COTSWOLD EASTERN SPINE ROAD STAGE 4***Cotswold Eastern Spine Road Stage 4 and Horcott Road.***

Watkins, K Gloucester : Gloucestershire County Council Archaeology Service, 2002, 19pp, pls, figs, tabs, refs

Work undertaken by: Gloucestershire County Council Archaeology Service

An impact assessment was carried out on the proposed road improvement scheme. A possible prehistoric enclosure was noted along the route. Medieval ridge and furrow was identified and a possible medieval drainage ditch. A field system is also present in the area dating to the Iron Age/Romano-British period. Part of a canal would also be impacted, along with an arched aqueduct. [Au(abr)] *SMR primary record number:* 21800

DOWDESWELL COURT, LOWER DOWDESWELL, CHELTENHAM***Dowdeswell Court, Lower Dowdeswell, Cheltenham. Archaeological Desk-Based Assessment***

Stoten, G Cirencester : Cotswold Archaeological Trust, 2002, 30pp, colour pls, pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

There was thought to be evidence for the potential of previously unrecorded medieval or earlier remains in the vicinity. Norman activity has been recorded in the northern area of the site and occupation may have continued up to the construction of the manor house in the 17th century. Earlier occupation was regarded to be focussed away from the site. [Au(adp)]

LAND AT BARTON LANE, CIRENCESTER***Land at Barton Lane, Cirencester***

Morton, R Cirencester : Cotswold Archaeological Trust, 2002, 28pp, figs, refs

Work undertaken by: Cotswold Archaeological Trust

Potential for Roman remains at the site was identified, with Barton Roman Villa situated in close proximity. An early medieval cemetery was suspected nearby. Potential environmental evidence associated with earlier water courses may also have been recovered. [Au(adp)]

LAND AT STONEWALLS, CIRENCESTER***Stonewalls, Cirencester. An Archaeological Desk-Based Assessment***

Stoten, G Cirencester : Cotswold Archaeological Trust, 2002, 24pp, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

The assessment identified five areas of high status building in the vicinity, one of which was located within the site. It was unknown whether they were separate sites or part of the same building complex. There was thought to be potential for well-preserved remains at this site, as a large part lay in the Scheduled Ancient Monument of Cirencester town. In general, the area was archaeologically sensitive. [Au(adp)]

LAND AT SYDE PARK, BRIMPSFIELD***Land at Syde Park, Brimpsfield. Archaeological Desk-Based Assessment***

Morton, R Cirencester : Cotswold Archaeological Trust, 2002, 25pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

The assessment was carried out to identify the implications of development prior to a planning appeal. Earthworks at the site were thought to relate to land boundaries but were undated and of uncertain origin. There may also have been a low potential for below-ground archaeological features associated with these deposits. [Au(abr)]

MANOR FARM, TEMPLE GUITING***Manor Farm, Temple Guiting, Gloucestershire. Archaeological Desk-Based Assessment***

Morton, R Cirencester : Cotswold Archaeological Trust, 2002, 26pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

The site, a Grade I Listed Building, was subjected to the assessment prior to landscaping and structural works in the grounds of the manor building. Surviving elements of medieval enclosure were thought to be represented by earthworks in the study area. There was further potential for medieval occupation next to the existing bridge south of the main pond. A mill was recorded on an estate plan of 1603, and there was thought to be potential for further remains. It was thought possible that unrecorded below-ground structures may have survived in the vicinity of Manor Farmhouse itself. [Au(abr)]

OLD MEMORIAL HOSPITAL, CIRENCESTER*The Old Memorial Hospital, Cirencester. Archaeological Desk-Based Assessment*

Stoten, G Cirencester : Cotswold Archaeological Trust, 2002, 23pp, figs, refs

Work undertaken by: Cotswold Archaeological Trust

Previous investigations at the site had pointed to Roman settlement and quarrying, likely to have been associated with the second phase of Roman occupation in the town. No evidence for medieval structures were present, but post-medieval remains were thought to have impacted on the upper deposits, although the Roman remains should have escaped. However, the basement of the hospital and an air raid shelter would have destroyed all remains. The site was considered more archaeologically sensitive at the eastern end of the site. [Au(adp)]

Watkins, K Gloucester : Gloucestershire County Council Archaeology Service, 2002, 30pp, pls, figs, tabs

Work undertaken by: Gloucestershire County Council Archaeology Service

An archaeological assessment was carried out on the proposed development site. Part of a Roman Road was identified across the tip of the site. Roman street frontages may be present in the area and excavations close to the site identified land boundaries, kilns and garden soil for the Roman period. The site is also expected to contain a late Roman cemetery, as a burial had been found previously on the site. Medieval occupation is expected as the site is just outside the Eastgate area and post-medieval occupation and civil wall defences may also have survived. The site lay within a wider area of known prehistoric and Roman settlement, although the study area itself was not known to hold evidence for this. The site was concerned with medieval and post-medieval land enclosure and field boundaries, although none were extant. A WWII heavy anti-aircraft battery was located in the area. Sewage workings prior to the study were thought to have impacted on the archaeology of the area. [Au(abr)]

The site comprised many buildings, although the Mill itself was singled out for the greatest archaeological potential. There were documentary references to a mill in the 16th century; however it was not known whether this stood on the same site or elsewhere. Indeed, the mill at the site has been greatly modified. Potential for the survival of earlier buildings was also recognised. [Au(adp)]

Stoten, G Cirencester : Cotswold Archaeological Trust, 2002, 20pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

There was very little potential for archaeological remains from before the medieval period. No medieval deposits have been recognised in the vicinity, although settlement in the surrounding area was known. The possibility of the discovery of an early phase of the medieval mill was not discounted. The remains of the structure of the post-medieval mill were more likely, however. A stone culvert at the site would not be affected by development. [Au(adp)]

WOODCHESTER PARK HISTORIC LANDSCAPE PROJECT

Woodchester Park Historic Landscape Project, Gloucestershire. Archaeological Desk-Based Assessment and Field Survey

Morton, R Cirencester : Cotswold Archaeological Trust, 2002, 51pp, colour pls, figs, tabs, refs

Work undertaken by: Cotswold Archaeological Trust

The assessment revealed that documentary references to Woodchester were known from as early as the 8th century, although the park in its present form was not established until the 17th century, and had altered very little since that time. There was thought to be the potential for the discovery of previously unrecorded archaeological remains at the site. [Au(abr)]
