BROOK FARM, HULCOTE***Brook Farm, Hulcote, Bedfordshire. Archaeological Desk-based Assessment***

Meckseper, C Bedford : Albion Archaeology, 2006, 20pp, figs, tabs, refs

Work undertaken by: Albion Archaeology

No remains have been identified within the proposed development area for any period prior to the Norman Conquest. Furthermore, the evidence from the wider study area was virtually non-existent for the prehistoric and Roman periods, suggesting that there was a low likelihood that the development would affect any undiscovered remains from these periods. Saxon settlement in the area was attested by place-name and documentary evidence. This meant there was moderate potential for the discovery of previously undetected (and possibly quite significant) Saxon remains within the proposed development area. A possible medieval moat was recorded at Brook Farm itself. [Au(adp)]

Cox, C Cambridge : Air Photo Services, 2006, 34pp, figs, tabs, refs

Work undertaken by: Air Photo Services

The study area contained a Scheduled moated site of Someries Castle, which was clearly visible as an upstanding earthwork, particularly on aerial photos taken in the 1940s. The study area also contained buried ditches, a subrectangular enclosure of possible Iron Age or Romano-British date, which may have been more extensive than shown by fragmentary cropmarked features which were visible on the occasions they were photographed. Twelve other areas of possible archaeological interest were identified. [Au(abr)]

LAND AT ST. JOHN'S BUSINESS PARK, HUNTINGDON

An Archaeological Desk-based Assessment of Land at St John's Business Park, Huntingdon

Taylor, J London : Pre-Construct Archaeology Ltd, 2006, 34pp, figs, tabs, refs

Work undertaken by: Pre-Construct Archaeology Ltd.

Due to the lack of previous archaeological fieldwork in the vicinity of the subject site it was difficult to be precise regarding actual potential at the site. The HER and fieldwork at Northbridge Park were at some distance from the site. At best, therefore, it was considered that there was little possibility of finds or features of post-medieval and Saxon date, some possibility for finds and features of prehistoric and Roman date, and some possibility for finds and features of medieval date, if the St. Margaret's Leper Hospital or its burial ground were present. Heppell, E Chelmsford : Essex County Council Field Archaeology Unit, 2006, 33pp, figs, tabs, refs

Work undertaken by: Essex County Council Field Archaeology Unit

The study area was located in an area of archaeological potential, although it was difficult to identify specific areas of archaeological interest other than those relating to industrial and military/defence remains. There was a single Scheduled Ancient Monument in the area and seven Listed buildings. There was the possibility of the presence of material from the Palaeolithic period to the Second World War. The archaeological mitigation strategies would depend on the assessment of the potential impact of specific proposals. [Au(adp)]

BUILDING 9, GSK, WARE*Building 9, GSK, Ware, Hertfordshire*

Williams, J Hertford : Archaeological Solutions, 2006, 35pp, figs, tabs, refs

Work undertaken by: Archaeological Solutions

The proposed development lies on the periphery of the Roman settlement at Ware, which straddles Ermine Street. Previous excavations at GSK had investigated the Roman vicus, or small town, which grew up along the Roman road of Ermine Street. The settlement appeared to have comprised industrial and domestic activity together with a possible shrine or temple sited on the course of the road and extending for some way into back plots. The concentration of Roman burials, on the east and west sides of the small town delineated the limits of the settlement. Numerous investigations at GlaxoSmithKlein helped to define the Roman settlement as well as locating more limited evidence for prehistoric activity from the Mesolithic, Neolithic and Iron Age periods. Rouse, C Milton Keynes : Archaeological Services & Consultancy Ltd 2006, 29pp, colour pls, figs, refs

Work undertaken by: Archaeological Services & Consultancy Ltd.

The assessment highlighted that archaeological remains were not known in the vicinity of the school, largely because of a lack of fieldwork in the area. Historical sources indicated that the site had been occupied since the medieval period and the possibility of the survival of archaeological remains of the medieval and possibly earlier periods could not be discounted. The construction of the 18th century house and 20th century school buildings will have caused some disturbance, but the areas untouched by modern development were considered to offer medium to good potential for the survival of archaeology. Work undertaken by: Norfolk Archaeological Unit
Two features within the pipeline route impact corridor were identified. These were the possible sub-surface remains of a north-south post-medieval roadway, and the boundaries of the Grade II Listed Barningham Park. A number of other Listed buildings and archaeological features were located within 500m of the proposed pipeline but none would be affected by the works. [Au(adp)]

BRIDGE HOUSE DAIRIES, WORLINGTON ROAD, MILDENHALL

Bridge House Dairies, Worlington road, Mildenhall, Suffolk - an archaeological desk based assessment

Doyle, K & Grassam, A Hertford : Archaeological Solutions, 2006, 61pp, colour pls, figs, tabs, refs

Work undertaken by: Archaeological Solutions

An archaeological desk-based assessment revealed that there were no known archaeological remains within the site itself and no earthworks or standing archaeological remains were visible on the site during the course of the site visit. The post-medieval and modern cartographic sources consistently recorded that the majority of the site remained part of an agricultural field until at least 1959 and likely remained so until the construction of the dairy in the 1960s. A range of farm buildings or cowsheds were built in the north eastern corner of the site at some point before 1884 and a rectangular structure was constructed during the early 20th century. It was likely that the structures on the frontage were associated with bridge house and that the site formed part of a farmland estate associated with Bridge House. Borehole data indicated that the site had been truncated and no former land surfaces or subsoil horizons appeared to survive. [Au(adp)]

PROPOSED QUARRY EXTENSION AT MARSTON PIT CAVENHAM

Archaeological Desk-top Assessment - an assessment of the potential for impact on archaeological deposits as a result of the proposed quarry extension at Marston Pit, Cavenham

Rolfe, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 18pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological impact assessment had been undertaken as a result of a proposed quarry extension. The site lay just above the floodplain of the River Lark and had a high potential of archaeological occupation for all periods. The development would also affect the setting of the Scheduled Ancient Monument, CAM 001 [the Black Ditches] and to do this it would require consultation with English Heritage. It was recommended that a programme of archaeological investigation, e.g. a geophysical survey, along the SAM and an evaluation would be included as a condition of the planning permission. [Au(adp)]

THE CENTRE, STOKE PARK, IPSWICH

Archaeological desk-top assessment - The Centre, Stoke Park, Ipswich

Rolfe, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 33pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The archaeological desk-based assessment was carried out at the site and although the site lay on a favourable promontory overlooking the confluence of the River Orwell and Belstead Brook and would have been an ideal settlement location, the construction of the 1969 shopping complex had a considerable disturbance of the ground so that the potential for survival of archaeology was low. THE CIVIC CENTRE SITE, IPSWICH

The Civic Centre site, Ipswich - Archaeological & Historical Desktop Survey

Boulter, s Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 28pp, colour pls, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

A desk-based assessment was carried out in advance of the sale of the former Civic Centre site and adjacent car park. It concluded that the standing building would have truncated any deposits of archaeological significance. The other two-thirds of the site had a potential for archaeological remains as it was used as a car park only. Saxon and medieval archaeology was likely, due to the known history of the town and map evidence. This would include the two known phases of the town's defences, the extramural road (Lady Lane), occupation evidence and possibly a small area of the Norman castle. [Au(adp)]

DUKE STREET, IPSWICH, EX-KENNINGS/SIXT HIRE CENTRE*Archaeological desk-based assessment - Duke Street, Ipswich, ex-Kennings/Sixt hire centre*

Sommers, M & Breen, A.M. Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 23pp, pls, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

A desk-based assessment was carried out and suggested that the site had low to moderate potential for deposits relating to the early prehistoric period with both Palaeolithic and Neolithic finds having been recovered in the vicinity. There was no evidence for activity from the Roman period. The early to middle Saxon period might have been represented on site due to development of Ipswich as a leading trading centre at the time. A medieval leper hospital was close to the northern end of Duke Street in an area that would have been the edge of the medieval town. The full extent of the hospital and its cemetery were not known. It was not until the post-medieval period that documentary evidence for dwellings on the site was found in form of the early maps of Ogilby and Pennington both of which illustrated standing buildings. Supposedly it was also the location of an air raid shelter constructed for the use of the workers from the nearby engineering works, but this had not been verified. [Au(adp)]

IPSWICH*Ipswich. Fit for the 21st century*

Sommers, M Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 18pp, figs, tabs

Work undertaken by: Suffolk County Council Archaeological Service

A desk-based assessment was carried out and the available archaeological evidence suggested that both sites had a high potential for deposits relating to the Saxon and medieval history of the town. However, such deposits were likely to be relatively deeply buried under a post-medieval build-up of material to a depth of at least 1m. [Au(adp)]

BAYLHAM NICKEL REMOVAL SCHEME*Desk-Based Assessment - Baylham Nickel Removal Scheme*

Atfield, R Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 18pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

A desk-based assessment was carried out and revealed that one of the most important of the known sites along the Gipping Valley was the Roman settlement and forts at 'Combretovium', a Scheduled Ancient Monument, which extended into the northern area of the assessment parcel. There was a conjunction of Roman roads and it was likely that one might have crossed the proposed development area. Other probable archaeological features included indications of prehistoric ring ditches or enclosures. The parcel of land had produced dense concentrations of coins, one of which possibly represented a dispersed Roman hoard. The proposed pipeline routes avoided known ring ditches but one of the pipelines crossed a major Roman road. [Au(adp)]

WEST SUFFOLK COLLEGE

Archaeological Desk-based Assessment - West Suffolk College

Caruth, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 86pp, pls, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

An archaeological desk-based assessment was carried out, and revealed no positive evidence of archaeological deposits although topographic and cartographic evidence as well as information from nearby sites suggested the possibility of surviving pre-medieval archaeological deposits in the western and central parts of the site. Documentary evidence suggested that the land was used as open fields since the 15th century until the construction of the barracks in 1878. A substantial archive survived relating to the barracks, although only the walls and the keep survived, as Listed buildings. An egg-shaped bed that could still be seen may have related back to a pre-19th century field name and could have been indicative of archaeological deposits in this area. [Au(adp)]

EUSTON FARM RESERVOIR

Archaeological Desk-top Assessment - Euston Farm Reservoir - An Assessment of the Potential for Impact on Archaeological Deposits as a Result of the Proposed Development of a New Reservoir and Associated Pipeline for Euston Farms, 2006

Rolfe, J Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 47pp, figs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The desk-based assessment involved several sources and identified a large number of archaeological sites known to exist in the study area. The construction of the reservoir was the most damaging element and it was possible to damage new sites previously not known. The pipeline was less damaging but passed through some sensitive archaeological areas. It was recommended to carry out a programme of archaeological work as part of a planning condition. [Au(adp)]

UNIVERSITY CAMPUS SUFFOLK, PHASE 1 - NEPTUNE QUAY

Archaeological desk-based assessment - University Campus Suffolk, Phase 1 - Neptune Quay

Sommers, M Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 28pp, figs, tabs, refs

Work undertaken by: Suffolk County Council Archaeological Service

The desk-based assessment identified that the site had a very low potential for deposits relating to the prehistoric and Roman periods. The development of Ipswich as a leading trading centre gave a low to moderate potential for archaeology for the early to middle Saxon period. It was not until the late medieval/ post-medieval period that there was documentary evidence for the construction of dwellings on the site (according to Ogilby and Speede's map) which was described as formerly being empty waste land suggesting that it was unoccupied during the medieval period and saw little activity, although later industrial activity could have been possible. 52 CHEDISTON STREET, HALESWORTH

52 Chediston Street, Halesworth: Documentary Report

Breen, AM Bury St Edmunds : Suffolk County Council Archaeological Service, 2006, 16pp, colour pls, figs, refs, CD

Work undertaken by: Suffolk County Council Archaeological Service

The desk-based assessment established that the James Calver listed as a journeyman clay pipe maker in the 1851 census for Beccles was not the same James Calver named in the 1868 directory and identified in Oliver Oak-Rhind's article as the possible builder and user of the clay pipe kiln at 49 Chediston Street. The suggested link between this production site and clay pipe manufacture at Beccles did not

exist. The adjoining property was, however, occupied and later owned by a Samuel Calver from about 1864. This part of Chediston Street was a collection of small cottages and houses mainly in the occupation of tenants with the owners living elsewhere. It was not possible to use any of the records considered for this report to identify either the owner or occupier of the kiln site at the period when it was in use. The OS map of 1887 and the title map of 1840 both suggested a property boundary between the kiln site and 52 Chediston Street and this was a strong indication that they were in separate occupations. Though this evidence in itself was not conclusive it did suggest that the kiln site did not extend into number 52 Chediston Street. [Au(adp)]
