NEVILLE HOUSE, PAGE STREET***Neville House, Page Street, London, SW1. City of Westminster. An Archaeological Assessment***

Mackinder, T London : Museum of London Archaeology Service, 2002, 37pp, figs, refs

Work undertaken by: Museum of London Archaeology Service

In the area of the basement it is thought that very little archaeological material will survive, as the basement slab will have cut into the natural deposits. However, in the unbasemented part of the site to the south of the current building, Neville House, there is greater potential for the survival of archaeological deposits. These deposits will relate mainly to post-medieval buildings at the site. There is also potential for deposits relating to prehistoric settlement and activity. Further investigation may be necessary. SAVOY HILL HOUSE & 2 SAVOY PLACE***Savoy Hill House & 2 Savoy Place, London, WC2. City of Westminster. An Archaeological Impact Assessment.***

Howard, C London : Museum of London Archaeology Service, 2002, 47pp, figs, refs

Greater London Region

Work undertaken by: Museum of London Archaeology Service

Probable archaeological deposits and features consist, in summary, of prehistoric alluvial deposits; the Middle Saxon foreshore, waterfront and possible occupation; the medieval Savoy palace, ancillary buildings and waterfront; the Tudor Hospital of St John the Baptist; post-medieval dwellings and converted hospital buildings; Wren's military prison, the Calvinist church; and German Lutheran church and burial ground. Further investigation is necessary to determine the exact nature and depth of such deposits. [Au(abr)] *SMR primary record number:* 33/578

ST JOHN'S CHURCH, HYDE PARK

Archaeological Assessment: St John's Church, Hyde Park, City of Westminster

CPM Cirencester : CPM, 2002, 41pp, pls, figs, refs

Work undertaken by: CPM

The information indicates that, although the the site lies in close proximity to two Roman Roads, it has low archaeological potential for the Roman period. The focus of Saxon settlement was to the north-east of the site around Paddington Green, however, there have been no finds of this date made in the vicinity of the site. It is likely that up until the early to mid 19th century the site was formed by either uncultivated, cultivated or pasture land. [Au(abr)] *SMR primary record number:* 33/558
