An Archaeological Watching Brief at 30 Highgate, Beverley

Rawson, D & Jobling, D Kingston-upon-Hull : Humber Field Archaeology, 2004, 31pp, colour pls, figs, tabs, refs

Work undertaken by: Humber Field Archaeology

No features of archaeological interest were found during the re-facing of the rear wall and the demolition of late 19th or early 20th century outbuildings. However, the excavation of the foundation trench for the extension revealed at its base a brick wall of early post-medieval date, aligned east-west. A single piece of moulded masonry was recovered from the trench dated to the late 13th or early 14th century. [Au(abr)]

An Archaeological Watching Brief at Souttergate, Hedon

Jobling, D Hull : Humber Field Archaeology, 2004, 11pp, colour pls, figs, refs

Work undertaken by: Humber Field Archaeology

An archaeological watching brief was undertaken during groundworks associated with the erection of a single storey workshop. Monitoring of the backfilled foundation trenches revealed deposits relating to the use of the area as a stonemasons workshop yard during the 19th century. Potential archaeological deposits lay below the level of the backfilled trenches. Pottery artefacts dating to the 19th century were noted in the trenches, however, none of these were retained. An Archaeological Watching Brief at 7, 9, 11 Walkergate, Beverley

Rawson, D Kingston-upon-Hull : Humber Field Archaeology, 2004, 23pp, colour pls, figs, refs

Work undertaken by: Humber Field Archaeology

Monitoring of the excavation of the foundation trenches revealed evidence for previous structures on the site, 18th century brickwork having been laid, in at least one instance, upon rubble stone walling that followed a different alignment. This rubble stone in its turn had been laid on at least one course of dressed stone probably dating from the late medieval period. Finds recovered from the site dated from the medieval period through to the 18th century. Most intriguing of these was 13/14th century jug that had been broken and reused as a paint pot. [Au(abr)]

A614 WELHAM BRIDGE

A614 Welham Bridge to Spaldington, East Riding of Yorkshire. Post Excavation Interim Report

Dean, G York : York Archaeological Trust, 2005, 11pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

The watching brief exposed one linear feature that may form part of an Iron Age and Romano-British landscape. Well-preserved wooden fragments were exposed that formed part of a log boat and a trackway of 6th or 7th century date and also found was a series of driven timbers of 13th century date. Three sides of a previously unrecorded moated site were exposed. Within the area defined by the moat there was evidence for structures and later alterations to the site. Pottery recovered from the site suggests that the moated site was in occupation from the 12th-16th centuries. Within this area there was evidence for the 17th-20th century development and alteration of the landscape. The boat and trackway site could be considered of national and perhaps international significance. [Au(abr)]

BEVERLEY MINSTER

Beverley Minster. Report on an Archaeological Investigation

Johnson, M York : York Archaeological Trust, 2004, 109pp, colour pls, figs, tabs, refs
Work undertaken by: York Archaeological Trust

The earliest archaeological features were of probable Anglo-Saxon date and appeared to be of a structural nature. A number of Anglo-Saxon burials succeeded these features. One was accompanied by a willow rod and bead, and was covered by a wooden board; the remainder were in wooden coffins and all were preserved by water-logging. The early burials were on a different alignment from those that succeeded them and may have been focused on an early church. Further burials, preceding the earliest stone structural remains, followed those of Anglo-Saxon date and must relate to a church of which no upstanding remains were found. Traces of lime mortar in the earliest contexts of this series suggest the presence of a stone-built structure, or structures, in the vicinity. The earliest stone structural remains were buttresses and parts of nave walling foundation of probable 12th to 13th century date. This building, assuming it was ever completed, was slightly narrower than the existing 14th century nave. Only a handful of burials occurred between the earliest stone structural remains and the 14th century nave and its buttresses. Extensive sequences of burials post-dated the construction of the extant 14th century nave. The latest deposits encountered related principally to scaffolding post holes and modern surfaces. HESSLE HEALTH CENTRE, HULL ROAD, HESSLE

Hessle Health Centre, Hull Road, Hessle. Report on an Archaeological Excavation

Bruce, G York : On-Site Archaeology Ltd., 2004, 50pp, colour pls, figs, refs

Work undertaken by: On-Site Archaeology Ltd

An archaeological excavation was undertaken following a previous evaluation. A single area of the site within the car park was opened and the excavation encountered evidence for prehistoric and Anglo-Scandinavian activity. This was in the form of occasional worked flint or pottery, although no features of these early dates were excavated. A 12th century boundary ditch which was replaced slightly to the south in the mid to late 14th century was also recorded. The second ditch contained domestic material in the form of pottery and animal bone, the upper fills also contained evidence to indicate that these craft activities had been taking place within the confines of the trench they were likely to have been carried out in the vicinity. Several pits of late medieval date containing domestic refuse, were excavated within the trench. The boundary ditches were still present in the post-medieval period with a slightly different alignment, the area appeared to have been occupied by open agricultural or horticultural land then after. An Archaeological Watching Brief at Plot 2. Land East of Rose Cottage, Grange Road, Adlingfleet

Jobling, D J Kingston-upon-Hull : Humber Field Archaeology, 2004, 12pp, colour pls, figs, refs

Work undertaken by: Humber Field Archaeology

Monitoring of the excavation of the foundation trenches for the new development revealed a north to south aligned plot/field boundary ditch containing fragments of animal bone and burnt stone. This ditch cut into and was sealed by several layers of silt, formed possibly by deliberate inducement. [Au(abr)]

Jobling, D Hull : Humber Field Archaeology, 2004, 53pp, colour pls, figs, tabs, refs
Work undertaken by: Humber Field Archaeology

An archaeological watching brief was undertaken during groundworks for the construction of garages. Monitoring of the groundworks revealed archaeological deposits relating to the medieval period, the majority being 12th to 13th century in date. A sequence of pits, ditches, postholes, occupation layers and dumping deposits and a cobbled hard standing, all of medieval date, were noted as underlying the reduced ground level. Two later, post-medieval ditches were also recorded. Artefacts recovered throughout the duration of the watching brief included pottery fragments dating between the 12th and 19th centuries, ceramic building material, a clay tobacco stem, animal bone, oyster shell, burnt stone and daub. STAMFORD BRIDGE

Flood Alleviation Scheme, Stamford Bridge, North Yorkshire. A Report on an Archaeological Watching Brief

Dean, G York : York Archaeological Trust, 2004, 20pp, figs, tabs, refs
Work undertaken by: York Archaeological Trust

Remains observed during the construction of the flood defences consisted predominantly of alluvial silt deposits and natural clay beneath the modern topsoil. In one area to the west of the Buttercrambe Road, medieval pottery was found in association with a concentration of stones that may be the remains of stone banks. The function of this area was uncertain but it was probably the result of medieval ploughing, with pottery associated with field clearance. Close to the 18th and 19th century mill on the eastern side of the village, the construction of the flood defence wall exposed deposits associated with the infilling of the mill pond. A chamber excavated on the Buttercrambe Road exposed a layer of rough cobbles that was probably a Roman road surface. [Au(abr)]

Work undertaken by: Archaeological Services WYAS

An archaeological strip and record exercise to the south and west of a protected zone containing a Late Iron Age/Romano-British enclosure complex located little evidence of these features. One possible ditch was noted in the southern site baulk that may represent a continuation of a boundary ditch to the south of the enclosures, but this was not evident in plan due to disturbance caused by bulldozers on the stripping of the site. The site also appeared to have suffered plough truncation over the majority of the area monitored. [Au]

WELLGATE, CONISBOROUGH, DONCASTER

Archaeological Investigations at Wellgate (Areas A, B, and C), Conisbrough, Doncaster, South Yorkshire

O'Neill, R Sheffield : ARCUS
, 2004, 127pp, colour pls, figs, tabs, refs
Work undertaken by: ARCUS

The investigations revealed significant archaeological remains, dating from the Roman period onwards. The earliest activity on the site comprised a substantial cut feature into which appeared to be a set number of wooden structures, including a fence, stake alignments and a track. The exact function of the complex, probably a pond or channel, remained unclear. Pottery recovered from the complex comprised a few sherds of Roman second to fourth century AD date. However, radiocarbon and dendrochronological dating of the wood structures suggests a late sixth to early seventh century date for the complex. It seems likely therefore that there was some continuity of activity in the area from the Late Roman into the post-Roman period. Within the areas defined by the ditches were a number of discrete pits. The features may have been contemporary with a major rebuilding of St. Peter's Church and the construction of Conisbrough Castle in the 12th century. [Au(abr)]

37-59 WEST BAR, SHEFFIELD

An Archaeological Watching Brief on Geotechnical Ground Investigations, 37-59 West Bar, Sheffield, South Yorkshire

Raybould, O Sheffield : ARCUS
, 2004, 27pp, pls, figs, refs
Work undertaken by: ARCUS

Five observation pits were opened around the perimeter of the site in order to investigate the stability of the surrounding buildings. The first of these revealed a cobbled surface, possibly an original driveway. The remainder opened directly onto in-filled cellars. Some of these cellars were tiled, and the cultural material within the infill pointed to a site used for both domestic and industrial activities. [Au(abr)]

LEADMILL, SHOREHAM STREET, SHEFFIELD

Report on Archaeological Excavations at the Leadmill, Shoreham Street, Sheffield

Lines, A Sheffield : ARCUS

, 2004, 65pp, colour pls, figs, tabs, refs

Work undertaken by: ARCUS

The archaeological work recorded evidence of the millpond wall and wheelpit base. This area was later adapted for use as the red lead house as the lead works expanded into the area previously containing Marriot Wheel, London. Meandering flues leading to the chimney base were recorded from the final period of occupation, the late nineteenth/ early twentieth century, of the lead works. Production debris from the site was analysed and found to conform with descriptions of the manufacture of red lead contained in nineteenth century metallurgical texts. [Au(abr)]

LONGLEY PARK, SHEFFIELD

Longley Park, Sheffield, South Yorkshire. Archaeological Excavation and Watching Brief

Archaeological Services WYAS Morley : Archaeological Services WYAS, 2004, 33pp, colour pls, figs, refs

Work undertaken by: Archaeological Services WYAS

An archaeological excavation and watching brief at Longley Park Sheffield, was undertaken prior to and during the construction of the new sixth form college. The work identified the remains of an 18th-century ancillary building, part of the 'Brushhouse' complex. Also identified was a structural element of unknown date, pre-dating the ancillary building. A watching brief on 22 foundation trenches, carried out during construction work, was unable to contribute to an understanding of the history and lay-out of the 'Brushhouse' complex. [Au]

LAND TO THE SOUTH OF AUSTTHORPE HALL

Austhorpe Archaeological Heritage Project. Report on Excavation on Land to the South of Austhorpe Hall

Allday, K Leeds : East Leeds History and Archaeology Society, 2004, 44pp, pls, figs, refs

Work undertaken by: East Leeds History and Archaeology Society

Four trenches were excavated but only three yielded any archaeological deposits. Trench one revealed a field boundary ditch believed to be of Iron Age/Roman date. Within trench two, the profiles of three linear ditches of a triple ditch enclosure and their relationship with a ringed ditch enclosure were established and evidence of possible post holes and a burnt post in situ were found. Trench three failed to establish the foundations of a possible building platform. Trench four revealed a stone covered bank which appeared to be part of a Bronze Age round barrow which was overlain by a clay floor which sealed 19th century archaeology and may have been part of a clay floored building. Numerous finds from Trenches two and three suggested Roman and prehistoric occupation of the site. [Au(abr)]

Report on an Archaeological Watching Brief

Antoni, B & Briden, C York : York Archaeological Trust, 2004, 18pp, colour pls, figs, refs

Work undertaken by: York Archaeological Trust

A watching brief produced evidence for the original layout of the building when constructed in the 1630s as an open hall between two cross-wings. This hall was interpreted as a space for an exercising horse. A stone-lined and capped culvert of uncertain date (although containing silt and late 19th century material) ran the length of the hall. As part of refurbishment in the late 19th-early 20th century a floor of large stones was set in place prior to the more recent subdivision of the hall. [Au(abr)]

FORMER BUS DEPOT, NORTHGATE, PONTEFRACT

Archaeological Excavation and Watching Brief. Former Bus Depot, Northgate, Pontefract, West Yorkshire

Spall, C York : Field Archaeology Specialists Ltd., 2004, 60pp, colour pls, figs, tabs, refs

Work undertaken by: Field Archaeology Specialists Ltd.

No remains earlier than the mid-17th century were encountered during either the excavation or watching brief, although residual medieval pottery was frequently recovered from later deposits. The earliest feature at the site was a large ditch cut into subsoil orientated approximately north-west/south-east, encountered during both the excavation and watching brief. Where excavated by hand, it proved to be substantial, over 7.0m wide and up to c. 2.5m deep. During excavation, 17th century ceramic and three pieces of lead shot were recovered. It is likely that the ditch represented the remains of the siegework which were excavated around Pontefract Castle during the Civil War. The partially backfilled ditch was later host to a total of three brick clamps. A late 18th century stone built culvert was associated with layers of made ground. The 19th century malting buildings were encountered during watching brief and a possible pit associated with this phase was excavated in Intervention 14. Some 20th century remains associated with the former bus depot were also encountered. [Au(abr)]

EXCAVATION AT THE SITE OF A NEW PRIMARY SCHOOL, OFF HORKSTOW ROAD, SOUTH FERRIBY

Excavation at the Site of a New Primary School, off Horstow Road, South Ferriby, North Lincolnshire

Pre-Construct Archaeology (Lincoln) Lincoln : Pre-Construct Archaeology (Lincoln), 2004, 6pp, figs

Work undertaken by: Pre-Construct Archaeology (Lincoln)

A series of eight crouched inhumations were identified in a dispersed burial area across the central/northern portion of the site. It is possible that these burials are of Iron Age date, and mimic a similar burial practice identified at Barnetby-le-Wold and North Cave, on the north side of the Humber. The site also revealed a number of stone structures, also within the north/central portion of the site. The first of these was an octagonal structure, which appeared to have three phases of development. Further north, three sides of a rectangular stone building was exposed. Much of the south portion of the site was typified by a series of intercutting ditches of Romano-British and medieval date. [Au(adp)]

PLOTS 1-3, MANOR FARM YARD, BARNETBY-LE-WOLD

Plots 1-3, Manor Farm Yard, Barnetby-le-Wold, North Lincolnshire. Archaeological Watching Brief

Brett, A Lincoln : Pre-Construct Archaeology (Lincoln), 2004, 34pp, colour pls, figs, tabs, refs
Work undertaken by: Pre-Construct Archaeology (Lincoln)

The earliest activity recorded was a number of residual Romano-British potsherds, brick fragments and pieces of tile evidencing a well-appointed building in the immediate vicinity. A single dumped deposit of Anglo-Saxon domestic waste was recovered, containing evidence for the pastoral economy of the site, including the working of cow horns. A proposed made ground deposit of late medieval date attested to the development or re-development of the site in this period. [Au(abr)]

ST. ANDREW'S CHURCH, EPWORTH

St. Andrew's Church, Epworth, North Lincolnshire. Archaeological Observation and Recording

Dennison, E Beverley : Ed Dennison Archaeological Services Ltd., 2004, 22pp, colour pls, figs, refs

Work undertaken by: Ed Dennison Archaeological Services Ltd.

The natural bedrock appeared to be c.1m below the existing ground surface on the north side of the church, but to be somewhat higher at the east and west ends; in test pit 3 the chamfered plinth of the tower rested directly on the bedrock. On average, only another one or two courses of masonry were exposed. No definite evidence for any earlier structures was uncovered in any of the test pits, but some information was gathered to reflect the complex structural development of the church. A small number of disarticulated human bones were recovered from test pit 6 at a depth of 0.50m below the existing internal floor surface. [Au(abr)]

189A HIGH STREET, NOTHALLERTON

189a High Street, Northallerton, North Yorkshire. A Report on an Archaeological Watching Brief

Dean, G York : York Archaeological Trust, 2005, 20pp, figs, refs

Work undertaken by: York Archaeological Trust

The reduction of the ground surface exposed a well-preserved cobbled yard that had partially been covered with tarmac, the foundations of the recently demolished buildings and part of the floor plan of another structure that is shown on the 18th century plan and the 1911 Ordnance Survey map. Close to rear of the upstanding section of 189a, below a demolished modern extension, a cellar was exposed lined with salt glazed bricks. Also exposed close to the rear of 189a High Street was a chamber with a brick barrel vault roof that appeared to have been used as a water tank. The dates of the archaeological features at the rear of 189a High Street were uncertain but it seemed likely that they were 18th-20th century. [Au(abr)]

NORTHALLERTON CEMETERY, NORTHALLERTON

Northallerton Cemetery, Northallerton, North Yorkshire. Proposed Extension Watching Brief

MAP Archaeological Consultancy Ltd. Malton : MAP Archaeological Consultancy Ltd., 2004, 23pp, colour pls, figs, refs

Work undertaken by: MAP Archaeological Consultancy Ltd.

An archaeological watching brief was carried out on land to the west of Northallerton cemetery, formerly occupied by allotments, which was to be used as a cemetery extension. The landscaping work involved the stripping of topsoil and the raising of the ground level by up to 1m using imported subsoil. A single archaeological feature was identified, a large linear feature. This feature may have been associated with the 13th century Bishop's Palace and motte and bailey representing a previously unrecorded ditch or moated boundary. Finds of a post-medieval date were recovered from the upper part of the ditch only, so the actual date of the feature was uncertain. [Au(adp)]

Abramson, P Castleton : North East Archaeological Research Ltd., 2005, 13pp, colour pls, figs, refs

Work undertaken by: North East Archaeological Research Ltd.

An archaeological watching brief was undertaken during the excavation of foundations for holiday lodges. A ceramic drainage pipe was located in two trenches towards the west of the site. Some 50m south of these trenches, a robbed-out slot was recorded which most likely represented a continuation of the pipe route. It was possible that the pipeline represented part of an 18th century water supply to Richmond. Alternatively the manufacture characteristics of the bricks were consistent with their use to channel effluent. Analysis of any surface residues and a thin section of the brick fabric were recommended to establish the use and source of origin of the ceramic bricks recovered. [Au(adp)]

MARNE BARRACKS, CATTERICK

Marne Barracks, Catterick, North Yorkshire. Archaeological Excavation: Assessment

Platell, A Durham : University of Durham, Archaeological Services, 2005, 130pp, figs, tabs, refs

Work undertaken by: University of Durham, Archaeological Services

An archaeological excavation was conducted in advance of development at Marne Barracks. A Mesolithic knapping floor was identified containing over 1100 chert flakes, all debitage from tool manufacture. Overlying the knapping floor was a large Neolithic palisaded enclosure. This was only partly exposed with c.40% lying to the south of the excavated area. It consisted of two concentric sub-circular palisades that, based on projections from the exposed structure, would originally have enclosed a total area of c. 2.75ha. A sample from a posthole yielded a date of 2630BC-2470BC (cal.). This enclosure was seen as being of national importance and many respects unique. Two Roman ditches were also recorded containing pottery dated to the 1st or early 2nd century AD. Gullies, possibly part of a Roman field system were recorded as well as post-medieval pits, a road and field boundaries. Remains of a possible modern sentry box were also recorded. [Au(adp)]

COOK'S QUARRY, WEST HESLERTON***Excavations undertaken ahead of aggregates extraction at Cook's Quarry, West Heselton (2001-2004). Interim Report***

The Landscape Research Centre Malton : The Landscape Research Centre, 2004, 11pp, colour pls, figs

Work undertaken by: Landscape Research Centre

A programme of ongoing archaeological excavations carried out ahead of sand extraction had been undertaken from 2001-2004. This interim report summarised the evidence from 2001-2004. The site contained archaeological features and finds ranging in date from the Late Mesolithic to the post-medieval period. Before 2004, features identified included the following: Prehistoric post-pits, some of which were in alignment, a hengiform enclosure with possible associated cremation burials, barrow with further burials accompanied by food vessels and beakers, trackways, field systems and later medieval/post-medieval field boundaries. The 2004 work added to this by identifying a small barrow with an associated burial containing beaker, with evidence for a late individual being inserted into the grave with the previous individuals bones being carefully stacked against the side of the grave. Another associated grave had the original crouches burial removed leaving only the articulated right foot and

had been replaced by a dog burial (undated). Further excavations were planned for 2005-2006 and it was predicted the site would be fully published after the last phase of work in 2006-2007. [AIP]

Briden, C York : Colin Briden, 2004, 11pp, colour pls, figs

Work undertaken by: Colin Briden

An archaeological watching brief was undertaken during conservation works to a church tower. Several phases of building were identified during the work, the tower was a 15th century addition to a much older building. The most ancient part of the church was the 11th century nave on or near the site of an even older, pre-Conquest, church. In common with the rest of the church, the tower had endured massive restoration in the 19th century. The roof had also been replaced. The tower retained a number of early features, in particular a bell-frame probably dated to the 17th century, an associated contemporary bell and an interesting clock-sundial of 1767. [Au(adp)]

Work undertaken by: MAP Archaeological Consultancy Ltd.

An archaeological watching brief was conducted during topsoil stripping operations in advance of an extension to the existing quarry. During a previous watching brief for a previous extension in 2000 a prehistoric henge-form barrow was identified, recorded and excavated. The 2004 watching brief identified three small pits of prehistoric date that may have been associated with the barrow. One of the pits also contained cremated animal bone. A fourth pit of probable medieval date was also revealed. This feature probably represented a saw-pit. [Au(adp)]

Hall, C Scarborough : Scarborough Archaeological and Historical Society, 2004, 4pp, pls, figs, refs

Work undertaken by: Scarborough Archaeological and Historical Society

A watching brief was undertaken during works to demolish an unstable rear wing of a building and rebuild it using the same materials. Although the house itself was built in red brick, the demolition revealed that the lower courses were built in squared, courses of natural stone. In situ archaeologically was not disturbed during the work, the investigation did not reveal any dating evidence to prove that the rear wing pre-dated the main house. However, the work did reveal that the joists to the front floor were constructed of old ship's masts and spars planed to allow floor boards to be fixed to one side. [AIP]

AINSBROOK

The Ainsbrook Site, North Yorkshire. A Report on an Archaeological Investigation

Evans, D York : York Archaeological Trust, 2004, 9pp, colour pls, figs, refs

Work undertaken by: York Archaeological Trust

No evidence for a boat burial was recovered from Trench one. There was no visible sign of a ship shaped depression and no indication of alignments of nails that could have suggested the previous presence of a clinker-built ship. In trench two, there was evidence for a possible timber structure, represented by a feature interpreted as a beam-slot and possibly a post hole feature. The deposits in the

northern part of this trench were not easy to interpret but their thinness and often firmness may indicate that there were occupation deposits. [Au(abr)]

NEW QUAY ROAD, WHITBY

New Quay Road, Whitby, North Yorkshire. A Report on an Archaeological Watching brief and Excavation

Hunter-Mann, K York : York Archaeological Trust, 2004, 50pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

A watching brief and limited excavation at New Quay Road, Whitby, produced well preserved evidence of occupation on the west bank of the River Esk, dating from the 12th century onwards. Successive reclamations extended the occupied land further into the river from the late medieval period onwards. Well-preserved environmental evidence indicated a medieval population with a varied diet. Finds from post-medieval reclamation material points to the presence of a number of crafts, including metal-working, in the vicinity at that time. [Au]

OPERA HOUSE, ST THOMAS STREET, SCARBOROUGH

Opera House, St Thomas Street, Scarborough. A Watching Brief Report

Hall, C Scarborough : Scarborough Archaeological and Historical Society, 2004, 5pp, figs, refs
Work undertaken by: Scarborough Archaeological and Historical Society

A watching brief was undertaken during groundworks associated with redevelopment of the site, formerly a hippodrome, later converted into a theatre. The site contained post-medieval cellars which covered 90% of the site, this would have removed any archaeology in most of the area. Two copper cisterns were recorded with an evidence for an associated pond nearby. These features were interpreted as late 18th/early 19th century industrial features possibly linked with tanning (modern St Thomas Street was known as Tanner Row until the mid 19th century). Post-medieval and modern pottery was also recorded. [AIP]

An Archaeological Watching Brief at Barlby, North Yorkshire. Report of work undertaken by Tees Valley Archaeology

Tees Valley Archaeology Stokesley : Blaise Vyner Consultancy, 2004, 16pp, pls, figs, refs

Work undertaken by: Tees Valley Archaeology

A watching brief was undertaken during groundworks for the River Ouse Mining Subsidence Remediation Works Phase 2B. The initial topsoil removal was monitored as well as test-pit excavation. During the programme of works a linear feature was recorded, the feature alignment was directly towards a pond and interpreted as a modern drain to fill the pond. A few post-medieval field drains were also visible during works. During one site visit, nine fragments of timber were exposed, however there was no signs of human activity such as cut marks and the timber was interpreted as the remains of naturally fallen trees. Work undertaken by: York Archaeological Trust

Evidence was found for a small number of disturbed inhumation burials. These were almost certainly of Roman date and some were seemingly re-interred in a charnel pit. At what date such disturbance took place is uncertain. Three surfaces, probably roadways, were also found. The most extensive of these was likely to form part of a Roman road that had previously been observed in Dalton Terrace and to the South-west of the Mount School. The two smaller surfaces may have functioned as metalled paths or tracks providing access to parts of the Roman cemetery known to occupy parts of the locality. [Au(abr)]

MOUNT SCHOOL, DALTON TERRACE

The Mount School, Dalton Terrace, York. Report on an Archaeological Excavation

Johnson, M York : York Archaeological Trust, 2004, 20pp, colour pls, figs, tabs, refs

Work undertaken by: York Archaeological Trust

Parts of a kettle-hole or large periglacial feature containing quantities of peat and relating to the last glaciation were observed. Archaeological features consisted of a single stake hole, and L-shaped trench that may once have formed part of a garden feature and land drain. Although all top and subsoil had been removed from the site in the later post-medieval period the presence of quantities of Roman pottery and human bone within the L-shaped feature strongly suggested that Roman burials were formerly present at the site. REAR OF 62 GOODRAMGATE/HOLY TRINITY CHURCHYARD

Rear of 62 Goodramgate / Holy Trinity Churchyard

Bruce, G York : On Site Archaeology, 2004, 2pp, figs

Work undertaken by: On Site Archaeology

The new trench followed the line of the existing, broken, drain and only one deposit was observed throughout. This comprised a soft dark grey brown sandy clay, which contained fragments of pottery of medieval to modern date, ceramic building material, human and animal bone. [Au(adp)]

SPECULATION STREET

Speculation Street, York. Report on an Archaeological Excavation

Bruce, G York : On Site Archaeology, 2004, 65pp, colour pls, figs, tabs, refs

Work undertaken by: On Site Archaeology

The excavation found evidence for Roman activity, in the form of levelling layer and possible post built buildings, and Anglo-Scandinavian occupation, represented by a single beam slot. More intensive activity commenced after the Norman Conquest, when the site was used predominantly for the disposal of domestic refuse with numerous pits. A degree of spatial organisation was also evident with ditch boundaries being created. A large number of stake holes were recorded indicating that lightweight structures were erected on the site. During the later medieval period a massive ditch had been dug, approximately perpendicular to the adjacent city walls, which appeared to form a temporary addition to the defences. Throughout the post-medieval period the site reverted to open ground, finally being developed in the 19th century. [Au(abr)]

ST. JOHN'S CHURCH, MICKLEGATE

St. John's Church, Micklegate, York. Report on an Archaeological Investigation

Bruce, G York : On Site Archaeology, 2005, 176pp, colour pls, figs, tabs, refs

Work undertaken by: On Site Archaeology

An archaeological investigation was carried out during the conversion of the church to a food and drink facility. The earliest recorded structures were the standing walls and column bases. Several truncated medieval burials were recorded as much of the interiors of the church had been truncated by the construction of a series of substantial brick walls and foundation pads. Brick burial vaults had been constructed in almost all areas of the church in the 19th century. In addition, the investigations produced several thousand fragments of disarticulated human bone. WATER MAIN REPAIR, WALMGATE BAR

Water Main Repair, Walmgate Bar, York. A Report on an Archaeological Watching Brief

Dean, G York : York Archaeological Trust, 2004, 5pp, figs, refs

Work undertaken by: York Archaeological Trust

An archaeological watching brief was carried out during the excavation of a trench located to repair a water main on the north-west side of the interior of the barbican of Walmgate Bar. The trench exposed a number of modern services and the deposits within the trench were associated with the backfill of these features and reinstatement of the road surface. [Au]

YORK CITY WALLS, CHAINAGE 822-906

York City Walls, Chainage 822-906. Report on an Archaeological Watching Brief

Mason, I York : York Archaeological Trust, 2005, 6pp, figs, refs

Work undertaken by: York Archaeological Trust

An archaeological watching brief was conducted on a c. 85m stretch of the York City walls during the temporary removal of the stone paving slabs, the demolition of the internal brick jack arches and the clearance of rubble from the base of the void between the two walls. This work enabled the insertion of steel bars which tied the curtain wall and the inner wall together. The work was located between the Chainages 822-906. All of the extant fabric of the city walls was found to be 19th century and all deposits observed between the two walls appeared to be modern. [Au(abr)]

YORK DISTRICT HOSPITAL, WIGGINTON ROAD

York District Hospital, Wigginton Road, York. A Report on an Archaeological Watching Brief

Dean, G York : York Archaeological Trust, 2004, 6pp, figs, refs

Work undertaken by: York Archaeological Trust

A watching brief monitored five geological test pits. This identified a dark grey silt below the present car park and overlying the natural that had been truncated by modern services. This may be a pre-modern deposit, but otherwise little of archaeological importance was identified during the works. [Au(abr)]

YORK RACECOURSE, KNAVESMIRE

York Racecourse, Knavesmire, York. Topographic Survey and Watching Brief

Jackson, R York : Field Archaeology Specialists Ltd., 2004, 20pp, figs, tabs, refs

Work undertaken by: Field Archaeology Specialists Ltd.

The topographic survey defined a series of very low level earthwork anomalies, of which the only significant feature was that of a possible north-south aligned ditch. This feature was anticipated but not encountered during the watching brief monitoring. The watching brief phase of this project monitored both the removal of topsoil within the corridor of the race track extension and the excavation of a new drainage system. The earliest archaeological activity encountered at this site was represented by a large spread of 19th century refuse. [Au(abr)]
