METCHLEY ROMAN FORT*Metchley Roman Forts, Birmingham*

Jones, A Birmingham : Birmingham Archaeology, 2004, 32pp, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

An archaeological excavation was undertaken along and outside the western defences of the fort. The earliest feature identified (phase 1B) was a ditch from the western defences or from the construction camp. A section of phase 1B, consisting of double ditched and turf rampart defences was sampled and a group of contemporary ovens were encountered. Features from the western annex were identified (phase 1C), comprising of a palisade trench and a causeway, which was later re-cut. Palisade trenches (phase 2B) were identified associated with animal pens. The defences were sealed after phase 2B during the first period of abandonment. The Roman Road on the site was reused during the post-medieval period. A concrete foundation associated with Second World War defences was also identified. [Au(abr)]

GREYFRIARS ROAD, COVENTRY

Greyfriars Road, Coventry: An Archaeological Watching Brief 2003-4

Bracken, R Birmingham : Birmingham Archaeology, 2005, 14pp, colour pls, figs, tabs, refs

Work undertaken by: Birmingham Archaeology

Documentary evidence suggested that butchery waste may have been dumped at the site during the late medieval period. The presence of two residual sherds of medieval pottery recovered from the site may, perhaps have suggested that dumping of refuse or manuring took place here in the medieval period. The earliest datable deposit recorded contained 17th and 18th century pottery and animal bone, which was preserved within a slight hollow and could be the remains of a dump of domestic refuse. No substantial pre-19th century features were recorded and the remains of two small structures, one built partly of reused sandstone, may be evidence of small sheds or small agricultural buildings. Traces of a sandstone wall and a 19th century brick culvert were also revealed and appear to coincide with a feature shown on 19th century OS maps, marking the boundary between buildings fronting onto Warwick Row and gardens to the rear. A brick-built concrete-floored cellar, probably the remains of a boiler house, was uncovered. Together with three probable soakaway features this appears to be associated with either a brick-built Scout hut or Sibree Hall. [Au(abr)]

UPPER WELL STREET, COVENTRY***Upper Well Street, Coventry. An Archaeological Excavation, 2004. Post-excavation Assessment and Updated Project Design***

Hancox, E Birmingham : Birmingham Archaeology, 2004, 58pp, colour pls, figs, tabs, refs
Work undertaken by: Birmingham Archaeology

The excavations found that eleventh to fourteenth century deposits did survive, although heavily truncated by later archaeology. The city ditch was located and excavated; it was found to be 4m deep, with earliest deposits being dated to the fifteenth century. Contemporary industrial activity in the form of bone working was also found along the edge of the ditch. Evidence of the seventeenth and eighteenth century buildings visible on the historic maps and mentioned in the documentary sources was uncovered, along with the foundations of a nineteenth century building, thought to be the warping and winding factory known to have been on the site at the time. Castlering Archaeology Pontesbury : Castlering Archaeology, 2004, 22pp, colour pls, figs, tabs, refs

Work undertaken by: Castlering Archaeology

The excavations for the proposed works were monitored in October 2004. traces of fragmented and eroded sandstone together with the lime mortar were located in both areas of excavation. In the trenches excavated for the house extension, the sandstone appeared to be the remains of walls which had enclosed areas with compacted pebbled floors. Fragments of animal bone were compacted into the floor surfaces. In the excavations for the garage, similar walls appeared to have enclosed a cobbled floor. [Au(abr)]

CHURCH OF ST. MARY THE VIRGIN, BROMFIELD*The Church of St. Mary the Virgin, Bromfield, Shropshire. A Report on an Archaeological Watching Brief*

Wainwright, J Clun : Marches Archaeology, 2004, 10pp, colour pls, figs, tabs, refs

Work undertaken by: Marches Archaeology

The foundations of a buttress was encountered as were two brick lined burial vaults. Fragments of an undated pewter chalice were recovered from the general burial soil. It was quite unusual for priests to be buried with a chalice and paten but is was usual for them to be buried on the south side of the church and not the north side. However, it was interesting to note that at Bromfield a priest must have been buried on the north side of the church. [Au(abr)]

An Interim Statement of Results of Excavations at Bermuda Park, Nuneaton, County Warwickshire

Stephenson, A Twickenham : AOC Archaeology Group, 2005, 29pp, colour pls, figs, tabs, refs

Work undertaken by: AOC Archaeology Group

Large quantities of medieval pottery were recovered from the site. The main building complex of the medieval manor was identified in the previous excavations. This would have been a timber framed building or series of interconnected buildings forming a cohesive whole on a foundation platform. The floor plan of the buildings was reconstructed from the linear arrangements of flat-surfaced stones, which would have been the load-bearing elements of the walls and were built up to a required level. Further medieval pits were found. Medieval cobbling sealed a series of post holes and beam slots for timbers. [Au(adp)]

LAND NORTH OF GABLE END, GREEN LANE, WIBTOFT*Archaeological Observation on Land North of Gable End, Green Lane, Wibtoft, Warwickshire*

Warwickshire Museum Field Services Warwick : Warwickshire Museum Field Services, 2004,
6pp, pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

Archaeological observation during the construction of a new dwelling within the medieval settlement of Wibtoft recorded a number of medieval features. Two small sections of probable wall foundation and several pits or gullies containing medieval pottery were recorded during the excavation of foundation trenches. Pottery dating from 12-14th centuries was also found in the footprint of the proposed house. The evidence suggests that the land on which the site is located was occupied by one or more buildings during the medieval period and that the shape of the plot may reflect an original medieval property. DORSET HOUSE, CHURCH STREET, ALCESTER*Archaeological Observation at Dorset House, Church Street, Alcester, Warwickshire*

Warwickshire Museum Field Services Warwick : Warwickshire Museum Field Services, 2005,
13pp, pls, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

Archaeological observation was carried out during the excavation of trenches for a new property to the rear of Dorset House, Church Street, Alcester. This area lies within both the defended area of Roman Alcester and the medieval town but no trace of Roman or medieval occupation was recorded. The proposal area had previously been part of the Alcester Brewery and remains of a greenhouse and a cart shed/stable building belonging to the brewery were revealed along with a considerable build-up of late 19th and 20th century material. ROSE COTTAGE, MILL LANE, KINETON*Excavations at Rose Cottage, Mill Lane, Kineton, Warwickshire*

110 Archaeology Gloucester : 110 Archaeology, 2005, 25pp, pls, colour pls, figs tabs, refs

Work undertaken by: 110 Archaeology

The evaluation revealed a continuation of archaeological deposits dating from the late Saxon through to the early post-medieval period. The earliest feature was a possible linear ditch at the front of the site orientated east-west and producing probable 11th century pottery, while two further 11th or 12th century linear ditch features similarly orientated and parallel to one another, were observed to the rear or west of the site. The walled remains of a probable 12/13th century stone building and possible boundary wall were recorded in plan a few metres north of the 9th century ditch. Although this building and wall were only partially uncovered, residual finds within the associated thick demolition layer suggests construction and occupation of the building from the 12/13th century with abandonment appearing to have occurred during the early post-medieval period. In addition to these features, two former roads, consisting of angular fragments of limestone in a roughly constructed cobbled surface, were also exposed. Stone surfaces were revealed in three areas. The extent and general alignment of two of these exposed surfaces points to a single road across the centre of the site, generally orientated east to west and approximately 6/8m wide. The north edge of a second slightly truncated stone road was partially exposed on the extreme south side of the site, extending south for a distance of 6m/ Although the construction of these roads remains undated finds recovered from material overlying their surfaces and therefore associated with their use suggests usage from 12/13th continuing up until the early post-medieval period. ST. PETER'S CHURCH***Archaeological Observations at St. Peter's Church, Whatcote, Warwickshire***

Warwickshire Museum Field Services Warwick : Warwickshire Museum Field Services, 2004, 7pp, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

Archaeological observation at St. Peter's Church, Whatcote, during the excavation of a new service trench, revealed two stone foundations located close to the porch, on the south side of the church. One may have been associated with the foundations of the existing 15th century porch or with an earlier porch. The other less solid foundation, may have been a tomb base. The trench cut through numerous graves, probably mostly post-medieval in date. Three sherds of 12th to 13 century pottery were recovered from the spoil heaps along with five sherds dating from 18th to 19th centuries. Several small fragments of ceramic roof tile and a few larger pieces of stone roof tile were also found on the spoil heaps. These were probably from earlier parts of the church roof and both types could be medieval in origin. [Au]

36 CHAPEL STREET, WARWICK

36 Chapel Street, Warwick

Coutts, C Warwick : Warwickshire Museum Field Services, 2004, 3pp

Work undertaken by: Warwickshire Museum Field Services

The museum was called out after trenches had been deepened and the remains of a sandstone wall, bonded by lime mortar, were found in the corner of the trench. The wall was just off of the line of the overlying sandstone foundation for the early 19th century boundary wall but lay some 0.80m below the present ground surface. The wall had been covered by redeposited natural olive sand. The wall did not appear to correspond to a boundary indicated on one of the historic maps of Warwick suggesting it might be of an earlier date. However, there was no dating evidence associated with the wall. Two sherds of pottery only were recovered by the contractors. One of these was a fragment of factory made slipware and the other was a green-glazed fragment of late medieval pottery. [Au(abr)]

OUTER COURT OF KENILWORTH CASTLE

Archaeological Recording of a New Fence in the Outer Court of Kenilworth Castle, Warwickshire

Warwickshire Museum Field Services Warwick : Warwickshire Museum Field Services, 2004, 10pp, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

Archaeological excavation of a number of new post pits in the outer court of Kenilworth Castle, north of Mortimer's Tower, revealed the probable core of a wall, most likely part of the foundations of the tower. A layer of rubble in an adjacent pit probably represents demolition. Most of the pits appear to lie

across a former post-civil war trackway that passed through a breach in the wall at this point. As such many of the layers revealed were probably associated with the back-filling of this trackway. A single sherd of 14th/15th century pottery, and several fragments dating from the 16th to 18th centuries were recovered from the post-pits along with a single prehistoric flint tool. [Au(abr)]

POTTERTON WORKS, WARWICK

Land at Former Potterton Works, Warwick

Foundations Archaeology Swindon : Foundations Archaeology, 2004, 34pp, figs, tabs, refs

Work undertaken by: Foundations Archaeology

The excavation was undertaken to attempt to locate the footings for the medieval bridge over the River Avon, which was demolished in the nineteenth century; a new bridge was built in 1831. The excavation revealed a series of alluvial layers, a probable palaeochannel, a stone-lined drain possibly with an associated sump, three negative features and a stone wall base. All of the features appeared to be of post-medieval date. No evidence was recovered for the footings to the medieval bridge, although a number of substantial rubble spreads were likely to have resulted from its demolition. [Au(abr)]

ST. MARY'S CHURCH, STONELEIGH

Archaeological Recording at St. Mary's Church, Stoneleigh, Warwickshire

Warwickshire Museum Field Services Warwick : Warwickshire Museum Field Services, 2004, 14pp, colour pls, figs, refs

Work undertaken by: Warwickshire Museum Field Services

Archaeological recording of the interior of the north wall of the chancel of Stoneleigh church was undertaken during the conservation of a large 17th century monument. A blocked 12th century window was revealed along with an adjacent area of walling with a pattern of joints painted on to it. Several

elements of in situ 12th century blind arcading were also discovered. A medieval effigy and tomb recess were revealed. A number of reused medieval floor tiles, including a single patterned example, were found within the base of the 17th century monument. The removal of this monument also exposed an area of wall painting, probably 16th century in date. A small area of earlier, probably medieval, wall painting was visible under the 16th century scheme.
