Davis, B &amp; Manning, A Salisbury : Wessex Archaeology, 2002, 18pp, figs, tabs, refs

*Work undertaken by:* Wessex Archaeology

The study area has been shown to contain a high potential for significant archaeological remains. Three separate sites have produced Anglo-Saxon grave goods and burials. The proposed work was expected to impact on areas of historic interest outside the study area, for example the driveway of the Listed Building, Hazelgrove House. Although the existing road had truncated the archaeological remains, it was thought that other significant deposits or features may still have been affected by further development. [Au(adp)]

Davis, B &amp; Manning, A Salisbury : Wessex Archaeology, 2002, 13pp, figs, tabs, refs

*Work undertaken by:* Wessex Archaeology

There was a small concentration of archaeological features, including part of the Fosse Way and a milestone. The undated mounds may have suggested possible prehistoric activity. What may have been a medieval mill was located in the impact area. These features would all have been affected in some way by the proposed development. [Au(adp)]

*Work undertaken by:* Wessex Archaeology

*South West Region*

The study area was shown to contain a small number of archaeologically significant features. The proposed development was thought to have a direct impact on small sections of the Roman Road (the Fosse Way), stream, ridge and furrow cultivation and one of the undated linear features. [Au(abr)]

Aerial photographs had identified a number of crop marks. A geophysical survey had only given weak and indistinct responses and did not complement the photographs. Given the lack of evidence, the archaeology of the site could be protected by the operation of PPG16. [Au(abr)]

Cottrell, T & Cox, P Hindon : AC archaeology, 2002, 28pp, figs, tabs, refs

*Work undertaken by:* AC archaeology

A ring ditch identified by crop marks was present in the development area. Other crop marks may have been associated with this, possibly suggesting a prehistoric date. The Listed Buildings in the vicinity would not be affected by the development. The hedge boundaries at the site were considered important.
