three new terraced houses with garages and parking at the rear. Although situated in a prime position on the south side of The Street, in the historic core of Sissinghurst village, literally a few miles away from the known route of the Roman road from Rochester to Hastings, nothing of archaeological importance or interest was revealed on any part of the site. The site had clearly been disturbed by the construction of the previous Russell's Garage which involved deeply placed fuel tanks which could have removed any archaeological remains. [Au(adp)]

THE FORMER CASCADE MOTORS SITE, WATLING STREET, DARTFORD

An Archaeological Watching Brief at the Former Cascade Motors Site, Watling Street, Dartford

Willson, J Canterbury : Canterbury Archaeological Trust, 2004, 4pp, figs

Work undertaken by: Canterbury Archaeological Trust

The watching brief observed the machine cutting of service and foundation trenches over the whole of the site and a deep service trench across the line of Watling Street. The deep service trench across Watling Street produced no evidence of a Roman road surface. No archaeological remains were observed across the site. The lack of remains indicated that the modern tarmac road construction truncated earlier deposits before the deposition of modern rubble and gravel to form the base of the road. However, it was possible that other areas in the vicinity which may not have been subject to considerable disturbance could contain archaeological evidence of earlier occupation and use. [Au(adp)]

Hart, J & Coleman, L Cirencester : Cotswold Archaeology, 2004, 13pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeology

There were no definable concentrations of artefacts predating the post-medieval period. Prehistoric activity was reflected by the recovery of three worked flint artefacts of probable earlier Prehistoric date, and three pieces of burnt flint. A single sherd of medieval pottery was recovered, as well as fragments of burnt clay and slag of unknown date. A general spread of artefactual material dating to the post-medieval and modern periods was found across most of the fields subject to fieldwalking. The distribution of this material probably results from agricultural processes such as manuring. [Au(adp)]

An Archaeological Watching Brief Diamond Building Project, Rutherford Appleton Laboratory, Chilton, Oxfordshire

Moore, J & Parsons, G Holton : John Moore Heritage Services, 2004, 25pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

From the results of the watching brief it was apparent that an early/middle Iron Age settlement was within the site area. The settlement was enclosed and although no buildings were discovered the remains probably represents a farmstead based on agriculture rather than livestock. Several grain storage pits were located. The amount of residual Mesolithic and Neolithic/Early Bronze Age flint may

represent the close proximity of earlier settlements or were just a reflection of the landscape being exploited in these periods. [Au(abr)]

BRIZE'S LODGE, LEAFIELD

An Archaeological Investigation at Brize's Lodge, Leafield, Oxfordshire

Moore, J & Hart, D Holton : John Moore Heritage Services, 2005, 31pp, figs, tabs, refs
Work undertaken by: John Moore Heritage Services

The excavation of Area C uncovered remains of Iron Age, Roman and post-medieval date. Iron Age activity was restricted to a substantial ditch and Roman activity seems very much a continuation of this, albeit related to the newly founded building to the west, comprising ditches, pits and plough furrows or planting trenches. A possible clay chest may have alluded to a potential pottery in the vicinity, though no other evidence for production was found. Post-medieval remains on the site were dominated by those of a large rectangular building, cut into the subsoil of the site and initially constructed of timber but later replaced with masonry. A handful of post holes attested to the presence of timber structures on the site, though little sense could be made of these features and were likely to represent structures extending beyond the limits of excavation. The building had been demolished and heavily robbed by the mid-18th century and was subsequently sealed by the topsoil of the site. The watching brief mainly identified areas where occupation was absent. [Au(abr)]

Moore, J Holton : John Moore Heritage Services, 2004, 9pp, figs, tabs, refs

Work undertaken by: John Moore Heritage Services

A watching brief was conducted during the excavation of foundation and drainage trenches for the conversion of a barn to a single dwelling. At least one pit found was presumed to be associated with the

Anglo-Saxon occupation known in the immediate area. The medieval ploughsoil was dated to before the 13th century suggesting that this site was in agricultural use up to some time in the later 12th century and then was developed into burgage plots with settlement adjacent to the High Street. A ditch cutting the ploughsoil was considered to be a burgage plot boundary. Further pits may date to the 15th century and clay-lined pits indicated a specialist use. [Au(abr)]

BLACKFRIARS DISTILLERY, SOUTHSIDE STREET

Blackfriars Distillery, Southside Street, Plymouth. Archaeological Watching Brief. April-June 2004

Heaton, M Durham : ASI Heritage Consultants , 2004, 11pp, colour pls, figs, refs

Work undertaken by: Archaeological Site Investigations

Additional details of the building were revealed, including relic door and window frames and fragments of architectural detailing re-sued as rubble. Whilst the report concluded that the small amount of new data revealed cannot support detailed chronological analysis, detail G1/1- a relic door from at the rear of the rectory building - was tentatively interpreted, with qualifications, as a former gable entrance that possibly marked the position of an earlier waterfront gable of that building. ROWE STREET

Archaeological Recording at Rowe Street Plymouth, Devon

Best, J Exeter : Exeter Archeology
 , 2004, 7pp, figs, refs
Work undertaken by: Exeter Archaeology

The size of the geotechnical pits was limited by the fact that the car park was still in use. This has meant that it has not been possible during this phase of the works to determine whether Plymouth (Drake's) Leat survives within the site. The eastern channel that crosses the site, as shown on the Tithe Map and the early OS map, probably lies just outside the area occupied by the car park and within the area landscaped for the construction of Drake's Circus. As such, this stretch of leat will probably have been destroyed by post-war landscaping. However, the leat may survive in the vicinity of the mill buildings on the southern edge of the site. The position of the western stretch of leat within the site was unknown and was not shown on any cartographic representations of the site. Additional archaeological excavations or observation of the groundworks for the construction of foundation would be required to resolve the question of whether the leat survives within the site. SOUTHSEA CASTLE BANDSTAND, PORTSMOUTH

Summary Report on an Archaeological Watching Brief at Southsea Castle Bandstand, Portsmouth

Wheeler, P Southampton : Southern Archaeological Services Ltd., 2004, 13pp, colour pls, figs, tabs, refs

Work undertaken by: Southern Archaeological Services Ltd.

A series of watching briefs were carried out on phased groundworks associated with the installation of underground cabling and pop-up power supply points at Southsea Castle Bandstand, Portsmouth. The site lay within reclaimed land, modern made ground was found above natural flint gravels which were occasionally overlain by a heavy natural clay. No features or finds were observed or recovered pre-dating the modern period, and the embankment that surrounded the bandstand was found to contain concrete blocks. [Au(adp)]

149 KINGSTON ROAD, KINGSTON, PORTSMOUTH

An Archaeological Watching Brief at 149 Kingston Road, Kingston, Portsmouth, Hants

CKC Archaeology Fair Oak : CKC Archaeology, 2004, 12pp, figs, refs

Work undertaken by: CKC Archaeology

The watching brief was carried out during the construction of a three-storey building containing 13 flats. The site lay close to the known medieval settlement of Kingston. There was no evidence for medieval or early post-medieval development on the site. A late chalk surface could have represented a yard associated with Swann Farm, a historic farmstead, and was late post-medieval in date due to the brick fragments located underneath the surface. On the south of the site was a brick house with more extensive cellaring than that found on the site of terraced housing erected c. AD 1900 on the Kingston Road frontage. [Au(adp)]

27 LONDON ROAD, PORTSMOUTH

An Archaeological Watching Brief on Land Behind 27 London Road, North End, Portsmouth, Hants.

CKC Archaeology Fair Oak : CKC Archaeology, 2004, 9pp, figs, refs

Work undertaken by: CKC Archaeology

The watching brief was carried out in advance of a proposed two-storey building containing four flats. The method of making the foundations by piling, restricted the archaeological observations that could be made on the site. Very little human artefacts were seen, a few rare post-medieval pottery sherds were observed. One borehole near the east of the site had a feature indicative of a post-medieval pit. Other than this, there appeared to be little evidence of any activity on the site. The development site had been part of a garden for a property on London Road when first shown in 1838. There was no clear evidence of any subsequent building taking place on site. [Au(adp)]

Garner, M Southampton : Southampton City Council Archaeology Unit, 2004, 9pp, figs, tabs, refs

Work undertaken by: Southampton City Council Archaeology Unit

Groundworks for the construction of a block of four flats were observed. Trenches exposed natural deposits, deposits of uncertain date containing charcoal and shell, and modern contexts including a building and associated cellar. Buried soil with small quantities of cultural material probably had formed the ground surface before the area was developed. Medieval Fratton was not identified at but much of the site had been disturbed by modern building work. [Au(adp)]

OLD STUDENT UNION SITE, RAVELIN PARK, MUSEUM ROAD, PORTSMOUTH***An Archaeological Watching Brief at the Old Student Union Site, Ravelin Park, Museum Road, Portsmouth, Hants***

CKC Archaeology Fair Oak : CKC Archaeology, 2004, 15pp, figs, refs

Work undertaken by: CKC Archaeology

Observations made during drainage works showed that the fortifications of old Portsmouth lay under this area. On the west side of the car park two sections of massive stone walls over 2m and 2.8m wide were located. These were thought to be part of the forward facing wall of the Town Bastion (east side). It was noted in both cases that the back of the wall (west side) still retained its facing blocks, but the

east sides facing on to the conjectured moat had been destroyed, with some rubble being spread from the face of the wall. A further series of five walls were found in Trench Five on the east side of the site, ditch like cuts were also observed. [Au(adp)]

Report on an Archaeological Watching Brief at the Manor House, 140 Copnor Road, Portsmouth

West Sussex Archaeology Petersfield : West Sussex Archaeology, 2004, 9pp, figs, refs

Work undertaken by: West Sussex Archaeology

A watching brief was carried out in advance of the demolition of existing premises and the erection of four houses and six flats. The results showed that the northern part of the study area lay over the remains of medieval open strip fields, enclosed in the first half of the 17th century. Subsequently, the area remained agricultural in use until the construction of a new building in the second half of the 19th century. An east-west ditch most likely represented an associated boundary marker. [Au(adp)]

SLOUGH SEWAGE TREATMENT WORKS

Report on an Archaeological Watching Brief at the Slough Sewage Treatment Works, Berkshire

Berkshire Archaeological Services Aldermaston : Berkshire Archaeological Services, 2004, 5pp, figs, refs

Work undertaken by: Berkshire Archaeological Services

Previous evaluation work in the vicinity of the site had produced evidence for early Mesolithic to early Bronze Age activity in the form of pits containing worked and burnt flint. No archaeological evidence was found which would suggest that significant prehistoric activity was present on the site. The few finds comprised a small assemblage of worked and burnt flint from the base of a peat deposits, and two small sherds of post-medieval pottery. The only features were single drainage ditch of probable post-medieval date and a possible palaeochannel. A low embankment on higher ground at the edge of the floodplain was interpreted as a lynchet, probably of medieval or post-medieval date. [Au(abr)]

85-87 HILL LANE, SOUTHAMPTON***85/87 Hill Lane, Southampton. Archaeological Watching Brief Report***

Armour Chelu, R Salisbury : Wessex Archaeology, 2005, 4pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The watching brief was carried out during groundworks for building foundations. Post-medieval deposits were recorded from the ground surface down to a depth of approximately 0.40m, with a layer of gravels below. A number of modern intrusions were identified representing both brick-built cellars and drainage features relating to the recently demolished buildings. No archaeological layers, features or finds were evident within the site. It was likely that any archaeology which may have been present would have been removed by modern construction work. 94 HIGH STREET, SOUTHAMPTON***Report on Two Test Pits at 94 High St., Southampton***

Russell, J Southampton : Southampton City Council Archaeology Unit, 2004, 14pp, colour pls, figs, refs

Work undertaken by: Southampton City Council Archaeology Unit

The vault contained within the site is a Scheduled Ancient Monument (193) and it was damaged by the construction of a fence. Two test pits were excavated to determine the extent of the damage. The two pits revealed that post holes measuring 300mm at the top and tapering inwards as they went down had been cut into the 1960's concrete covering the vault roof of 94 High Street. These contained metal fence posts. It was impossible to excavate these holes to their full depth but they probably reached the vault roof beneath the concrete. Examination of the inside of the vault areas of damage spaced at regular intervals reflecting the positioning of the posts. The concrete cap, therefore, no longer protected the vault roof from the influx of water. [Au(abr)]

THE HERMITAGE, PAINSHILL PARK COBHAM

Reconstruction of the Hermitage at Painshill Park, Cobham, Surrey

Howes, L Swanscombe : Lesley Howes, 2004, 3pp

Work undertaken by: Painshill Landscape Team

Archaeological works were carried out between 1983 and 1986 in order to establish how much of the 18th century Hermitage in Painshill Park still survived. Works to restore the Hermitage were then carried out in 2004, during excavation of foundations concentrated on the mound the remains of two brick features were recovered. It appeared that the earlier excavations had recovered building rubble and truncated remains of timber uprights of the upper part of the building while the rebuilding work of 2004 probably uncovered the main foundations. A polythene membrane was laid between the brick features and the concrete foundations of the new build. [Au(adp)]

Sayer, K London : Pre-Construct Archaeology Ltd., 2004, 37pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

An archaeological watching brief was carried out during geotechnical test pitting ahead of a road scheme. Eighty-nine trial pits were monitored, nine of these revealed possible archaeological features, including pits, postholes and a large ditch. Disturbed river deposits were identified within four trial pits and twelve trial pits produced archaeological finds from the topsoil. The small quantity of dating evidence, generally recovered as residual or unstratified material, included struck flint and burnt flint probably reflecting prehistoric activity and later finds representing the late medieval and post-medieval periods. BOCKETTS FARM

Bocketts Farm Survey

Williams, D Woking : Surrey County Council, 2004, 2pp, pls

Work undertaken by: Farnham and District Searchers, Guildford Discoverers, Northwest Surrey Searchers, U3A, Weald and Downland Searchers, West Kent Metal Detector Club

A metal detector survey was carried out on May 30th-31st 2004 following on from the previous year's survey in fields to the south of the A246 when evidence for mainly late Roman occupation was found. This year's survey took place in the field to the south of the buildings of Roaringhouse Farm. Thirty-eight detectorists from various groups were involved covering 2.6ha. Finds mainly dated to the 18th century and later which related well to the date of the farm buildings. Three objects of earlier periods were recovered: a buckle plate of medieval or Tudor date, a brooch of Hod Hill type dating to the first century AD and more importantly, a bow brooch of the Early Iron Age. This belonged to the Hull and Hawkes Group L, which dates to c.600-450 BC. [Au(abr)]

GADBROOK CHAPEL, GADBROOK ROAD, BETCHWORTH

An Archaeological Excavation at Gadbrook Chapel, Gadbrook Road, Betchworth, Surrey

Sayer, E London : Pre-Construct Archaeology Ltd., 2004, 2pp

Work undertaken by: Pre-Construct Archaeology Ltd.

An excavation was undertaken to clear all of the human burials in the cemetery associated with the Gadbrook Chapel. A total of 36 burials were uncovered, recorded and removed, all dating to the 19th century. Soil conditions meant that bone survival was poor, though by piecing together broken gravestones from around the site, some of the buried individuals could be named. The work was undertaken in conjunction with Bournemouth University and INFORCE (International Forensic Centre of Excellence for the Investigation of Genocide). This was in order to give training to students undertaking forensic archaeology courses. The burials were to be examined and recorded at Bournemouth University before being re-interred. [Au(adp)]

LAND AT CROYDEN LANE, BANSTEAD

Land at Croyden Lane, Banstead, County of Surrey. An Archaeological Excavation Report

Thrall, P London : Museum of London Archaeology Service, 2004, 21pp, figs, refs

Work undertaken by: Museum of London Archaeology Service

A controlled excavation and watching brief were carried out in relation to a site redevelopment. The excavation revealed natural chalk solution features and a single irregular pit. A layer of possible agricultural soil was recorded sealing these features that contained two fragments of struck/worked flint probably dating from the late Neolithic to Bronze Age and pottery sherds dating to the medieval and

post-medieval periods. The highest survival of archaeological deposits occurred at 151.30 OD. No features or artefacts were uncovered in the areas monitored during the watching brief. [Au(adp)]

ROSEHILL ROMAN TILE KILN

Assessment of the Rosehill Roman Tile Kiln and Associated Contexts

Jones, P et al Woking : Surrey County Archaeological Services, 2004, 20pp, colour pls, figs, refs
Work undertaken by: Surrey County Archaeological Unit

An archaeological excavation and assessment was carried out on an area containing a Roman Tile Kiln. Evidence of Roman tile production in the vicinity had long been established but no kiln had been previously archaeologically recorded. Preliminary research indicated that the structure was the sixth largest found in Britain, according to the internal size of its combustion chamber (12.21m squared), although it had the longest fire tunnel so far found (3m) and the most impressive facade of the few (up to seven) that possessed them. Five other kilns in Britain included drains made of imbrices (3), a simple ditch (1) or box flues (two including Potters Bar), but none was of the complexity of the Rosehill example. [Au(adp)]

Archaeological Work in 2004 at Farnham Quarry (Runfold Farm), near Runfold, Surrey

Hayman, G Woking : Surrey County Archaeological Unit, 2004, 8pp, figs, refs
Work undertaken by: Surrey County Archaeological Unit

Archaeological works including excavation and observation were carried out in advance of mineral extraction. The work led to the discovery of various ditches, two or possibly three of which, most probably dated to the Late Iron Age while the remainder were of relatively recent origin, and an amorphous feature which produced a large quantity of humanly struck flint. The excavation was extremely worthwhile in that it enabled a considerable further stretch of a previously known north-south 'Celtic' field boundary to be traced. [Au(adp)]

NEW HOUSE, COMBE

A Rescue Excavation of a Roman Burial at the New House, Combe, West Berkshire

Berkshire Archaeological Services

Aldermaston : Berkshire Archaeological Services

, 2004, 11pp, figs, tabs, refs

Work undertaken by: Berkshire Archaeological Services

Human remains were discovered unexpectedly during the underpinning of the foundations of the New House at Combe. The archaeological recording and excavation of the burial demonstrated that the construction worker' machine-dug trench had cut obliquely through the fill of a grave. This was rectangular in plan and aligned on a north-west to south-east axis. It had been cut from the base of the modern topsoil and mostly lay below the foundations of the New House. The burial proved to be an adult, possibly female, placed on the left side with flexed legs and the head to the north-west. Handmade iron nails were found in two distinct layers, mainly behind the head and feet with a few at the side of the inhumation. A number of these had mineralised wood adhering to the shafts and would have been from a plain, plank-built wooden coffin. A series of iron hobnails and plates or leather clips from the footwear identified the burial as Roman. The evidence does not allow for precise phasing, but the character of the burial suggested that it was most likely to date between the late second and fourth centuries AD. It is probable that the inhumation was accompanied by other burial in a small cemetery. [Au(abr)]

ARUNSIDE INDUSTRIAL ESTATE, FORT ROAD, LITTLEHAMPTON

An Archaeological Excavation. Arunside (Lineside) Industrial Estate, Fort Road, Littlehampton. West Sussex

Adams, S Twickenham: AOC Archaeology Group, 2004, 41pp, figs, tabs, refs
Work undertaken by: AOC Archaeology Group

The excavation involved the monitoring of the machine stripping of the topsoil and subsoil across the site with hand excavation and recording of archaeological features. The earliest phase of activity on the site dated to the Bronze Age with one semi-circular ditch found near the centre of the site. Post holes were found in the termini on either side of an entranceway through this ditch which probably once held posts to mark or form a gateway. The ditch may have acted as an agricultural enclosure or boundary rather than have been related to a settlement as there was no settlement evidence in the vicinity. The evidence did not indicate a specifically ritual use. During the Iron Age the site was developed into a rectilinear field system surviving as parallel, narrow, fairly shallow ditches. These ditches appeared to have been in use during the Early Roman period. However, in the Late Roman period, the general alignment of this system altered slightly aligned from a north-west to south-east and north-east to south-west alignment to a north-northeast to south-south-east alignment with three parallel ditches. The most easterly of the Roman ditches was particularly substantial in comparison to the other features and may have formed a boundary between the arable land to the west and the settlement at Wickbourne Estate to the east. No signs of Iron Age or Roman domestic activity were found on the site. A line of four post holes parallel to one of the Iron Age ditches may have supported a fence line rather than any kind of dwelling structure. Finds were few across the site but small fragments of dateable pottery were found in many of the ditches along with several flint flakes, a few flint cores and a flint scraper. [Au(abr)]

CLARE HOUSE, THE STREET, PATCHING

An Archaeological Watching Brief at Clare House, the Street, Patching, West Sussex

Butler, C Ditchling: Archaeology South-East, 2004, 10pp, figs, tabs
Work undertaken by: Archaeology South-East

The watching brief was carried out during the construction of a detached house. Two 19th-20th century features were identified filled with flints and ceramic building material. No earlier archaeological features were located. A single sherd of later medieval pottery and pieces of worked flint and fire-fractured flint were found in the topsoil. [Au(adp)]

NEW SECTION OF DRIVEWAY, ARUNDEL CASTLE

New Section of Driveway, Arundel Castle, Arundel, West Sussex. Archaeological Watching Brief Within Scheduled Monument (SM12888)

Wessex Archaeology Salisbury : Wessex Archaeology, 2004, 7pp, figs, tabs, refs

Work undertaken by: Wessex Archaeology

The watching brief revealed that topsoil overlay chalk on the east side of the excavation area and two deposits interpreted as re-deposited natural geological deposits on the western side. These chalky clay deposits contained ceramic building material and may have been connected with the construction of the driveway to the east. This driveway appears to have cut through earthworks, aligned south-west to north-east, connected with the 17th century bailey, a large defended outer bailey added to the existing medieval north-west bailey in 1643, during the civil war. Riccoboni, P Ditchling : Archaeology South-East, 2004, 32pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

The remains of a once substantial wall were recorded underneath the milking parlour floor, which may have formed a peripheral building of the known medieval hospital. The dating evidence retrieved from this wall suggests a 13th-14th century origin. A previously unknown buttress was also discovered on the north east corner of the existing house (Priory Farm), which has a minimum of seven courses surviving beneath ground level. A service trench to the front of the house revealed three surviving wall footings of between 1.0-1.2 metres width, which appeared to extend at right angles from the front of the house. Other service trenches near the centre of the complex revealed a range of walls in vary states of preservation. The service trenches and sump to the west of the milking parlour revealed no archaeology, indicating that this area of the site was outside of the monastic complex. [Au(abr)]

Worral, S & Griffin, N Ditchling : Archaeology South-East, 2004, 6pp, figs, tabs, refs

Work undertaken by: Archaeology South-East

No archaeological features were observed in the initial topsoil strip. The second strip revealed an undated east-west ditch. This work did produce a small assemblage of worked and fire-cracked flint that may hint at possible Late Bronze Age activity in the area, and a quantity of post-medieval pottery likely to be associated with several late 18th century cottages that formerly occupied an adjacent field. Work undertaken by: AOC Archaeology Group

The watching brief involved the monitoring of the machine stripping of the topsoil and subsoil across the site with hand excavation and recording of archaeological features. Much of the site was heavily truncated by underground tanks and other buildings associated with the gasworks. The earliest phase of activity on the site dated to the post-medieval period. This was most densely represented in the northern corner of the site (approximately 200m to the west of St. Margaret's church) where a scatter of largely sub-circular, shallow pits was found. Work undertaken by: Chris Butler Archaeological Services

An archaeological watching brief was undertaken during the excavation of trenches for the burying of overhead electricity cables. The machine cut trench was unfortunately backfilled before a full survey of the trench sides could be made. However, part of it's length was observed and the redeposited spoil was inspected for archaeological artefacts. A small collection of artefacts, including prehistoric flintwork together with post-medieval pottery and glass, was recovered from the spoil and ground surface. [Au(adp)]

Work undertaken by: C.G. Archaeology

The watching brief was maintained during groundworks associated with the construction of a new toilet block. The study area had been disturbed, however 11 poorly preserved skeletons were recorded at the base of the monitored extension footings. Each of the presumably post-medieval skeletons were placed upon the solid uppermost surface of the Tunbridge Wells Sand. No discernable grave cuts or grave markers were identified, however, evidence for timber coffins was recorded in the form of wood stains and iron nails/fixings. A number of disarticulated fragmentary bones were recovered from the subsoil. A King George III 1806AD copper alloy halfpenny was found in the excavated topsoil. [Au(adp)]

Work undertaken by: Cotswold Archaeology

The watching brief was undertaken during groundworks associated with the extension of a clay quarry. An undated tree-throw pit containing a layer of charcoal and ash, presumed to have been from stump-burning was recorded. Earthwork features associated with post-medieval marl extraction including a quarry pit, two drainage channels and two depressions which may have represented the locations of infilled mine pits beneath. Finds included post-medieval pottery and possible 'tap slag'. [Au(adp)]

West Sussex Archaeology Petersfield : West Sussex Archaeology, 2005, 34pp, colour pls, figs, refs

Work undertaken by: West Sussex Archaeology

An archaeological evaluation was carried out following a previous evaluation (2003). The majority of the excavated area consisted of the backplot of a property, defined by a series of boundary ditches, added to the village in the late medieval period. Earlier boundary ditches indicated that the older parts of the village lay to the immediate north and east of the site. [Au(adp)]

REAR OF HALIFAX BUILDING, 6 MARKET PLACE

Rear of Halifax Building, 6 Market Place, Wokingham, Berkshire: Archaeological Watching Brief

Henderson, M Holton : John Moore Heritage Services, 2004, 9pp, figs, refs

Work undertaken by: John Moore Heritage Services

An archaeological watching brief took place during the excavation of four foundation pits for the construction of a new air conditioning unit and enclosure to the rear of the Halifax Bank building at 6 Market Place, Wokingham. Remains of a brick wall and possible chimneystack base of post-medieval origin were recorded and two sherds of post-medieval pottery were recovered. The structure remains had been demolished and a deposit of made ground added to level the area. No remains of medieval date were observed. [Au]

SMR primary record number: ERM222
