RINGSTONE-FIXBY RAW WATER MAIN RENEWAL***Proposed Rindstone - Fixby Raw Water Main Renewal. Archaeological Desk-Top Appraisal***

Bell, C Barnard Castle : Northern Archaeological Associates, 2002, 19pp, figs, refs

Work undertaken by: Northern Archaeological Associates

The assessment identified within the study area, scheduled monuments of a cairn field and the 'Ring of Stones' cairn, both on Ringstone Edge Moor and Slack Roman Fort. Evidence for human activity from the prehistoric period through to the post-medieval was recorded along the proposed water main route. Prehistoric activity was identified in the form of a burial site and find spots. The water main route was also identified as crossing a Roman Road leading to Slack Fort. Medieval and post-medieval settlement patterns relating to agriculture and industrial exploitation were also identified. [Au(Adp)]

Dennison, E Beverley : Ed Dennison Archaeological Services, 2002, 19pp, figs, refs

Work undertaken by: Ed Dennison Archaeological Services

A total of 13 archaeological site were identified within the 1.5ha study area. One feature was noted on the aerial photographs had been destroyed, but the remaining sites identified comprised of sections of drystone walls, various items of furniture, small quarry scoops, a possibly building, a former field boundary, a revetted field track, and a small cave or fissure. It was also possible that the cave was a temporary prehistoric occupation or shelter site. [Au(abr)]

ESHTON HALL, GARGRAVE***Eshton Hall, Gargrave, North Yorkshire***

Elsworth, D Lancaster : Oxford Archaeology North, 2002, 36pp, colour pls, pls, figs, refs

Work undertaken by: Oxford Archaeology North

The hall was built between 1825 and 1827. It is know to have replaced an earlier Georgian house. There is some evidence in the courtyard to the rear that parts of the earlier building are still in situ. It is recommended that a Level II-type survey of the building be carried out. Gates Hill Camp, Nidd Gorge, Knaresborough, North Yorkshire: Archaeological Earthwork Survey

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2003, 25pp, colour pls, pls, figs, tabs, refs

Work undertaken by: Northern Archaeological Associates

Gates Hill Camp is an unvallated Iron Age hillfort located on a promontory overlooking the River Nidd. A topographic survey was conducted to assess the extent and condition of the surviving monument in order to provide a basis for the future management and conservation of the site, and to establish a baseline for further archaeological research. OUSEGATE/SHIPYARD ROAD, SELBY***Ousegate/Shipyard Road, Selby, North Yorkshire. Report on an Archaeological Desk-Top Study***

Evans, D York : York Archaeological Trust, 2002, 19pp, colour pls, figs, refs

Work undertaken by: York Archaeological Trust

The study showed that there may have been settlement in the area from as early as the 2nd century. This was likely to have continued through the Anglo-Saxon and Anglo-Scandinavian periods, and there was no doubt that Selby has been of local and regional significance since the 11th century. The study area was shown to be active in river trade throughout the modern and post-medieval periods and probably the medieval period as well. It was thought possible that significant remains of other periods could also be present as well, and to this end further archaeological investigation was recommended. [Au(abr)]

HUTTONS AMBO TO EASTHORPE COTTAGE AND BRAYGATE STREET***Huttons Ambo to Easthorpe Cottage and Braygate Street Water Main Renovation***

Northern Archaeological Associates Barnard Castle : Northern Archaeological Associates, 2002, 16pp, figs, refs

Work undertaken by: Northern Archaeological Associates

38 archaeological sites are within 250m of the pipeline route. The sites include a group of five Bronze Age round barrows, findspots of prehistoric flint, and a Roman Road with an associated cist burial. However, the majority of the sites comprised the remains of field systems, ridge and furrow and a number of stone quarries of medieval/ post-medieval date. There is also a spring, a well, a series of ponds and four list buildings. The impact of the pit excavation on archaeological remains is thought to be minimal. [Au(abr)]
